Thread: [\[TUT\]how to get someone ip address when the victim is online on facebook or any other](#)

sayan162 - June 4, 2012, 4:58 am

3days back i asked here but they said that its not possible.But i found an simple trick to do that.See i am also a beginner so i don't have any right to post any tutorial.But this is trick for those who faced this problems.Ok here is the trick.....

just go to this <http://www.#/ip-grabber/index.html>

upload any image file,give password and email id and click to upload.

they will give you an unique link of your uploaded image file.

just copy paste the link when you are chatting with your victim on facebook[or any other site].

as soon as they click the link all access logs[ip] will be stored.

To view the recorded log for your image, enter image filename, folder name and password in the "Access image log" box on that site..

I am also new in this field so please excuse for any of my mistakes..thank you i love hackforums.net

It's just a simple IP Grabber you can make your own site (IP Grabber) too. It's very easy to make something like this.

Savez - June 4, 2012, 5:39 am

^ Also most HF browser booters' have this as a feature nothing really new but possibly helpful to new hacker's around here.
