Hide-Ip-Browser 2.0 Portable | 6.58 Mb

The ultimate hide IP address software. Find out how to hide your IP address easily. Hiding your real IP address is the only technique that can help you protect your identity while browsing the web. By using Hide-IP-Browser you can surf any Web Site, Web-based Email services, Newsgroups, Web Blogs and Forums using a different IP address.

Hide-IP-Browser protects your identity by replacing your real IP address with a different one. You will appear to access the internet from a different location, not your own. Your real location is never revealed. We are using proxies from different countries to hide your IP address. A partial country list from where you can get a new IP address is this: United States, United Kingdom, Israel, Canada, Germany, Japan, Netherlands, and many more.

Do you have a virus scan ? Since you have -6 and neutrals saying you are trying to infect hf members.

Reckz0r - May 21, 2012, 5:59 am

Thank you som much for the wonderful contribution!

cskdon - May 21, 2012, 7:28 am

You Are Welcome My Friend :). Oh ! 35 Characters :)
