Here we'll create something like this (similar not same)

[Video: http://www.youtube.com/watch?feature=player_embedded&v=_JCc24Zqz5A]

Shortcuts used

Duplicate layer - Ctrl + J

Reason for making three layers of same text

If you select and use the option 'Layer via Cut' you'll notice that after the cut there's a small empty line/space between the two parts which does not look good. That the reason to make two layer , one which is not cut and other two layer which contains the parts.
