Utterly pointless. If one does not know how to create a simple HTML 'deface' page, he simply should stay off defacing.

And it's not a 'trash post', hence I'm suggesting people to NOT try this, and actually learn a simple-two-hours-markup-language.

Well I think this is pretty cool, I would say I am advanced with HTML, PHP and CSS howver this tool looks like it will make things a hell of a lot easier. I didn't try it yet though and I have never defaced, never really seen the point.
