Thread: [\[FIX\] ABSINTHE 2.0.1: fixed problems when Jailbreaking \[FIX\]](#)

PedroDJ - May 25, 2012, 11:34 am

Hi people,

Jailbreak Dream Team has just released vesion 2.0.1 of Absinthe.

With this version I HAVE NO PROBLEM Jailbreaking my iDevice [Iphone 4 / Ipad 2]

Code Version 2.0.1

~~

- fixed a possible hang that could occur in certain situations

Version 2.0

~~

- first public release

[Download ABISNTHE 2.0.1 for Windows](#)

Thanks alot... buy my Cydia isn't working now. I can't download anything.

PedroDJ - May 25, 2012, 12:45 pm

Try to restart your device and then reopen Cydia: i'm using it right now on 2 iDevice!

Let me know!

Thanks for the heads up. It's about time lol. I can finally jailbreak my iPhone 4S! Woot!

?y??rion - May 25, 2012, 1:00 pm

Yeah, the tip you gave me didn't work :/

Ok: go to Settings -> General -> Reset -> Erase All Contents and Settings [WARNING: PERFORM A BACKUP from ITUNES BEFORE].

Once you have resetted the iDevice try to open Absinthe 2.0.1 and re do all the process.

Let me know.

Okay mate the owner off this thread, what are you trying to do/say? I have absinte 2.0 for iPhone 4s 64 GB I jailbreaked this morning with absinte 2.0 whats difference of 2.0.1? Fix bugs? Some apps cant be installed so strange.. do I need to restore and remove all my shit and re-jailbreak with 2.0.1? Or is 2.0.0. fine

Take care

Many many users [me too] had problems with 2.0 version, so 2.0.1 was released to fix the problems. That's all.

When I try to jailbreak it gets to starting jailbreak, the backup icon on my iDevice goes away, and it says took to long to connect to (something cant remember), then it says repairing. I can use it still, it just wont jailbreak?

Feel free to contact me for any help on iOS.

I think restoring through iTunes is still better.

I dont want to restore guys :(
I lose all my scores on my games.
JailBreaking isnt worth it to me now :(

InputEagle - May 26, 2012, 3:32 am

Watch out if you have an iPhone 4, apple just released an updated version of 5.1.1 with "Bug fixes". it's still unclear if it has anything to do with the jailbreak. according to ih8sn0w they made some changes in the dyld-caches. Absynth currently doesn't work on this new ios 5.1.1 for the iPhone 4. You can check if you have this new version by looking at the build number. if you have build number 9B206 than absinthe will work just fine. if it's 9B208 than you have the new ios 5.1.1 and you'll have to downgrade before you can jailbreak.

Perform a BACKUP from Itunes and then RESTORE or CLEAR ALL DATA: you should lost anything.

Add to Cydia this repository

1) <http://cydia.hackulo.us>

2) <http://repo.insanelyi.com>

Then install APP SPIDER & INSTALLOUS: with this two apps you can download all application for free :)

If you have problems, let me know :)

Try to use Cydia with your 3G connection and not with the WiFi: Cydia need to download all packages repo at the first start and you have to wait...

Absinthe 2.0.2 released
