Thread: [\[Preview\] S7 Crypter v1 \[Preview\]](#)

Shu7down - June 8, 2012, 3:50 am

So, I want to show you my new private crypter. I have almost finished it, and I may make updates soon, with more options and so. Here are some images :

Spoiler [\(Click to View\)](#)

Crypting Options :

Anti's :

Assembly info :

Icon Changer :

Binder :

Also, I added some animations on tab control, like this thread :

<https://hackforums.net/showthread.php?tid=2528073>, also Mavamaarten~ , helped me with that.

Do you have any Ideas, what should I add to, and is this looking okay, and HQ ? Also all the functions on the images are working fine, and the crypter is FUD and advanced . So what do you think people :) ?

PedroDJ - June 8, 2012, 3:53 am

Very good: asked for a private version ;)

Enjoy!

Regards

n0\$f3ratu\$ - June 8, 2012, 4:28 am

How many of your "anti's" are actually working ??? ?

The Mammoth - June 8, 2012, 4:29 am

On av's is impossible to kill them.... ?

Shu7down - June 8, 2012, 4:31 am

They all work good. Why ? I will be uploading video soon of this working, I'm just too busy to make it now :/

n0\$f3ratu\$ - June 8, 2012, 4:33 am

That would be nice.

Maybe in your video you can show us how you kill a av or bypass it.

For example BitDefender. ?

darksrc - June 8, 2012, 4:37 am

Looks very similar to Dimension crypter. Just saying, but other than that its nice

~Ultim8um ?

Shu7down - June 8, 2012, 4:46 am

Will create the video soon. Also, the theme may be the same to dimension, but this was looking very nice for me. Also, I'm too busy on he video right now, coz I work on 3 projects + gonna open hosting company tomorrow :)

I am telling you the method they are using not the solution. ? ???

eSp0rt - June 8, 2012, 5:35 am

Hi very good !

Add multiple encryption :-)

PolyStairs,RC4,DES..

:~)

Shu7down - June 8, 2012, 5:38 am

Yeah, I can add multiple encryption :) I can add much more thinks, I be doing that , and you may see this much more advanced, in premium sellers section :)

DELPHICODEZ - June 8, 2012, 7:27 am

For example BitDefender. ?

Antis aren't made to "bypass" things. Basically they make sure you app isn't running in the same environment as the specified anti.

You think every one with Anti Sandboxie is making their file run outside the sandbox? No. They attempt to kill the process and if it is running in sandboxie it fails then it ends the application.

GoLD.? - June 8, 2012, 7:44 am

(Jun 8, 2012 04:37 AM)Ultim8um Wrote: [\[CITE\]](#) Looks very similar to Dimension crypter. Just saying, but other than that its nice

~Ultim8um ?

Ye I Agree with you, but crypter looks fine. But I don't know how you managed to kill avg and other av's. Any way good luck with your project.

Shu7down - June 8, 2012, 10:03 am

Thanks gold. As I said, the theme may be the same :). Also I started understanding the things and working on them :)

n00b.ca - June 8, 2012, 12:46 pm

Looks pretty nice. But the GUI is bothering me for some reason.

Chuck Norris . - June 8, 2012, 12:48 pm

I have one small suggestion. Don't say in your sales thread this bypasses UAC because it doesn't.

404™ - June 8, 2012, 12:54 pm

This look nice work good for that :)

Shu7down - June 8, 2012, 3:13 pm

Thanks. Also, I will update this, and will add much much things. I want it to be one of the best around :D

nuk - June 8, 2012, 4:00 pm

I am an IT Engineer and I can tell you that it isn't impossible to "kill" AV's. I see virus's do it on a daily basis! Simple way -- gather all open PID's, "kill" explorer then immediatly kill AV PID and restart explorer but make sure you have code running on a timer somewhere to watch for when the AV "tries" to reopen. If you need an example, look for Dorelif malware - the source is out for it now floating around the internet (but it's in C#), but I'm just sayin... Hope this helped.

Machine gun kelly - June 9, 2012, 7:04 am

looks pretty good so far, hope to see this being a good product soon.

????? - June 9, 2012, 9:07 am

Is it in .net? Yeah, with all respect, it's shit. For the love of god, do not sell this.

Shu7down - June 9, 2012, 9:08 am

Yeah it is .net :) . Yeah It may be . But will try to make it better. Like will add more encryptions + some more stuff :)

????? - June 9, 2012, 9:09 am

That doesn't make it better, that only makes the stub bigger and more things that can go wrong.

More functions = less quality.

That is a common misunderstanding that a lot of these HF "coders" have.

Shu7down - June 9, 2012, 9:22 am

Yeah, maybe. And what is the thing that make it shit?

infamousnoone - June 9, 2012, 9:24 am

The fact that you're probably one of those people who think coding malware in .NET is ok -- that's

what.

????? - June 9, 2012, 9:56 am
