What you can do ? Well, I have make a deal with you for a totally private crypter, 100% FUD for the price of 150\$ [for having FREE UPDATES for lifetime: normal price was 120\$]: I have sent you 60\$ for starting the work, you have told me that the work will be finished in 24 / 36 hours.

7 Days are passed and I haven't received nothing... ops, sorry, you have sent to me a version of the crypter that wasn't FUD [1 / 37] and I told to you to work on it 2 more days.... those days are passed and I haven't a FUD CRYPTER yet.

You're accepting new works all days, gaining money: stop to accept NEW WORKS since you're not finishing the payed ones!!

Shu7down - June 16, 2012, 4:18 pm

I don't have what to say Mark !. If you are thinking to fuck up my business and think that I get my \$ from you, then go on :D

Pedono - June 17, 2012, 3:54 am

Shu7down and Mark aren't you both quite close to having something working here as per the original job description, it seems you've got some cross platform or dependency issues!?

@Mark you can't expect a refund because your expectations of the coder were too high, he's spent several days working on it all you can do is work with him to try and resolve the issues. I read the chat log you posted and I agree Shu7down was very unprofessional the way he handled the money side of things, however he's been scammed \$200 on exchanging this week and was probably broke and desperate for money (no excuse)

@Shu7down if Mark says it's not working on his machine and your still trying to get money off him as a finished project it's no wonder he's angry and trying to slam you as a shit coder... it shows your taking a lack of pride in what your producing, caring more about money then a good job.

Since on your front sales page you advertise a custom coded key logger all tools for \$100 + resell rights and you've had \$180 off him you're not really out of pocket if you accept that as final payment, but your reputations suffering from this because although it works on your machine you haven't resolved why it's not working on his machine.

I've worked with loads of freelancers before and the quality of work and communication varies massively but the fact is if you've agreed on something and the freelancers still happy to resolve any issues you see, then they haven't scammed you and you have to pay. It's your job as a buyer to ask for a portfolio etc to judge the quality of work they produce before the work starts, in this case It's your own fault if you had overly high expectations.

Personally I think Mark should apologize to shutdown for the remarks about his family and Shu7down should apologize for any unprofessionalism he's shown while working on this project, and you should both make the best of what's turned into a bad situation and get it fixed!
