Thread: [Hi can we overwrite data or insert data using SQLI?](#)

fred93 - May 23, 2012, 5:32 am

It just came in my mind that can we insert data using Insert into query??

or can we overwrite data from columns?? many websites have their large texts in columns... as i m a noob.. plzz let me knw if this is possible :)

Thank you

If you wish to insert data into a table with new values I believe the query would be like so:

```
INSERT INTO table_name (column_name1, column_name2, column_name3) VALUES (value1, value2, value3)
```

If you wish the insert data into a table by overwriting existing data then I believe the query would be like so:

```
UPDATE table_name SET column_name='new_value' WHERE column_name='old_value'
```

you can insert files into the database which can accessed

For that to be possible the file_priv command should work

You could also shell sites if the friv_priv command is working

eg: union select 1,2,3,group_concat(user,0x3a,file_priv) from mysql.user

Command used to Write INTO OUTFILE
