Thread: [Purchasing New Rat Today please Help](#)

TooDizzy - June 4, 2012, 10:09 am

So i am making a purchase today of a new rat and crypter and it boils down to ethier blackshades or the Emissary Rat people are saying is better then bs what do you guys think! is blackshades what version ? also whats the best crypter out right now that is fud and kept updated on a regular basis i currently have cryptex but seems like they are having lots of problems on there end and i also have 2012 crypter which is ok but i need something that is going to stay fud longtime or atleast updated frequently

any help is greatly appreciated thanks guys!

About the RAT.

In my opinion blackshades is better choice. Ive never used or worked with Emissary, but from a personal experience I would say blackshades is what everybody needs from a rat. Has tons of features, very stable, 100% support and updates. I say nothing bad for emissary, maybe its good too, but definitely BS is one of the best!

American Apathy - June 4, 2012, 11:00 am

Surely BlackShades.

Always go with the one that isn't in a shitty .NET language.

Don't forget to check out: <https://hackforums.net/showthread.php?tid=2489645>

If you have any questions about the .net dependency then feel free to pm me.

The only advantage vb6 has over .net is the .net dependency. Otherwise, vb.net > vb6 anyway, considering vb6 is around 15 years old.

Considering once Windows 8 drops not supporting .NET 2.0 (which you all target) by default I'm pretty sure VB6 > VB.NET.

@OP I haven't used Stealth but it seems good. It would also be better than picking one of the .NET RATs.

Nope, my app allows the use of custom stubs so it'll be possible to choose the .net version required, and possibly supply an extra native executable that can be binded and will silently download and install .net if required.

It's simple, do you wanna spend money and hardcore spread a rat, or do you want one to just infect a few people? If just a few people download a public one like Cybergate, If you want to buy one i would recommend blackshades. And on the crypter issue in my op all the crypters that are selling right now are no good.

Wigan - June 4, 2012, 12:33 pm

Check my signature, look at how many vouches we have or you can also check our website out www.dimensioncrypter.com
Kind Regards

Once again.
No.

There are no decent crypters here, if you want a decent one that isn't developed by some .NET skid then google Open SC or find an underground board.

It's also the easiest to setup my friend. I'd go for Blackshades (;
what version is best right now i dont want to waste my cash =]

BlackShades NET or Stealth will do just fine, they're both pretty much the same just different languages. BlackShades NET has more features but Stealth has the ability to create your own modules. Stealth also isn't HWID locked and you wouldn't experience downtime if the BlackShades website was down. They're both a really good choice just browse the threads and see which one you like more.
