Thread: [\[Tut\]](#) [\[PhotoShop\]](#) [How to make your photo / image transparent](#) [\[Tut\]](#) [\[NoobGuide\]](#)

?Rainbow Flash™ - June 13, 2012, 9:39 am

Follow the steps and this should work just fine!

Step 1: Find your image [Mine is the trollface]

Spoiler [\(Click to View\)](#)

Step 2: Now go into photoshop and go to file > new.

Spoiler [\(Click to View\)](#)

Step 3: Change background contents to TRANSPARENT!

Spoiler [\(Click to View\)](#)

Step 4: Click OK.

Spoiler [\(Click to View\)](#)

Step 5: Goto File > Place

Spoiler [\(Click to View\)](#)

Step 6: Place your image that you want to make transparent.

Spoiler [\(Click to View\)](#)

Step 7: Click on magic eraser.

Spoiler [\(Click to View\)](#)

Step 8: Click the background of the image with the tool.

Spoiler [\(Click to View\)](#)

Step 9: Done!

Spoiler ([Click to View](#))

Step 10: Now Save As a PNG.

Spoiler ([Click to View](#))

Notice: No flaming please as you see by the title its a noob guide For the people new to GFX.

Your welcome dude :)
I am here to help people :)

Could you just use a render? Not being critical or anything, asking a legitimate question.

mayboz127 - June 14, 2012, 12:38 am

I just usually lasso rope it and erease everything around it. That's how I render.

Also it will take longer but the magic erease tool can select area's you dont want

? Various ? - June 16, 2012, 11:10 pm

this isn't exactly making a picture transparent, in your case it is because the background is so simple, but it wouldn't work with magic eraser if it was a gradient background or many colors, or even something complicated like leaves of a tree, you would wanna lasso it and select around the face of your troll face, then hit ctrl+shift+i to invert your selection, then press delete to delete the background :)
