Thread: [\[TUT\] Merging 2 exe files / hiding a virus in another exe](#)

evilpulpann - May 17, 2012, 3:39 pm

Hey, I made a tutorial that will allow you to hide your server into another exe (a program, a game, ..) . Your victim will open the exe, the program that you're hiding the virus in is gonna install, and so is your virus.

I hope that this helps, it's my first tut so I'd appreciate any feedback.

Step 1

Open "Run", type in "iExpress" and run it.

Step 2

next> ..

next>..

next> ..

This is of course optional, but it's more logical not to prompt.

next>..

server.exe: infected file

chosen exe.exe: the innocent program that's gonna hide your bad intentions

WARNING

I'm sorry this image is wrong xD

The install program should be our chosen exe, and the post install comand should be the infected file (server.exe).

next>..

next>..

Example stands for the file name you choose.

next>..

For all the rest just next, next, next, next

Step 3

Gratz. Your virus is now succesfully hidden in an innocent looking exe (games..).

?

A manual method of binding files which is seldom used. :)

Nice share though.

Arrakis - May 17, 2012, 6:24 pm

An interesting method for binding I guess, good work.

meetcool - May 18, 2012, 6:37 am

looks good and its something new for me
thanks for the share.

nitoh - May 18, 2012, 1:16 pm

i bind my servers always via iexpress.
verry easy and fast to do.

Yeah it is fast and effective, but many people don't know that it exists. So why not? :)

Oldschool Hacks - September 7, 2020, 1:53 pm

its very slow opening and doesnt open my exploit
