Thread: [Open .HTML file in WebBrowser1 \(VISUAL BASIC 2008\)](#)

KvickaN - August 22, 2008, 8:22 am

Hey I need help opening a .html file in the WebBrowser1...

Heres code:

```
Code Private Sub OpenFileDialog1_FileOk(ByVal sender As System.Object, ByVal e As
System.ComponentModel.CancelEventArgs) Handles OpenFileDialog1.FileOk
    TextBox1.Text = OpenFileDialog1.FileName.ToString()
    WebBrowser1.Navigate("TextBox1.Contains")
    'Process.Start(OpenFileDialog1.FileName)I WANT THIS TO OPEN IN WebBrowser1
End Sub
Please help!
```

This might help you too:

I notice your url has spaces in it. This is the problem. Remove the spaces and you'll be ok.

OXY Wrote:I notice your url has spaces in it. This is the problem. Remove the spaces and you'll be ok.

I'll try that, gonna edit post soon.

edit:

No spaces in the .html file now but I gotta have it in "Program Files" cuz thats where the files ends up when installing the program. And if i can get that working it shouldnt be any problems having spaces in the .html files either.

New screen:

KvickaN - August 22, 2008, 8:34 am

Tried this too but didnt work either, so it must be a problem with the code...

[IMG]<http://i270.photobucket.com/albums/jj97/KvickaN89/untitled-3.jpg>[/IMG]

I think it must be another solution with this:

```
WebBrowser1.Navigate("TextBox1.Contains")
'Process.Start(OpenFileDialog1.FileName)I WANT THIS TO OPEN IN WebBrowser1
```

KvickaN - August 22, 2008, 9:17 am

Here's a more explaining picture, hope you understand now =D

Switch to Visual Basic 2005

JapaBrz - August 22, 2008, 10:11 am

this is not the right event.

the event to send the webbrowser1.navigate is in the button "open page" in command1_onclick()
so, put this in the onclick event of the commandbutton:

Code OpenFileDialog.ShowDialog()

 a = OpenFileDialog1.FileName

 If a <> vbNullString Then

 text1.text=a

 WebBrowser1.Navigate(a)

 End IfRemember: this is in the commandbutton click!

and about the spaces, i think the space is the name of the file, ill work but
is not recomendad cuz if u create a site(maybe someday)
the name cant have spaces.

cya

That was genius!

Although the "a" gets an error... :(

Anyway to fix that?

See below:

[IMG]http://i270.photobucket.com/albums/jj97/KvickaN89/untitled-5.jpg[/IMG]

Error1 Name 'a' is not declared.

JapaBrz - August 22, 2008, 10:48 am

declare the A variable in the class of the form like:

Public Class Form1

 Dim a As String

 blablablabla

```
End Sub  
End Class
```

```
Public Class Form1  
    Dim a As String
```

```
    blablablabla
```

```
End Sub  
End Class  
That solved it! Thanks alot man!
```

Much appriciated!

If you show the source of the html, there's a chance you can make it way more efficient
