Its much more behind the commands if you know what I mean.

I meant not for script kiddies relatively to what's going on the forum.

But alright, i'll give you that.

Unless you coded mIRC, then yes, it is a script kiddy tool, these botnets and their sources are really easy to find.

Kaiten's are not hard to handle let alone spread. I have been working with malware for over 7 years. 30 Linux OS isn't alot in my eyes. Compare my net to yours, to me it's pretty sad. If you can code you would develop and modify kaiten to autoroot + scan. :)

If you wanna buy it, i'll prove you whatever you want, untill then, this video should be enough for you.

Vouch for OP, nice to talk with and legit. :)
He setup my IRC Botnet very fast and helped me out with everything.
He also went first, did some testhits and everything worked fine.

For you who thinks it doesn't really take down the stuff, it does. :)

ebalvrot - June 4, 2012, 12:08 pm

Also you stated not for script kiddies ? Your fucking stupid, lmao. Your probably using some public ass script kaiten or knight.

Learn the definition, your just so stupid, its unreal. ?

He says kiddo in every other post, yet he cant even spell "jealous." I just find this hilarious.

ebalvrot - June 4, 2012, 12:57 pm

Just ignore him, he has a small botnet of some shitty ass VPS. Doesn't know how to run a proper botnet.
