n0\$3ratu\$ - May 24, 2012, 10:15 pm

Since Monday 11/05/2012 i will withdraw support for all applications that are using EOF!
The following applications will NOT going to work anymore:
Client Mesh, all stealers and keyloggers that are using old stupid eof.

Vouch For This Product !

The crypter is alway 0/37 Detection rate,
The Support is always There to answer question,
The Scanner is just simply amazing,

On a scale of 10 I would give 10 obviously since Its alway FUD and Support Is Awesome.

Thanks,

Nexus.

Amazing program works like a charm i love it stays fud and its reliable! the owner is very nice aswell

Op-Jax - May 26, 2012, 12:58 pm

Review:

This crypter is one of the best crypters here features:

1-the most important thing in a crypter.. FUD 99% OF THE TIME

2-Updates are fast in less than a week

3-costumes service is amazing

4-u get the crypter once u pay

5-gui is amazing

6-simple 2 use

7-got much extra thins like Obfuscator,Remove padding,Binder,Icon changer,Assembly changer and more

8-all updates are found on the first

Ex Onlyh4ks Yhk E: 9-secure and really hard/impossible to crack

10-Much injection options

11-this crypter is simply.. AMAZING

Kaizuma - May 26, 2012, 1:02 pm

best crypter ever, works like charm and hasn't let me down. It delivers what it promises.

Never had any issues

10/10

Price is perfect.

opapatika - May 26, 2012, 1:08 pm

priceless and friendly support, frequently updated, no issues in month (maybe one, but got fixed after few hours)

big vouch!

lewisbraines - May 26, 2012, 1:20 pm

Awesome service added him on msn reply withing 3 mins and he got straight to the problem withing 5 mins. Very good service just what i payed for !

R.I.P - May 26, 2012, 1:24 pm

Great support, easy to use, and very reliable. I'd recommend this to anyone looking for an awesome crypter.

[RuN] - May 26, 2012, 2:15 pm

Great crypter right here, ALWAYS FUD, updated regular, works like it should,

The coder is a cool guy with great knowledge in what he has coded..

BUY this you will not regret it 100% vouch from me..

SuperJuan - May 26, 2012, 2:48 pm

I got this crypter for about a month - AWESOME!!!!

Works great! updated rapidly with great support!

Chief Ozowarac - May 26, 2012, 3:04 pm

NO Comment, Good Work Dude More Able.

Sanch0 - May 26, 2012, 3:35 pm

Very good crypter, well worth buying, Very easy to use interface and is FUD 99% of the time. Thank you N0s

mapleleafssuck - May 26, 2012, 4:38 pm

BIG vouch for this crypter

- Always FUD (actually 0/37)
- Very stable (doesn't crash on my slow computer--even IE crashes on my computer!)

Even goes up and beyond!

- Binder (binds your server with a picture or such and makes it FUD)
- Scanner (I save money not having to pay for online scanners!)

This is the full package guys, if you ever buy a crypter, buy this one! I own 3 other crypters and this one wins by a mile :)

JeromeMarshall - May 26, 2012, 4:48 pm

Good luck with this no\$! Like I've said in the past I respect the way you do business. I'm also pretty sure why you made the name "Data Protector" and changed to a new project. I'm sure most people don't get it, but it's very smart from a business perspective when you're selling a product like a "data protector". It's the same reason I named mine "TLTK".

This crypter has his own level called 1337ness.

Support is amazing. When skids flame you all day and you manage to be that nice to the next person needing help its a definite thumbs up.

About the crypter cant say a bad word.

I instantly bought lifetime and didnt regret 1 second of it.

Made the cash back the same day with ease.

Its always fud and you will be stunned like almost everytime u open the crypter it starts downloading updates to fix things.

I can tell its a 10/10 crypter.

Vouched.

Hesco - May 29, 2012, 1:09 pm

Vouch for my mate didnt know that you made a new thread for Data Protector. Its always 0/37 he always update it within few hours once its detected. GLWS man!

RangerDanger - May 29, 2012, 4:06 pm

Probably one of the best things that ever happened to me(on HackForums of course ;p), Its FUD all the time, its built in scanner is a must needed feature because i don't have to wait 3 minutes for novirusthanks scanner,and it influences people to stop scanning on leaking scanners.The injection features and persistence is spot on amazing.

Zalg0 - May 30, 2012, 10:29 am

3. Tells me to go fuck myself.

Binder didn't work one time and he kept denying me (calling me a fucking moron meanwhile he is the moron here) that it did and when he came onto my computer to check he looked like a dumbass when it didn't work.

I asked if I could get the crypter onto my Laptop instead of desktop and he did it (said he did I didn't

get to check) then asked if I could have the download link again because I wanted to download it on my Laptop instead. Told me find a way to get it and I asked if I could upload it and give me the response "I'm not uploading it." I was going to upload it myself wanted to get a answer if I could, then he told me I was wasting his time and goes offline on MSN so I wrote "Fuck you" and he banned me from his product.

You aren't suppose to get mad at a customer when their asking questions . Your lucky I bought your product in the first place.

Overall rating on this crypter 4/10 (layout is ass backwards)

There are many better crypters on the market then this one.

I don't care that you didn't advertise that it was working with predator (even though its in your thread). I want a refund because the "REFUND POLICY" on your site says that you will give a refund within 24 Hours of purchase guaranteed.

I want a refund because I am unsatisfied with your product. What else is the point of the guarantee on your website??

Great support from the coder, not that you need it very often works with most things I've tried to crypt! Must be about my tenth Crypter now and certainly the one I'm most impressed by, crypted over 30 files so far (a couple each day) over the last couple of weeks and every ones been FUD. How does he do it??? I don't know but keep up the good work on a superb FUD crypter!!!

Vouch for this Crypter and its creator. I recommend you guys should buy this crypter with life-time access. I'm telling you that this Crypter makes my server stays FUD over 3 weeks. In fact i have 4 different cryters including this one, these other 3 only make my server stays FUD for around 2~3 days. Once again, you guys should buy this crypter if u're planning on spreading ur server/bots for a long time :)

Alright, here goes for my man!
This dude has the awesomest crypter AND service off all time.
Bought it two weeks ago, constant FUD.
Then I had to reinstall my system due to a system failure and
this guy reactivated the crypter without question.

N0\$, YOU ARE THE MAN!

I can't honestly say that if I was selling my crypter to the public, I would sell to anyone that's offering a crypting service. It wouldn't make me feel comfortable because it's a lot of work to keep the product top notch. It's not worth the risk of someone sharing it like crazy and making my life harder. There's paying customers that want a good product as well, and that's not worth the risk either. The inability to understand that's questionable.

I bought this software this morning and have had a chance to play around with it. I have to say, I am extremely happy with the result. As someone who has been involved in the scene for a very long time and is just returning to it, it's vital to me to have tools that work and do what they promise without endless hassle and unnecessary complications. This software is as good as it gets, does the job effectively and has great support and fast service. Most alternatives pale in comparison. What more could anyone want? Buy it!

Thanks for all your hard work and effort n0\$f3ratu\$:)

Not sure why he acts like this (seller).

Just an advice for the future.

Before adding someone on msn or whatever to purchase something make sure you know what you want.

Great products deserves great value. Great Vouch and respect. I am an happy customer and still living with that glory of being a partaker of this wonderful Crypter. Today i bring our way my observation. having used this crypter for quite some long time now, i have come to notice this. Most of this scanning sources and sites, if not all, can not be trusted. I crypted a server and did not scan and it has remained FUD till this day! I just scanned today and found its still FUD. I will check again tomorrow and let us know. I will advise we stop scanning. We know its already FUD once updated. Any scanned crypted server never stay FUD for too long.!!! I have experienced it. Dropbox uploads your server to the web and spreads to various third parties and they mess up your server. Try this and you thank me! more credits to n0\$f3ratu\$ GREAT DEVELOPER!!

Question about your payment processor Avangate. Does it require to go though ID verification?

Because I'm planning buying with an anonymous prepaid Mastercard and put fake name and address info.

It works great with Paypal. What about Avangate ?

90% you will be denied so you better look for something else because they will take your funds then they will do the verification.

If you don't come up clean they will refund you in 3 days, but as you said if is a prepaid mastercad they won't be able to refund and you will lose your money.

Honest Review:

I've used this for the past 2-3 months and I think that it is a very stable Crypter.. It has all of the basic settings that you need to work with as well as other advanced ones if you need them.. The binder works amazing and the scan function just helps me save extra time which I find very unique and user friendly. It is updated the instant it is un-fud which happens to be every 2-3 weeks at minimum.. Very good quality, 5 Stars. Bravo!

This program is THE BEST.Many many vouches for n0sf who helps you everytime.

Now i want to ask a question.I use Blackshades rat as my main and DarkComet as my secondary or backup rat if you will.My question is what will happen if a slave of mine deletes the .exe file i used to enslave him?

P.S Yes the file is crypted using the recommended settings of n0sf for BS and yes i have ticked the Add to Startup option when i crypted the file...

N0sf if it's against the rules of your thread to ask a question here feel free to delete...

Thanks

Hey n0\$, you seem to have one of (if not the) best crypter here!

Do you mind answering a few questions? You know, I'd like to buy it but I've had a bad experience with Cryptex (bought and project dead after a week -.-):

- In case I buy lifetime, would it still be valid in case you change your project? Like the upgrade that happened from No\$Crypter to DATA Protector).

- Will this project be kept alive for a long time? I guess? :P

Just protecting my investment, thanks for your time.

Been writing reviews for NO\$ since it was No\$Crypter, and I cannot say a single negative thing about it. The GUI is crisp, responsive, and uncluttered. The program itself does exactly what it needs to do, in the most efficient manner I've witnessed. I've never had a file come out anything less than FUD, and updates are still given out, even when not necessary. Literally flawless. Even larger than the program however, is the man behind the scenes. NO\$ and I have become good buddies through the time of me having purchased his crypter. People complain about the stupidest things when talking about NO\$. As long as you listen and follow directions, you're fine. 100%. Just don't be an idiot, and listen to what he has to say. I've had multiple questions, and what's absolutely amazing about NO\$ is that he doesn't make you go through other people to eventually get to him. You ask him your questions, and he responds, directly to you. I get my answers in an average of 15 minutes, no matter what time I ask. I've asked at 1 in the morning and 2 in the afternoon. NO\$ is an absolutely outstanding owner. Thanks so much for this awesome project NO\$, keep it up buddy!

I just Bought this crypter yesterday and received it within an hour and I couldn't be happier, This has to be the best crypter ever. I have been glued to my pc for the last 4days straight trying to FUD my server using HEX workshop, then i go and by this crypter for a bargain price of \$50. I can't believe how easy it is to use, it makes my BS server 100% FUD. it is super easy to use, There are no down sides to it. I strongly recommend it to anyone looking to crypt their server, I'ts definitely worth the money, I would've gladly paid \$100 for it. (not exaggerating)

JPhillips - July 26, 2012, 10:08 pm

This post is to hold my review of n0\$f3ratu\$'s Data Protector

n0\$f3ratu\$, just where do you get off? Making a functional, maintained data protector, with reasonable pricing, all the while providing ample attention to the needs of your customers? Just who do you think you are? If you all haven't realized by now, I have nothing but good things to say about his program, n0\$f3ratu\$, do not change a thing!

My personal experience started off with purchasing 1 month through liberty reserve, and I made an account on LR specifically for buying his program. This was the second data protector I've purchased (first protector I've used was "Entropy") and the first I've paid for, and I have no doubts that it will be the last I paid for as well :) Using it for the first month, I never had any issues using it, easy interface to use and I am speaking as someone who has never used programs of this type before, in fact I purchased this program during my second week of reading threads and beginning the magic of learning on this forum. The program is protected by license keys and having the program somehow "binded" to the one computer that it is used on for each account, no doubt to prevent leeching. But when I changed computers (twice), n0\$f3ratu\$ was always there to reset the program quickly so that I would be able to use it on my other computer without any hindrance. I now purchased a lifetime subscription from n0\$f3ratu\$ and have no regrets.

TL;dr - Good program, good creator, smith friendly, buy it

This looks a really good crypter, I will add you to MSN to arrange payment.

? ?nfinity ? - July 28, 2012, 8:22 am

My review of this crypter:

First when i bought it we had some trouble because he couldnt send it to my email, he fixed this really fast.

When i got it i had some trouble because i kept getting an error, firstly he asked if i wanted a refund but i refused because i wanted this crypter really bad, then he helped me on teamviewer and solved the problem(it was a problem on my end)

First impression: It has a really clean and proffesional GUI, easy to understand mainly because when you hover your cursor on a option, it will display what the option exactly does.

The crypter has alot of usefull functions, the main ones: choice out of 3 types of injection, Obfuscater, and a built in Element scanner(the Element scanner API)

I have been using it for 6 days now, and everytime i crypted it i got a FUD output, the crypter gets updated daily and the support is just awesome.

N0\$ tries to reply to his custommers ASAP and is very friendly, and always in for a talk.

If theres any crypter on HF which i would recommend to all users it would be definitely Data Protector.

I crypted my file yesterday and it was FUD in the first try.

With the most other crypters I have tried, you have to try different settings before you get the file FUD.

A BIG vouch!

To be able to use Liberty Reserve you will always need a exchanger.

Ask on HF for more details.

I agree with him completely,

This is the best crypter that you will ever want,

Just follow his little rules and it will be FUD for a long time, and it updates very frequently (like 3-4 times a week),

Full of every feature that you will ever want from a crypter to conceal and crypt every bit of info about your file,

I am very happy with it

Surely buy it you will never look for any other crypter ever.

Work with all versions of dc. And yes there is a file spoofer (change .exe to .jpg but it will be
NAME(exe).jpg) Just try fit it like mexe.jpg . If you spoof tho, obfuscator won't work (which is fine
since the crypter is always 100% fud) ?

<http://imageshack.us/a/img210/6452/paymentoptionsother.gif>

This Crypter is one of the best crypters I ever used: There are a lot of feature that makes it the best

1- The most important thing the Crypter is FUD 100% OF THE TIME and Updates are fast in less than a week.

2- The costumes service is more than amazing every time you need a help they always there.

3- Once you pay you will directly get the Crypter and it so simple to use.

4- When you first start your Crypter is updating automatically

.. and Alot more just find it yourself if Purchase this Crypter

Thank you

Problem !!

I was using Applaunch injection to crypt BS server, and everything was very great but when I do updating to old infected PCs, the updating is going to delete Applaunch file so the crypted server doesn't run anymore since it needs Applaunch file :(!

I just switched to itself injection to fix this problem but no point, after updating i lost infected PCs.

Any suggestions guys?

riskygambler - August 13, 2012, 8:34 pm

I've been using this for some time now.. It's one of the few crypters that I've felt is worth the money I spent on. It's updated quite often, sometime even when it doesn't need to be updated for detections. I also had licensing issues and he promptly helped me resolve it.

You dont even need to update them. The only thing that will be running on the slaves computer after a restart is the persistance modules+applaunch.exe, and neither of those will ever be Un-FUD.

Wait, could you please elaborate more on that? You wanna tell that it is enough to crypt the server once, infect the slaves and I don't have to care anymore because it will stay FUD forever? I cannot agree with this. Please explain. Isn't that Anti-Virues are updated frequently to be able to detected viruses and therefore every crypter has to be reFUDded regularly? Even if you run Malwarebyte's Antimalware you can get rid of almost any infection, which means that you have to update the slave from time to time?

Please correct me if I am wrong.

I can do it but then the output will be big.

I can't support this languages because of the encryption.

As you noticed (if you noticed) my stubs are between 26kb - 51kb.

If i change encryption to support those languages then the stub will be over 100 kb and is unacceptable for me, but i promise to look into it.

Just my personal opinion, I think 100kb for getting a whole lot of slaves is worth it. 1/2 of those people who I wanted to infect are, sadly, using those kind of PC.

You could add an option to support Korean using another stub. Let the customer pick what he wants.

It doesn't but it'll definitely take a while for giant files.

If you're planning to bind big files I'd recommend you binding them with Clesty Binder by DarkCoderSc and then crypt the Bound files.

There is a scan feature built-in the crypter, and it scan on <http://elementscanner.com> wich is safe, so normally it should'nt makes problems if everybody follows the instructions of this crypter

Great program!

I've used several different programs and this is by far one of the easiest and best around. I love that it caters to all levels of skills- being simple to use but offering some powerful features. I've been using crypters and rats for a while now so I like that there are some advanced features but one of the things that n0\$f3ratu\$ focuses on is being incredibly helpful to people that may not have as much experience. Even a beginner could use Data Protector.

After payment I received the crypter immediately and he stuck around to make sure it was up and running before logging off. After that I crypted my first file and it was completely FUD.

I was a big fan of the previous n0\$f3ratu\$ crypter and I'm a big fan of this. Definitely a huge vouch

TYVM n0\$f3ratu\$. Seems like you're the only developer that actually listens to the customers.

By the way, what key in the registry does your startup setting add?

My guess is the InteliTrace.exe file in AppData Roaming.

The reason I asked is, I want to run two different servers on each slaves' machines. E.g. Both CG and DC servers running on slave's machine. But the crypter doesn't allow to customize the setting for startup so it seems to kill previous startup and ends up running only one of the servers. Is there a way to fix this?

Thanks in advance!

Also very fast service.

Binary_Code - August 28, 2012, 1:42 pm

•A tiny review for those in doubt. •

After quitting RATs and such for quite a long time, I decided to return to it. But I had to get myself a new crypter for the sake of it. Being a customer of his previous crypter, [No\\$Crypter](#), I knew that he was legit. I found this thread and noticed that the author was [n0\\$f3ratu\\$](#). I quickly contacted him on MSN, asked him a few questions, and it didn't take him long to convince me to purchase it. He was very helpful and wanted to make sure that I had everything working perfectly. I launched the crypter and what a beauty, even prettier than its predecessor. I also noticed that it had some new features, while still being a simple-to-use crypter for those not so common with them. I hurried up and crypted my server and scanned it afterwards with the in-built scanner, which is also a great feature! It was fully undetectable and I couldn't be more satisfied with my purchase. The design of the crypter, his customer support, and the fact that I had no problems at all.

I thank you for providing us with such a great crypter.

And thanks for reading.

TL;DR:

- Great & fast customer support.
- Simple and sleek design.
- Awesome new features.
- Better than its predecessor.
- Purchase it!

You had 16 days left from 90.

You should have known how the crypter worked, what you should look for.

You said it is detected when actually is fully FUD.

I have slaves with all kind of av's.

Sorry but i don't want you as my customer.

EDIT: All this are fresh from last night as a part of experiment.

Alright guys.

It seems we can't open the application right now.

It has to do with the licensing server.

I will pm Aeonhack (the developer of the licensing system) about this problem and i will get back to you as soon as possible.

Until then please be patients.

Thank you.

n0\$f3ratu\$ - August 30, 2012, 10:11 am

I just receiver word from Aeonhack.

Quote:There is emergency maintenance and everything is expected to be up and working again within 24 hours (hopefully much sooner than that though).

Worst case scenario, I'll migrate to a new server and it will be up again within 24 hours, but some people may not be able to connect right away due to DNS issues.

I thought yes. If I buy an encrypter I would like it to be FUD as long as I use it, and if I buy a lifetime subscription I kind of expect it to be updated on a regular basis so it doesn't become stale and detected. Is that true in this case?

Seems like a good crypter, if your paying with paypal and using the auto processor it is a real bitch to deal with.

You have to send them all your info and it takes a bit for them to confirm it all.

I asked for a refund but getting the product is really a big pain in the ass.

Not saying it's a bad crypter though.

I suggest paying with Liberty Reserve

This crypter is my favorite crypter. It has always given me a FUD server.

I use it together with Cybergate and Darkcomet. In the settings I choose add to start-up and melt file and crypt and I'm good to go.

I don't need to think about which settings I have to use to get it to work, it just works.

I strongly recommend using this crypter!

big vouch for the big brother amazing product DATA PROTECTOR.. i i sent payment to his LR within 10 mins i got the product from him. its easy to setup by following readme file cuz of complete details with photos of how to setup. that is nice and easy for people like me. i have some questions i sent pm to him he get my tv and answer everything live . cleared all my doubts. and most important thing is, he teach me many things beyond the product which is not his even though its not his responsibility to answer those question .but still he answerd and explain and even show me live how to do those.. that is the amazing part of n0\$f3ratu\$... im happy i bought DATA PROTECTOR . after wasting my money with some other crypters here in HF.. i will defiantly extend my license as lifetime ... thank you so much n0\$f3ratu\$ for giving us a great crypter..

Fantastic program! Have been using it for a while now without a hitch. Works with cybergate and Darkcomet(Just minor quick changes in server behavior at the beginning...which has since been fixed.)

Frequent updates and decent Fud time. So far, all my files have been FUD on crypt, except the standard AVG .exe binding drop.

Great product, vouch and recommend it for anyone's use.

Thank you for the review but is FUD 100% for binder as well.

question :

the binder, you can bind a temporary file to it but when i do it nothing seems to even appear,

also: does the icon changer not corrupt anything?

You are starting to piss me off.

Read "How to troubleshoot the binded server" from the Readme file.

Are you so "smart" that you can't figure it out?

This is the last warning for you.

Yes it absolutely is, the only time it does not is when a non executable file is bound. AVG picks this
up. Bound to an exe I've never once had a problem. I just had to switch from binding to .bat to
compiling my own executables.

It's still technically FUD though...and updates are given almost daily. So props!

No problem buddy.
Now is perfect so enjoy it along with the rest.

northman - September 9, 2012, 1:35 pm

After looking at all the crypters/protectors on HF for a few days there was only one that everyone seemed to recommend, DataProtector.

I bought it soon after I checked out the specs, and as soon as I started using it I knew I made the right choice.

DataProtector has everything you would need, binder, assembly changer, icon changer, spoofer, 2 built-in scanners, and lot's of options for protecting your server.

In the week since I bought it, it has been improved with changes in the layout, bugs fixed, and had new features added.

Here is one the most important parts, it's still FUD since I bought it a week ago.

n0\$, fantastic job on DataProtector, glws!

**ps; thanks for fixing the assembly changer/file cloner, I was getting tired of using Reshack

Hello,

I am sure this crypter is #1 on HF right now.

My files are FUD for like 14 days now.

Support is 24/7 (and i mean really 24/7) answering any questions you have.

Updates are daily.

Crypter has everything you will ever need + price is pretty good for what it does.

Lalabye_Temp, I've been using this for around 1-2 weeks, and believe me when I say you won't find any protector close to how good n0\$'s DataProtector is.

The 'add to startup' works very well, and if you had issues with Bytes it's most likely to be your settings.

Just make sure that your rat is compatible with DataProtector before you purchase. The 3 most common ones are on the front page but it is compatible with more.

I can't. I will bring everyone to one year since the moment of purchase.

I already notified current clients, today or tomorrow hopefully i will change the thread as well.

I should have asked \$50 for 6 months considering the quality of the crypter and the time i put in every day to keep you guys happy.

If you do the math you will see is less then \$5/month.

it takes alot of work to constantly keep something FUD its a constant cat and mouse game against the AV companies. Therefore it's well worth it.

If I were you, I wouldn't be complaining. One year is an extremely long time, considering most crypter projects shut down well before then. Also, a lot of other crypters only give you 6 months for that amount of money. Cheaper crypters don't tend to be FUD as long.

Another FUD update, thanks for your hard work n0\$ - I'm sure I'm far from being the only person who really appreciates this from you.

unbelievable !

one question: did you test on line or off line ?

because most of the problems today came from cloud detection.

congratulations for your scanning on real antivirus on VM (like me).

Unlike others here who claim their servers as "fud" after scanning on online scanners ? (almost worthless today)

I have the old FC from BUNNN who can easily encrypt a server undetected from avast offline, but immediately detected when goes online (cloud detection).

If this crypter can bypass even g data and bullguard cloud then the author are probably a wizard since those av have detected anything I created even with offline scanning ?

Hey read the title of his threat:

?DataProtector??Bypass Kis, Avg, Mbam, Bit Defender?Binder, Icon Changer, Scanner?

Can you read the "Mbam" part, yes?

Why say it bypasses it when it doesn't?

And don't begin on that shit, that he can't delete posts.. of course he knows people who can do it from him here on HF....

I love you NO\$, you have by far the best crypter and customer on this forum. I've been using NO\$'s services since January of this year, and he is a fantastic seller and supporter, AS LONG AS YOU LISTEN.

"If you encounter any bugs, no matter how small, please PM me on HF, MSN or SKYPE and i will try to solve it asap."

PM. Private message. Not post random shit on the sales thread to eventually get 5 fucking pages of worthless spam. Learn to read and get a life kid. Oh and with the hate thread you created, you see how many people are standing up for the crypter? If you had PMed NO\$ after he told you you had 4 hours maybe things could have gone differently, but instead you insist on posting your problems on the sales thread when you are clearly not supposed to. You deserve it mate.

DP is a great protector that is FUD for very long periods, with lots of features and an intuitive interface, built-in scanner, it's updated continuously, and the support by n0\$ when needed has been great.

You can read all the many posts by happy customers in this thread! You won't be disappointed when you buy this protector!

Like anything you buy just follow the instructions in the read me, and if you do happen to need a tutorial you can find one [here](#) (as you can see, it's very simple).

If you have any bug to report or other support you need, just PM him and he will help.

And for mine and others comments on the recent sale bashers, and their thread you can find below in the spoiler;

DataProtector is still FUD now and was FUD during the time they claimed it wasn't, you can read the previous posts in this thread as well the ones in their thread for other peoples scans which casts much doubt on their claims (proof; [here](#) and [here](#) and [here](#) - plus a video [here](#))

1. Compatibility, FUD time, support.

2. My crypter already have too many extra features.

Of course you can find crypters with "40 extra features" :cough:, but a crypter should be only browse and crypt, nothing else.

The ones that advertise they have 40 working features.. 1.) they are full of shit and 2.) they care only to make money and nothing else.(that is understandable).

3. If you don't know what a crypter does then is maybe is better to start with a free crypter then with a paid one.

I agree on the third point.

Please learn the bases before buying a crypter, it will be easier for both. You can do your searches and learn using a free crypter. Support it's hard to handle. You can't expect a coder to set up your rat.

lol what?

Haters?: there are like 5 and they are people who broke the T.O.S and got buthurt.

lovers: there are HUNDREDS of vouches on 2 threads from happy customers.

Scam reports: Again invalid reports from people who got banned for breaking the T.O.S.

Nos and the crypter are both LEGIT 100% if you follow the terms of service and use some common sence there is and never will be a problem.

I bought this crypter and I will completely 100% vouch for it

This is one of the best crypters I've used

For some reason I removed the rest of this before I posted lol

The start up I think is great, I couldn't even figure it out when I ran it on my old laptop to test it
It's completely FUD, works great with Darkcomet and IPKiller

Honestly everything about this crypter is great, but I have one question

What the hell is the 'password' textbox used for, what does it do exactly?

Also, what's the reason for a 5 minute time limit on the program being open?

And lastly, what does the "Remove padding" option do?

This is the error I get on the slaves: <https://gyazo.com/1c9430df95511dc55e05886df62adc61>
It's a spam of this error..

And yes, they do have .NET, seeing as I used a .NET crypter before, and I sent them my DC server crypted with DataProtector, and it worked.

If asking for proof makes me an asshole then it's fine by me.

When you said "Idk what installing avg was gonna do to prove anything" proved me how smart you are.

Thank you for posting your opinion and I wish you good luck in the future with the other products you will purchase.

I don't know what is more important.

A people person (one that supports you even if you are wrong) or a man whose main objective is to offer you the best quality.

Here is the proof for AVG.

Spoiler ([Click to View](#))

Just so you know, if you would have taken the time and proved it to me instead of making me an asshole all this would never happen.

That is not true! There is a difference between being strict and being rude. No\$ is HQ in all his endeavors. He is always there for you as far as you are a customer. I think rules should abide always whenever making a purchase. Everything regarding the rules are stated. Follow the rules and you will see how wonderful a person No\$ could be.

mikeythemikster - October 10, 2012, 4:18 pm

Whatever I have the pm's to prove what really went down between the 2 of us. I only told him I had a slave that was running avg free that I kept losing using his crypter and his recommended settings al I wanted was advise or help and he immediately threatened to ban me if I didnt prove to him it was happening. I told him I cant prove it to you because I lost the slave and he proceeded to say i dont care prove it to me or i ban you. Than he told me to install avg free and show him over team viewer, i told him im not accusing him of anything or that the crypter wasnt working he then said again i dont care you have 2 hours to prove or i ban you. I had enough of the threats and called him an asshole and to go ahead and ban me.

Than he gives me negative reputation and told me he reported me for posting in his sales thread. Just thought people should know the truth about him. Also when I bought data protector i paid for a lifetime membership only to have him downgrade it to one year later during one of his updates. Buyer beware.

I have been using this crypter for months now and I can still say that it is the best and most reliable/stable crypter on HF. I occasionally have to ask a question on how to crypt a certain type of file, as I did today and I always get a fast and professional response. If you are thinking of buying this product, stop thinking and just buy it! Great product and great OP. AMAZING!

Counter440 - October 11, 2012, 5:13 am

This is for sure the best crypter on the market. I have tried more than 5 different crypters on HF over the years, I had problems with all of them. Dataprotector is the first crypter I have ed into that runs without a single error, the files arent half crypted, they are 100% FUD after crypting. I bought 1 year license because I know ill get what I pay for, and it`s worth it.

Not my bad if its 6/33 on element(Since I can't load dP ,I can't scan.) And also 6/33 on that scan4you .. (same for here). On meta-scan its 3/33 ?

I used darkcomet stub , tested with all cryption methods and the results were around 5-6 on element scanner / scan4you (when I could open DP).

I was just saying. ?

Rafe_D - October 16, 2012, 3:13 am

@ ibennz

In short. WOW!

Are you Joking?

Updates are that fast I guarantee you No\$ has Scan Watch alerting him to any detections on Stubs.

The stub is always FUD.

Try reading the readme file.

No\$ could have solved your issue in around 30 seconds after he responded to you.

You most likely had a detected .ico which is in no way related to the crypter. It's almost the only thing I have ever seen a detection from. Usually a dodgy .jpg icon, happens with many crypter's.

The stub is always FUD.

I've been using this crypter for around a Year and I rarely even bother scanning anymore because I know it's always FUD.

Instead I have an account with Element Scanner and I regularly check old crypt's just to see what the detection rate is. Some of them are quite impressive and I dont even Obfuscate. Just hit that crypt button and BAM it's FUD.

Oh and incase anyone didn't know, Meta Scan online distribute sample's.

@No\$

Thanks for the Kaspersky Video.

I enjoy finding program's I was unaware of in the background on your desktop.

Respect Mate.

And for those that dont no the item was very basic in features at the start but always fud -

So the difference now is huge - the time taken to where it is now has been years and hours of dedication
something alot of people would have no idea.

This is not about cost if you want a crypter on a price look elsewhere !

If you want a crypter that is always fud for over 10-20 days easy ! well look no further.

Plz pm me if you are willing. We'll discuss the terms.What do you mean go public? the Crypter wont go "public" N0\$ has been keeping up Data Protector for almost a year now and i still providing excellent support and FUD times.

I do not know any Crypter which offers the same as Data Protector for such a low price.

3radic8 - November 1, 2012, 4:41 pm

Hi, I'm here to share my experience with Data Protector. And I'm going out of my way to do it, because n0\$f3ratu\$ provided me an impressive support.

When I buy something, I expect it to at least reach my expectations. This software and it's owner have not only reached, but exceeded by far any expectations I might have had about any crypter on the market.

First of all, before choosing Data Protector I researched all the crypters that are being sold here on HF, and I concluded that, for it's price tag, this would be the best bet to get the job done. And I'm happy to say that I wasn't wrong. Most crypters available on HF are done by kids that don't even know how to code properly and are still learning. And one of the reasons why I chose this, was because of the seriousness of it's owner, n0\$f3ratu\$, which I perceived through reading his replies on this sales thread.

I picked a yearly license, because I'm sure that, if Data Protector itself doesn't stick around that long (which I doubt), it's because the owner will be providing an even better product. My product was delivered in about 5 minutes after the payment was done via Avangate.

Well, upon activating my license, I had a problem with Data Protector. My files were not getting FUD, just 1/35. After I sent a PM about it to n0\$f3ratu\$, he asked me my TV details to teach me how to do it right and get a 100% UD output.

He spent almost an entire hour with me, solving my problem, while showing and teaching me all the steps for any future eventualities.

He even tested my server on his own computer to see if everything was working after he found and fixed the problem, which btw happened because I was using it to crypt servers from the latest private version of Cybergate, and it seems that the files were not being packed with UPX.

This was the best support experience I've had here on HF, and it confirmed what I was already sure: that Data Protector is a top quality product and that it's owner is serious about what he's doing here. So if you're looking for a crypter that will surely do everything you need, with guarantee that it really will, even if you run into some problems and need help on it, this should be your first option to consider.

Thank you for all the help n0\$f3ratu\$. I won't wish you good luck with sales because I don't think this is about luck, but about product quality.

Good job!

Just figured I'd throw out a quick vouch. This is a great crypter and based on my experience I highly recommend it to anyone that is looking for an affordable way to keep their files FUD.

This is also an amazing crypter since it caters to nearly all levels of experience. It has features that benefit both newer and less experienced users and has powerful customization options that will keep more experienced users happy.

Big thumbs up and 10/10 for usability, FUD time and features!

I've tried a lot of crypters here and in other boards, but this is the only one with such impressive results.
And it's updated regularly !

Someone here complains about how no\$ "treat his customers".
Well, other sellers often just take your money, give you a shitty program wich is fully detected after 3 days, and disappears, no update, no support.
No\$ works hard and give us more and more undetected stubs.

Hi there,

I would like to carry on on our conversation thru email today afternoon.

I would like to use DarkComet as my rat and DataProtector as crypter.

With DC (v5.2) I create a stub with no settings. The only thing I change is the server id and server ip and port. At the end I check the UPX compress executable and I create the stub.

Then I protect it with your data protector. I choose the file from DC and while having turn off assembly cloner, injection method as applaunch, turn on add to startup I create the protected file.

When I send it to my friend he now have no problem receiving it. but when he open the exe file he got an AVG virus notification.

What do I do wrong?

Thank you in advance!

I think you're very very much mistaken, it has been FUD when you posted, and is still FUD now.

I had this product and complained about how rarely its FUD and that my lifetime license was changed to a 6 month license and I called him out on it and revoked my license, call me mad but that's a good reason to talk.

northman - November 10, 2012, 9:06 pm

You must be obviously doing something wrong, as I have files crypted since 13th and 28th Oct and are still FUD.

Also this is a sales thread, if anyone has an issue with their copy of DataProtector they should private message them to the seller/coder. Posting it here is against the TOS and can invalidate your

license and also be considered sales bashing.

If you read the thread, the news section in the crypter, the read me or the manual you would know that.

neverending - November 11, 2012, 1:41 am

I have been using this crypter for some time now. And never it failed my expectations, everything goes flawless when I FUD my servers. They are always undetected and the crypter is very easy to use since the creator of it made it user friendly. What I like about this crypter is that it immediately updates when it is detected and therefore I receive 100% FUD always. Next is the features of it, the binders and built in scanners are great so downloading other binders or checking up online scanners aren't needed anymore, but that's up to you. But for me everything goes well and great. Slick design and compatible to various rats out there. In terms of buying this crypter, the service was fast. And when it comes to issues or problems on the services, n0\$f3ratu\$ gladly helps. Cheers..

Amazing crypter, works great and i am a very satisfied costumer !!! Thank you :)

mkamka - November 11, 2012, 11:51 am

Sorry, if this is a dumb question, but if someone gets the most expensive option (1 year). Does that mean any exe that was crypted by it will remain safe for a year; even if antivirus definitions are kept up to date? How quickly would a paid customer know if their crypted EXE is no longer FUD (even if it's a 1/23 score)?

This crypter is the best in the world! So goood

Based on your comment i suggest you to use a free public crypter until you learn everything.

In no way start buying crypters until you learn everything there is to know.

Have a nice day. ?

mkamka - November 11, 2012, 12:45 pm

I've already tried a few free crypters. There isn't a whole lot to them; other than they're almost always detected by <http://vscan.novirusthanks.org> by the time I get a chance to use them. That's why I was asking about what advantage does this particular paid one offer, other than it is currently FUD.

"currently fud" is a pretty big advantage. Data protector is so popular due to it being reliably FUD while be very cheap compared to many other's offered on the forum. If you buy a 1 year subscription it means you keep receiving new stubs to continue recrypting your files. How long they stay FUD depends on your techniques of spreading, how subtly or obvious you are when sending commands via RAT, and just plain luck.

mkamka - November 11, 2012, 3:55 pm

I sent a PM to n0\$3ratu\$ yesterday. I never heard back from him. Is there a better way to get a hold of him to buy the crypter?

mkamka - November 11, 2012, 7:00 pm

Unlike most people here, I don't need a crypter to spread malicious code. I just needed a way to encrypt a couple of exe's so that they don't set of false positives. The only person running the encrypted executables would be me. So, I guess in hacking terminology, I would be the intended victim, and my server would be a completely legitimate executable. I don't intend to recrypt my exes regularly. Just once. I guess this wouldn't be the type of crypter I need. Thanks for your response.

Dear all,

I found this thread with a video tutorial explaining how to use DarkComet with Data protector:

<https://hackforums.net/showthread.php?tid=2964372&highlight=data+protector+darkcomet>

Do you agree this is the right way?

Dark Comet

- don't turn on "start the stub with windows" on DC,
- don't use any DC stealth and persistant function
- compression is UPX

Data Protector

- injection mode is "App Launch"
- do not use "launch on startup"

Cheers all :)

Taboo™ - November 17, 2012, 9:40 am

Have had this crypter since May this year and have used it almost daily.

Previous to buying this I had fly crypter (Complicated and outdated), Star Crypter (Five minuet wonder and dead).

Had Worries about buying from a hack site but purchase was possibe with PayPal and was easy and secure.

Recived Data Protector quickly and securely with easy to follow picture instructions for use with most popular Remote Administration Tools.

It has worked for me from first time I used it and every time until now with the exception of a couple of occasions when I needed support and the problem was my PC.

I have personally used with DarkComet 42F, 5, 52F, 5.3, CyberGate 1.07.5 and Cammy 2.0 all with UPX and all worked perfectly.

The interface is clean and easy to use with all the related functions grouped together and since I purchased this lots of new functions have been added and improved.

My files have been FUD every time I have crypted with it and has had regular upgrades and updates.

In the beginning I was crypting daily and updating but now I only update my servers when they become detected which is seven to fourteen days.

The built in obfuscator has for me made the the average FUD time of about ten days the normal and for me this is more than adequate for my needs.

Even when my files have become detected they have been by the less commonly used AV's first so not been a problem for me.

The persistence of the crypter is amazing and even if detected most AV's and users can not remove it without a complete reinstall of their OS I get a kick out of watching them try.

I used the built in virus scanners daily for checking the FUD of my files and its fast simple and keeps files FUD longer by being safe.

I must say for me the support for this is the best I have had for any digital product.

n0\$f3ratu\$ replied for my request to help within minutes each and every time I asked and went out of his way to help.

Even though the problems I experienced were due to my machine not his product he spent his time help me fix it.

He also refused to take any money for his help.

This says to me he is not a greedy person and is a helpful guy who cares about his customers.

Thank you n0\$f3ratu\$?

Great Crypter! Nearly always FUD (of course, the coder needs time to make it FUD again). It has a Binder and Iconchanger, and it works!!! So, what you want more?! :D

Sincerely
a happy costumer :D

Huge vouch for this crypter had it over a month and it stays FUD soon as its 1/35 or anything its updated asap and back to FUD and the support is beyond amazing i was having big problems at first and the owner got on teamviewer with me showing me how to do it and what settings to use with my RAT explained how it all worked and what i was doing wrong and got my RAT up and running smooth and 0/35 cant fuck with that xD lol but yea amazing crypter amazing support great owner.

Highly Recommend This Crypter!!!

Thanks!

~digital~ - November 24, 2012, 9:29 am

hi,

i have multiple questions about this crypter

- 1: can this crypted bind a cybergate server to an image file (.jpg)
- 2: when you set the binded file to run once, does this mean that it will only run once, or does it mean that it run if the crypted file was run by the user (when run from autostart it should not show)

3: i use cybergate 1.0.7.5 as rat, does it works with it, or does it have some problems like a black does windows or so on...

thanks a lot

Just make sure you're scanning your crypted server with his crypter and archiving your crypted file before you upload it onto ge.tt or any website that doesn't distribute malware samples to anti-virus companies. Dropbox does that, so it's not allowed.

n0\$ made this crypter, and he alone decides whether to sell it to someone or not, you can't force

him to sell it you.

If you or your 'friend' were denied deal with it and move on, instead of sales trashing and throwing a tantrum look at other crypters to purchase.

If he is not gonna sell I cant force him and I didn't, but going ahead to give me a negative reputation is stupid. He has the right to keep his crypter and I already got my friend another but he doesn't have the right to intimidate me with some stupid reputation.

I created and compiled a new project in Delphi 7 (simple Form with 2 buttons - only for test). I crypted my compiled file using AppLaunch + Add Startup method and I tested it on Windows XP SP3 (NET Framework 3.5 installed). When I run the file, it shows the error - message box with some informations and buttons - Send / Don't Send.

Why is this happening?

Greetings,

kirgeron333I think its the following problem:

It is a .net crypter and you created it in Delphi which are 2 completely different languages, i think Data Protector can only crypt .net and c# applications.

No, It worked earlier, but I tested it 3 months ago.

Data Protector crypt all applications, not only applications written in .NET.

Now is not working, why?

Wrong. .NET crypters can also crypt other programs, does not need to be .NET
If you want to crypt Delphi, go with xProtect, a C++ [crypter](#) which can do this.

I mean, just today morning itself my PC's main SSD crashed and so now I am onto laptop for a few days, will upgrade PC to a new setup and will be on it after 3-4 days.

He was far more than rude and uncooperative with me. I followed his rules of not asking for help in the sales thread and only scanning with his scanner and, when I finally had had too much of his rudeness and dishonesty and called him on it, he capriciously canceled my 3 month subscription after less than 1 month. Now, I'm going to tell everyone who I see might buy a subscription from him what a cheater he is. My negative reputation is entirely due to his response to my calling him what he is. Hi All,

I've been using this crypter for a few weeks now and i must say it is a great product. Always Fud. Update very frequent, good and fast support from n0\$f3ratu\$.

I'm very happy with this tool. One of the best i've never meet.

I used it for a few weeks now. I use it a lot. So here's my review (not a vouch) :

This crypter is updated very often. It's always Fud.

With this tool most of my servers keeps FUD for weeks.

The 3 method of injection gives a good compatibility with almost all servers. (for what i tried i always successfully crypted all (keylog, RAT, botnet), no breaks)

It have a lot of options. (more or less usefull, depends on need) I use only a few for my needs.

The built-in AV scanner is usefull.

Just one little thing that sometimes annoying me : the Timer ... 5 minutes and then close the crypter.

So to be Honest, it becomes my referent crypter. In my opinion, the frequent update makes the difference than others crypter.

FUD and it works great, no corruption on my file.

Vouch!

Dynamo999_eu - December 16, 2012, 1:47 pm

seems to be perfect. Does it work on blackshade? and which RAT do you recommend in general?

As long as you enable start up you're fine. It'll start with the computer every time.

Just remember to compress your server with UPX before you crypt.

You can do that on DarkComet and Blackshades. But for Cybergate you'll need to download the UPX compression program and compress the Cybergate server.

Already more than enough vouches, but I have to give NO\$ another one, he's an incredible owner with an incredible project. If you are debating for any reason whether or not you should get this crypter- GET IT. It has everything you can ask for and more. Truly remarkable. I even put it as my cypter example in my RuneScape Spreading Guide, because there's nothing else I would use. I've never once been dissapointed with the product or the owner. If you have a serious question that isn't answered in the FAQ that comes with the product, NO\$ will be with you ridiculously quickly.

Biggest vouch I can give!

AmazedMorons's Honest Review of Data Protector.

Crypter:

Always FUD every time.

Love the persistence + works amazingly

Binder - Works as it should

Assembly cloner - My favorite - Is epic when it comes to disguising your file

Obfuscator just adds to the FUD

Data Protector, Is always FUD.

Support:

I just had a problem and I was contacted immediately and I my problems were solved fast.

Overall rating: 10/10
