Thread: [Sockets - Emulate client](#)

ifans - June 7, 2012, 5:10 am

Code Imports System.Net.Sockets

Imports System.IO

Module Module1

Dim tcp As TcpClient

Dim net As NetworkStream

Sub Main()

tcp = New TcpClient

tcp.Connect("", "")

net = tcp.GetStream

tcp.GetStream.BeginRead(New Byte() {}, 0, 0, AddressOf Citaj, Nothing)

Console.ReadLine()

End Sub

Public Function Citaj()

Dim bajt(100) As Byte

net.Read(bajt, 0, bajt.Length)

Dim splitme As String() = Split(System.Text.Encoding.Default.GetString(bajt), "/")

Console.WriteLine(System.Text.Encoding.Default.GetString(bajt))

Select Case splitme(0)

Case "login"

PT("login|username|password")

End Select

tcp.GetStream.BeginRead(New Byte() {}, 0, 0, AddressOf Citaj, Nothing)

End Function

Public Function PT(ByVal podatak)

Dim bajt As Byte() = System.Text.Encoding.Default.GetBytes(podatak)

net.Write(bajt, 0, bajt.Length)

net.Flush()

End Function

End Module

I have deleted server IP.

I receive data, and when i send data, notihng happens.

Few seconds later, i get 1k empty lines in Console.

Why are you using a function if it doesn't return anything? :facepalm:

The prolem is that you are not listening at the xxxx port

Read first post again.

It returns data/code (random code which I get)

After that i send login data & that code, and after that nothing happens.

No, its not the problem, its client, not server app.

You don't say?
Post it here, I'll try to fix it

Look in first post. Its there...
Thanks

Hey, anyone can help me pelase?
Thank you very much

hoocrax - June 9, 2012, 6:55 am

Are you by any chance putting the port as string ? If I'm not wrong, it should be an integer :/
