Thread: [\[SYMLINK SHELL:\] _ GET ALL USER & DOMAINS & SYMLINK _ \[/WITH 1-CLICK ACCESS\]](#)

mObile - May 16, 2012, 2:40 pm

1-Click Features:

[GET ALL USER & DOMAINS & SYMLINK FROM SERVER]:

[GET DOMAINS & CONFIG SCRIPT]:

[SYMLINK FILE]:

+__?__+
[PROOF OF CONCEPT]:

This is a pretty EPIC .php shell for those of you that have trouble manually symlinking ?

Instructions:

Upload this shell to your already shelled website and then click on the users & domains tab, it will locate all the sites that are hosted on your shelled sever, next click on the "symlink" tab from one the sites hosted on that server and see if it will draw the config file from the server, same goes for Domains and Scripts.

REPLY, ..If you don't have this symlink shell, and I'll PM you the Link to it's creator.

Thanks for viewing my thread. ?

Update: 7-16-2017

This thread is 5 years old. You can now find the Symlink shell here:

I would love to get this bro! Thanks in advance :D

jongleurs - June 30, 2012, 5:44 pm

can i get this as well please. i'm tired of manually symlinking and even more tired of the minimum length post message that just came up a few words ago and for which i am making this in to a tediously wordy and overly long post rather than the short and sweet request which would have sufficed were it not for the stupid fuckwits who clog forums with their "me too" and "thanks" posts.

GrayScroll - July 1, 2012, 2:28 am

i would like a link please thanks in advance

hey frinds i symlink a site

everthing is ohk

but when i open any site which show in

User & Domains & Symlink]

all sites show but when i open its give

Not Found

The requested URL /sym/root/home/xxxjdfnmek/public_html was not found on this server.

Additionally, a 404 Not Found error was encountered while trying to use an ErrorDocument to handle the request.

Apache Server at <http://www.demosite.in> Port 80

any solution for this

its error in symlink ya any other problem

i use sym.php shell

if u knw how its wrk tell me !

Pottercypher - May 25, 2015, 12:46 pm

Thanks for the tutorial and kindly answer my symlink questions: Where can I download the latest symlink shell (2015 symlink shell) and which is the best symlink shell that is not detectable by most web servers? Which symlink script is the best? How do you bypass blocked or patched servers using symlink? Aside of symlink, which other methods or tools or shells or scripts that can be used to hack several websites on one server?

vbulden - May 25, 2015, 2:13 pm

Damn, That's pretty epic. Can I have a link? Thank you :3

Do I just Pm you to get the link ??

SH?D? - July 20, 2015, 1:54 am

can this be used for a penetration for a website?

?Syria - September 4, 2015, 4:25 pm

Can I have the link to it pls?

Tricks7er - September 4, 2015, 6:08 pm

Everyone stop grave digging this, if this site you want to symlink gives you a 403 or 404 there is almost no more ways to bypass it. This is what I use successfully for symlink, I symlink, find the config either Joomla or Wordpress, do a MySQL login on the localhost via the shell with the creds from the DB config and then add a WP/Joomla user, login to the site and add a shell.
<http://pastebin.com/LUET7hv8> and remember you can always just root the server and mass deface it.

shwazhere - September 4, 2015, 9:37 pm

can i have the link ?

i want this!! awesome :D

Learner Boy - September 5, 2015, 1:55 am
