Thread: [\[Tutorial\] Setup Cybergate 1.07.5 Step By Step \[EASY\] \[PICTURES\] \[Tutorial\]](#)

Pain And Gain - June 9, 2012, 9:44 am

This thread will help you setup Cybergate step by step, Ive tried to make this as easy as possible to understand. This is mainly aimed at those that have tried and failed to setup your rat, this is really just learning how to set up the rat and creating a server, no port tutorial is included in this but I may do a port forwarding tutorial soon, so I hope this time this will help you.

First you will need to go to No-IP and register for an account

www.No-IP.com

On the next screen you will come to this screen select the free host option. as highlighted below.

On the next screen fill in your detail's and scroll down to the bottom and click accept and create my account.

After you have done that you will need to verify your email address, when done go back to No IP and login to your account, when you are on the main index page of No IP look to the top right and select your No-IP, then you should come to this page below, select add a new host as highlighted below.

On this screen just copy every thing I have done except to make sure you choose your own host name EX: TestServerTest.No-IP.Biz leave everything else as it is and click create host.

Next is where you will download the client follow the picture below to do this.

Install the client, open it up and this is where you will type in your Email and password that you used to create your account, when you have done that it should pop up with your created host select your host then press OK.

Next we will move on to Cybergate.

I think this is a clean Cybergate not 100% sure. Please check the scan first before you download.

UPDATED LINK 17/8/2012 Download Cybergate here.
http://rapidgator.net/file/33585497/Cybergate_v1.07.5.rar.html

Here is virusTotal Scan if it makes any difference.

<https://www.virustotal.com/file/bd13d3e103ab0c3c67bfaa48106c725f5e553db575e7b4b92640bf43606efc1a/analysis/1345226469/>

Open up your just downloaded cybergate, please note that you may have to turn off your Antivirus to be able to use cybergate, once you have it up on your screen navigate over to Control Center, and click start you should then have a screen pop asking you to select a listening port type in 100 as the port and click the arrow to enable this as the port for accepting incoming connection's for cybergate choose a password I would make it something simple like a number 12345, when you have done that press save. Note if your firewall comes just accept it.

This is where we build our server now, once again navigate over to the Control Center, select Build, Create Server, you should come to the screen below. Click on new then call your server what ever name you want, when done double click on the name of your server.

What you will need to do here is delete the DNS address that is already selected and type in your own host name and port that you setup earlier on No-IP, so to do this click on the add button and should get a screen like below, type in your No-Ip host name like I have done below and also type in next to your host name the port you selected at the start when you started cybergate EX: 100 then click OK, also in the identification space type the name of what you called your server and also the password you picked.

Next go over to the Installation tab, for this one you can just copy every thing I have done in the picture below. Once you have selected and done every like I have in the picture, click the random buttons 5 or 6 times.

For the final couple of steps navigate over to the Anti-Debug Tab, now if you want to test your server you will need to untick some of these if you wanted to test.

And for the final step just copy every thing I have done in the picture below, once done click create server, and thats it your ready to go crypt your server make it 100% FUD and your all good.

??
????????????????

Guess I'll post first. Nice tutorial, always like tutorials that include pictures.

Glad you like mate, thanks for commenting much appreciated.

tyler179898 - June 11, 2012, 12:13 pm

Looks great. Nice and Easy to follow. Can I suggest for next time that you use the spoiler tags for the pictures? Other than that it is wonderful.

FireMoney - June 11, 2012, 1:17 pm

VERY Nice tutorial!Thanks a lot.. ...

Thank you very pleased that you like it. ?

amirali1 - June 14, 2012, 4:59 am

Hey buddy i did everything but when i click on my file i dont see myself coming up on the host, it seems to not work :/

misacampo - June 14, 2012, 10:31 am

Very good tutorial :-)

Keep it up and write more =)

midsat - June 14, 2012, 2:48 pm

Thank you for good job. What about crypting server?

Pain And Gain - June 14, 2012, 11:32 pm

(Jun 14, 2012 04:59 AM)amirali1 Wrote: [\[CITE\]](#) Hey buddy i did everything but when i click on my file i dont see myself coming up on the host, it seems to not work :/

You must have done something wrong, follow the tutorial and do every thing the same as I have done, if that still does not work then maybe you don't have the port forwarded.

(Jun 14, 2012 02:48 PM)midsat Wrote: [\[CITE\]](#) Thank you for good job. What about crypting server?

Please go here to see about crypting your server, there are some good free ones here, but also you could buy one which is possibly the best option.

Free ones here.

DataTracer - June 15, 2012, 11:31 am

Its doen's word that download of Cybergate, give it with Skype, i think thats works

un4gettable - June 24, 2012, 1:57 pm

nice tutorial mate!

thanx :)

?

keep it up!!

keep making tutorials

GodlikeGuy - June 25, 2012, 5:41 am

HQ tutorial and HQ member, nice work on this.

cr4cky cr3am - June 27, 2012, 1:42 pm

very good tutorial it really helped me

iCorb0 - June 29, 2012, 12:13 am

Hey lfl Go On TV Can U Help Me Setup ??? i have skype ill pm u

Enhypen - June 30, 2012, 2:49 pm

How does the keylogger function work on this RAT?

carbira1 - July 4, 2012, 3:48 pm

Could you help me? I got it to work locally by setting up the DNS connections with 127.0.0.1:100 and My local ip address on my router with port 100. It works all fine and great but when I tried to make it work over the internet I have it set to my static ip address and set to port 22. One of the few ports that my isp has unblocked. I have set CyberGate to listen on port 22 and 100 canyouseeme says that it can see me. This is all taking place on the same laptop with un binded exe's. I turn the AV on between tries to clear the old version out. I don't know what is wrong. Any help would be most appreciated.

timboy - July 5, 2012, 11:46 am

help i got a problem i do evrything and my ports are open i test it with a local 127.0.0.1 on me and i got me and then i do it with my no-ip and i dont see my self and if i do it with my no-ip on a other pc i still dont see anyone plzz help me

svmpua - July 11, 2012, 1:58 am

this is a clear tutorial with pictures which is what i like about it.

after creating the server and crypting it,we have to allow our slave to do what??(i am new to RAT :(?)) PLEASE HELP

SIM-1096442 - July 18, 2012, 1:19 pm

Every time i run it i get this error Runtime error 216 at 004064D4 and i dont see my self aswell any help pls

Year - July 20, 2012, 7:56 am

very nice tutorial in depth with pictures very very nice man keep up the good work

ahobowithawii - July 20, 2012, 8:16 am

Very easy and nice guide!

Very helpfull for noobs.

Julian1337 - July 20, 2012, 9:27 am

very nice tutorial thanks for helping!! very noob friendly and usefull thanks

DirgofCeberus - July 21, 2012, 5:48 am

Thanks for the Tut ... very HQ.. I like it so much

jeremy555 - August 17, 2012, 5:31 am

CAN SOMEONE PLEASE SEND ME THE LINK TO DOWNLOAD CYBERGATE IN PRIVATE MESSAGE PLEASE!!!

OfficialJunR - August 17, 2012, 5:36 am

The link is dead. ;p

Btw; Nice tutorial :)

Keep it going !

-JunR

Arnaud936 - August 17, 2012, 5:36 am

Very good tutorial for Cybergate.

Thanks guy ! :)

Pain And Gain - August 17, 2012, 10:50 am

I will try an update the link. sorry for abandoning the thread

venom19 - August 17, 2012, 2:28 pm

Seeking someone who can get me the password for a facebook my skype is: bananero17

mattcharnock - August 17, 2012, 2:55 pm

Thanks helped too much lam using it and it is so nice and stable :D

Bloody9344 - August 22, 2012, 12:44 pm

Quand je teste sur moi sa ne marche pas pouruoi svpl ?

sparkels - August 22, 2012, 1:14 pm

nice tutorial thanks,thanks for the thread

john.smith1111 - August 29, 2012, 8:46 pm

wow very noob friendly tutorial!

Thank you very much op!

Pain And Gain - October 5, 2012, 3:14 am

Bump Bump Bump Bump Bump Bump Bump Bump Bump Bump

K?i?K - September 15, 2014, 12:42 pm

I loved it. Thanks for the help however i need some assistance can you please help me over skype..aman_dulani (skype) Please do add

BigBird711 - September 15, 2014, 2:27 pm

Thanks for tut this will help so much thanks

cmind - December 21, 2014, 4:32 pm

thank you really very much i found the tutorial very helpfull and detailed i really think i will use it :D

xJ2eaction - December 22, 2014, 7:15 am

Very Goog Tutorial Helped me allot Thank you guy :) !

PenisPrikkel - December 25, 2014, 4:25 pm

Download dousnt work :#
please update the link

Voiletblue - September 18, 2024, 9:30 pm

Guys I don't know about this
Can any one tell me about that

Bastille - September 18, 2024, 11:10 pm

(Sep 18, 2024 09:30 PM)Voiletblue Wrote: [\[CITE\]](#) Guys I don't know about this

Can any one tell me about that

Everything is explained in the thread it's a tutorial man, you can't say "I don't know about this" without explaining what you are talking about. Take the habit to provide more details, we're not in your head to understand what you mean.

Besides, this thread is 12 years old man, the only version available of Cybergate is probably backdoored because there are not a lot of reviews on Github. If you want to learn more about RAT then take a look at this section : [Remote Administration Tools](#)

And don't forget to provide details, saying 'It doesn't work' means nothing, what doesn't work ?
Saying "I don't know about this" means nothing, you don't know about what man ?
