First few minutes i was having issues with the updater but after i gave up seeing if there was an update i got it opened up and got to work.

The layout is awesome! simple and explained really well anyone could use it.

I had a little issue with the icon selection so maybe add a couple of .ico files into the pack as i had to find one from google to use.

Clicked crypt and within 3 seconds it was on my desktop crypted and fully working, although it did keep opening "my computer" when i run the crypted rat.

This crypter is worth every penny!

Ease of use 9/10

gui quality 10/10

looks 9/10

Here is a quick breakdown:

Review: Before buying, I was a tad skeptical and decided to contact him via skype, as soon as I added him, within 5 minutes he accepted me and the deal was underway. He advised me to use the AutoBuy feature, and I did so. Once the process was completed my crypter was working out of the box. Activated. I asked him questions, and he answered all of them. I scanned the EXE and ClamAV found it out of 32 other anti's however within 10 minutes the owner of this crypter pushed out a new update. Love this, HIGHLY recommended.

Snoepie1012 - June 7, 2012, 2:24 pm

Just bought this. FUD, working add-to-startup, no dependencies, lifetime for only 10\$!

Best product ever for that price, sir you have my vouch!

I hope you continue making updates when it becomes detected :)

Also you should add a pop up when you start the program to not scan it on virustotal etc.

Thanks for your feedback, and yes i will keep updating it as long as possible.

But don't want to embedd an annoying popup. i think the most people know to not scan on that.

Awesome to see another cheap crypter on the forum. Good luck with sales man looks very clean!

SpyNet v666 - June 7, 2012, 3:49 pm

I think you should make it more expensive to stop noobs who will buy and stop the FUD :(make it like \$25 lifetime or \$10 monthly and \$15 3months and \$20 6months and \$25 Lifetime..

Its a great crypter but don't ruin it:)

I like it.

S?Nk - June 7, 2012, 4:05 pm

This crypter is VERY awesome! It's coded in AutoIT which I haven't seen crypters in this for like 1 year and used to love them.. Highly recommended and indeed it's FUD this guy is awesome!!

LOL many people ask us to make the crypter expensiver.

But we will not.

We will realease an advanced version soon.

It will use an other stub and have some more features.

Price will be 25\$.

For those who own the Lite version it will be 20\$.

And i have theoretically infinifte possibillitys to refud the crypter if it get detected.

I actually change the stub often so it's nearly impossible that crypter will get detected.

So don't worry guys this crypter will be FUD for long time and will be regulary updated!

I hope you all enjoy this product.

So, why exactly is it this cheap? You'll most likely run into fudding problems soon.

Also... it is a runtime crypter, right?

Where did you code it in? What startup/encryption does it use?

That being said, it looks pretty nice. Good luck with the sales.

Its coded in Auto-It. You don't even need to use his startup, you can use your RATs or whatever startup.

Also i doubt that he will run in-to fudding problems, because Auto-IT is very easy to re-fud.

Everyone from CrypteX Lite is going to come here. It pretty much died a few weeks ago and it'll never be what it used to be when it first came out.

``What we need to decide as customers would be a cap for the amount of customers you'll be having in the future. This limit would, of course, increase the chance of people buying your product since it'll be kind-of a private crypter.``

Most of us know that CrypteX Lite hasn't been successful because they're security is breached and the coder is having some personal life things to deal with. He has about 850 customers that aren't happy, am I right? Let's look into the past of CrypteX for a second here. It was great, it was always FUD, the support was easy and well done through Skype usually. Teamviewer was also used for helping remotely. It was pretty much at this stage of Razor Crypter, and everything was perfect. But it looks like it'll be exactly like CrypteX if we don't put a certain limit to the amount of customers.

I hope some of you will actually understand where I'm coming from, and bear in mind that if we don't take action, the crypting market will have gone unreliable. Please do not take this as a threat as I'm only sharing this and see if I'm not the only one thinking that.

Thanks for reading.

TL;DR? : We should put a cap to the amount of customers you will be having.

I appreciate your opinion, but this is not like crypteX. This will still be FUD if we had 10000 customers, because it has a unique way of crypting it. Especially with a new method we just introduced, it is using a completely unique method. So even though I do appreciate it, you are incorrect on this. (:

Hi, don't worry about that. RazorCrypt is coded in a complete new way that makes me able to refund it within about 1 hour. I would be able to refund it even if we would have 1k users. I actually change the crypter more than 1x per day. We will stay FUD and we have very low chance to get detected. We actually use a new way to crypt and bypass antiviruses. I will not let anyone know what this new method is, but trust me. 99% of the AVs don't even scan for that. And those who do get bypassed too.

And please never do compare us with cryptex. it is completely different. I used it too and actually don't liked it. Kaspersky (bought version) detected the running files the whole time!

I spend many hours each day to make our product better and I will keep doing this.

So guys, don't worry RazorCrypt will ever be the same: Awesome!

Regards, TeamRazor

Also, sorry, my English is not too good.

It seems the crypter has some incompatibilities with Win XP (SP3).

To connect the crypter takes several attempts .. and after cryting servers as DarkComet (for eg.), these errors appear

ERROR: Exception ESocketError in calc.exe at 00060A13.
WSACleanup.
Another error is: ERROR: Runtime error 216 at 00404ABA.

Anyway, the servers do not work after being crypted.

If there is someone else with Win XP that wants to check it out .. However, please, coders should test the crypter on Win XP.

It would be nice that you guys solve this problem ASAP.

Thank you!

I don't run it in sanboxie, I run this on my own PC.
When I run in Sandboxie, process "dwwin.exe" appears and crypter do not even start ..

I had the same problem with another crypter and the coder solve the errors after an update.

I presume you are on Win XP? What is your service pack?

Vouch For this man :) GREAT seller and very quick !!!!

Riddick - June 10, 2012, 8:50 am

I just saw a scan result from someone who used NoVirusThanks. Stop scanning on NoVirusThanks, VirusTotal and Jotti because even if you check the "Do Not Distribute" box they distribute it anyway. Use MetaScan.org or other more secure services to ensure a longer FUD time for this crypter.

Remember, do not scan on VirusTotal, Jotti or NoVirusThanks. They are the worst places you can submit your file for scanning.

RazorRAT or -.Ebola.- you might want to put this in the original post to let your customers know

about those web sites. Also, why not edit your customers' HOSTS file to block these sites by default?

I'm just trying to help.

I didn't know that, but I think I have a right to post for three reasons:

1. You did not list any bot or rat that is compatible for your crypter on your thread at all.
2. It makes potential buyers aware of what works and what doesn't. I'm sure you don't want to be flooded with PM's of buyers asking you "Is this compatible?".

Nice Crypter
daily update and really easy to use.

I have crypted CyberGate and DarkComet 5.2
Both works properly

Probably the best service and crypter I have ever used.

Here is a quick breakdown:

Review: Before buying, I was a tad skeptical and decided to contact him via skype, as soon as I added him, within 5 minutes he accepted me and the deal was underway. He advised me to use the AutoBuy feature, and I did so. Once the process was completed my crypter was working out of the box. Activated. I asked him questions, and he answered all of them. I scanned the EXE and ClamAV found it out of 32 other anti's however within 10 minutes the owner of this crypter pushed out a new update. Love this, HIGHLY recommended.

>>Usability: 9.5/10

>>Support: 10/10

>>Price: The best. 10/10

>>My EXE Before Crypting : 277KB

>>My EXE After Crypting: 942KB

What is your error? If it says "HWID invalid" or something like that, just wait a few minutes. The autobuy system sometimes takes a couple minutes to activate.

DrewDrops29 - June 10, 2012, 11:34 pm

bypass is disabled, you are not using .net crypter settings, etc.

This cannot be made in C++/C/ASM, or you would not be selling it for so cheap.

Let me take a wild guess, VB6? Won't that be redundant/hasn't been supported anymore by microsoft?

If I buy this it will be the last crypter I buy on HF, forever. I'm a customer for over 5 crypters here and ALL of them have support/update issues. Even the seemingly professional ones. Can I be reassured somehow that this crypter will be truly updated within a week once it becomes UD and that it won't just die like so many others? I know there aren't any guarantee's but some reassurance from the coder would be nice piece of mind.

Can I be reassured somehow that this crypter will be truly updated within a week once it becomes UD and that it won't just die like so many others? I know there aren't any guarantee's but some reassurance from the coder would be nice piece of mind.

Hi, don't worry about that. RazorCrypt is coded in a complete new way that makes me able to refud

it within about 1 hour. The coder would be able to reFUD it even if we would have 1k users. The coder actually updates the crypter more then 1x per day. We will stay FUD and we have very low chances of getting detected. We actually use a new way to crypt and bypass antiviruses. We will not let anyone know what this new method is, but trust me; 99% of the AVs don't even scan for that. And those who do get bypassed too. For your information, the crypter is coded in AutoIT, which I believe is C; which is unique and makes it better then most crypters on HF. We know it has less functions, but there's the essentials and it will always be FUD. The Advanced version will come out soon enough with all the popular functions.

We are different from all those other crypters, the coder and its support team spend many hours each day to make our product better and we will keep doing this.

So don't worry; RazorCrypt will always be FUD whenever you'll need it.

Regards, TeamRazor

I'm glad you're buying our product. I have bought about 7 crypters here on HF, and I can say that this one is equivalent and even better then 50\$ crypters. Expect quality and fast support for a lifetime duration of the crypter, which will be many years from now on. ?

Yes, it is auto-generated. You may think it's less convenient but we make sure that you'll have a scan-time & run-time FUD.

(Jun 12, 2012 07:51 AM)xclusiffazn Wrote: [\[CITE\]](#) What's the execution rate mean and what is this coded in?

The execution rate is very high and it will remain high. The crypter is coded in AutoIT, which I

believe is C. Very unique and new way of crypting, and the results are impressive. Razor Crypter has never had one detection since a looong time.

I'm not sure if I understand your question. However, I can tell you that the execution rate is the ``percentage`` of times it will actually execute the server with no errors. We have a 100% rate (perfect). And there's nothing wrong in asking, everyone has to start somewhere! ?

xclusiffazn - June 12, 2012, 8:42 am

Yup, that answered my question. Last one and if the answer is yes, I'm buying. XD

The Blackshades FAQ's say regarding HKCU and ActiveX start-up:

"NOTE: Because .NET crypters do not inject into themselves, this feature will not work if crypted by a .NET crypter."

So the HKCU/ActiveX features should work fine when crypting with this crypter, correct?

Raz?r - June 12, 2012, 8:43 am

Indeed, Razor Crypter has no .NET dependencies, which is pretty rare in nowadays's crypters. You won't regret this crypter mate. ?

Use the autobuy feature on the first post, it is a bit glitchy so it'll take some time for you to get your license activated. It should be activated by the end of the day for sure though. Thanks for buying Razor Crypter mate and I can guarantee that you won't be disappointed.

Since your too Confident about your FUD time and i'm not trashing sales.

Why don't you crypt a file then put it on scan watch and let's see how long will the FUDness last.

It can stay FUD for days, we don't know an exact time. But we say it's always FUD simply because if it ever gets a detection, it gets updated.

Our crypter is 100% FUD, so the victim you'll infect won't know they're infected. Of course, you'll have to update your slave with a FUD stub because after a week or even months, it will slowly get detected. To get it FUD again, simply update your slave with a fresh FUD stub. There are scanners that actually emails you when it gets detected (1/44). Let me know if you need any more help in understanding this.

It happens to me the same.

I just bought 200 installs (DC 5.3) and only got 22 bots ..

My settings are minimal and did not even put the startup of the DarkComet (or persistence, because then it does not work).

You can probably spoof the file size of an executable with a HEX Editor. You can't compress it easily without gZip, winRAR, winZIP archives. It is the stub that has to be coded smaller, which is hard when the crypter is coded with quality.

The stub can stay FUD for over a month. Even if it gets detected, we'll know as soon as possible and there will be an update. It's been FUD since the crypter has been out. It is coded in a special way, a new technique that is coded in C.

umm, the stub does not stay FUD for a month. lmao.
Just cause you update it doesn't mean the stub stays FUD for a month. It just means you updated to a NEW stub.

It is coded in AutoIT. The coder said it once stayed over a year with only 2/44. I'm sure it can stay FUD for quite a while. We will give a free unlimited metascan scanner in the Advanced version as well so that there is less chances people scan it on VirusTotal or something like that.

Well you cant say a specific time, i dont know why crypter coders say this, you cant give out a time, you should give average infection rate before its detected. Because if i ran 10,000 installs on the stub a day it would be unfud in a day or two.

Sending support a PM on infection rate "issues". Was going to post it here but I'll keep it off the sales thread. I like this crypter a lot so far!

Raz?r - June 14, 2012, 9:48 am

I checked the infection rate:

I would say it's great :) about 99%

The versions 5.x.x has been glitchy for the update functions. You sometimes have to update them up to three times to get it all to work. That is why BS > DC mate.

Blackshades isn't native, and doesn't have rootkit functions or process persistence.

Darkcomet has 32-bit rootkit functionality, and process persistence. DarkComet is much better than Blackshades NET in terms of not losing bots, however Blackshades is better for other features.

No, it has this problem with all crypters. It isn't the infection rate because it is 99%. It is simply the update function that is very glitchy on DC.

You're quite right on that. The fact that some functions are glitchy for updating gives a view of DC that it is not too good. The 4.2 version is for sure very stable.

VB6 has COM dependencies. I thought of all people who'd post you would know that. I'm pretty sure Delphi is truly native if you don't use external DLL's with it.

No you cannot, HWID's are not transferable. We can work something out though please contact RazorRAT or Ebola and they can probably change your summer cottage hwid with your home computer when you're not there anymore.

I had a familiar problem, on the Crypter make sure you don't select "Run with start up" if you don't have a error message selected.

crypted files will not work on your own PC and VMs. this is for protection our costumers and keep as FUD.

Some AV companys will get insane because of that ;D

Don't worry it works good with BS (tested it and had no problems)

That sucks, I don't know if it works unless I can test it lol. Do you have a test install you could send my way?

Also, whats up with the startup app adding to start menu? Does it only do that for me when I run it or for everyone? Because if it does that for everyone it will give it away that they're infected.

And one last thing, how does not letting us run our own file keep it FUD longer?

NoodleBot™ - June 16, 2012, 8:23 pm

I am somehow able to test the crypted files on my computer, have been doing so. Is that fine? I don't have access to a VM and sandboxie is shit anyway.

2. I will not giveaway any test installs.

3. This is an actual bug i'm already fixing it. Once someone click on it, it disappears. So it's an app without any effect.

4. I will not tell you, but i have my reasons to do that.

NoodleBot™ - June 16, 2012, 8:27 pm

Edit - Even with UPX enabled, and on BLACKSHADES FUSION server, this works perfectly. And pretty FUD statistics agree.

(Jun 16, 2012 08:39 PM)NuuddleRow Wrote: [\[CITE\]](#) That's alright, thanks for letting me know.

I have one problem countering the above posts, however, I am able to run my crypted files. Is this

fine for me to do? I know how to disinfect myself and am experienced, so protecting me is an not an issue. Any words on this are appreciated.

This crypter is quite new and there are sometimes bugs. I'll fix all of them, but this needs some time. Also i embedded this feature a few updates ago (7 i think, wich is not much for this crypter, because i updated 3 times daily sometimes) and it's still in the BETA phase. It is embedded for testing now. I will decide in a few weeks about keeping this or remove it.

Also the first thing i concentrate on is the stub and keeping our crypter as long FUD as possible, i will ever first refud (wich i do even if it's not detected for making our chance to get detected very low) before working on the other features.

I do my best to provide you guys a HQ product and really hope to make you guys "happy" with my product.

If there are any bugs/issues with the programm itself please report them too me.

Thanks to you and all other costumers for using RazorCrypt. -TeamRazor

Well you're doing a great job and thanks for providing us with this crypter. Definitely happy with my results. Hope you can incorporate some new startup methods, or startup names, or even something like USB/RAR spread would be fantastic.

So far i'm 100% satisfied with this crypter. When I purchased it was 1/37 then literally 10 minutes later it got updated to FUD. Best crypter for it's price. Keep up the good work.

Yup, i wanted to mention too, theres added the icon to the Start menu, but i hope in next update it will be fixed. The icon is named Startup

Is this crypter supposed to be FUD Runtime? I didn't see it anywhere in OP's post so I assume it isn't. But if your advertising it as FUD runtime, it is detected by MBAM on runtime.

why are you forced to inject in to either calc or explorer.exe?, there should be a yes or no option :/

Drspinkles101 - June 18, 2012, 7:15 am

DrewDrops is Correct if we don't want to inject into processes there should be a None option and it should be set on None for default, Also you should do something about the huge ass stubs over 300kb for a stub is huge I understand you gotta do what you gotta do to get shit fud but you can keep it under 200kb and still have it fud. Also Upx Compression if someone has already compressed there binary with that it just corrupts the bot so take out (smaller stub size) and just put Compresses File or something. Some people are new to this and do not understand stuff fully yet, it will just cause problems for you guys in future. Also add a Anti's Option such as Anti-Sandboxie Anti-Vm ect.... Also make sure this has unicode support so this can work on asian computers.

1. Injection is needed, otherwise crypter is not runtime.
2. In auto-it, stubs are always arround 300KB due to the language.

Exactly. It's not possible to make the stubs more small.

I allready reduced it's size to the limit.

Also there are already Anti's, but they are activated autmoaticly.

I will not remove the UPX packing. If an user wants to use it he can.

if i buy the \$40 free upgrade pack do i still get to keep the lite one?

Golduck - June 20, 2012, 5:03 pm

Yes you do, that's included in the purchase.
