Thread: [\[BORED-NOOB\] Network tester \[/BORED-NOOB\]](#)

itai19901 - June 16, 2012, 4:20 am

Hey.
im suppose to study for a final, but i don't want to.
so i made this very-vey short and very-very noob script.
It does alot of talking, checks your ipconfig and pings google to see if it gets any packet back.

[Download here.](#)
[or if you feel like you want to waste a couple extra seconds..](#)
Just go in and hit the big green button.
You can use [this one too](#), but i don't like the way it asks for emails. Found it randomly on google.
i'll get a proper host in a few.
I don't know if this is actually needed, its just a batch, but in most places you do, [so here's the scan.](#)
Cleaner then an idiots mind.

EDIT: Well, if you wanted to see the code so badly then here you go..
Code ECHO OFF
CLS
TITLE NetTest
COLOR 0A
ECHO This simple batch will show you networking data and check
ECHO connectivity with google.
ECHO Google's never down, right? why not connect with it..
pause
CLS
ECHO Let's first see if we have got a proper IP, so that would mean we should have
ECHO connectivity.
PAUSE
IPCONFIG
PAUSE
ECHO if you see random numbers and not zeros, its ok.
ECHO Don't bother with the Subnet mask and the default gateway.
ECHO.
ECHO Well lets clear this windows and connect with Google to see if
ECHO the computer is actually capable of communicating with the world wide web!
PAUSE
CLS
ECHO Ahhh, much better. lets see if we can send and recieve packets from google.
PAUSE
PING www.google.com
PAUSE
ECHO So, if all packets that were sent are also recieved, you're internet is perfectly fine
ECHO and ready to use.
ECHO.
ECHO If there is some loss, then it must be slow, or slower then usual.
ECHO.
ECHO But if there is a full loss, you have no connectivity at all, and you should solve it.

PAUSE

CLS

ECHO Well, i'm done here. Created by NeroTurbo as a result of boredom.

ECHO Cya'll.

PAUSE

EXIT

NeroTurbo out ?

chrisman0091 - June 16, 2012, 5:10 am

Password to 'unlock' download? Thanks :) Or can I Just get a direct download link?

itai19901 - June 16, 2012, 5:19 am

Yeah that host tends to do that.

I'll get anothe rlink in a sec.

EDIT: Changed links and added another one.

ShadowInsanity - June 16, 2012, 7:45 am

Just a heads up, Post the source next time. Itll get more people to actually reply here and give you feedback. I personally dont like downloading from someone whos alpha rank. Or if they have neg rep. Thats why its good to just post source not DL links

itai19901 - June 16, 2012, 8:18 am

you can check my joining date, its same place where the rep is.

my rep isn't negative, i just don't post much.

I'm actually trying to be more active and i plan on LEET and UB3R in the future..

i will edit and add the source, i made a tiny change that i really liked..

ShadowInsanity - June 16, 2012, 9:10 am

I know you dont have neg rep. Im just saying that most people wouldnt download something from someone whos only has 46 posts.

itai19901 - June 16, 2012, 9:37 am

i meant the join date, im here for more then a year, does it make sense i'd have such a low post count? as i said, i don't post much, i don't search for trouble.. well, not here]:->

besides, i don't think reps come and go that easily.

Spoderman - June 16, 2012, 9:44 am

This is possibly the most basic script I have ever seen.

I would rate you a 1/10 for your script.

All you've done is use IPCONFIG and PING. At least make it multiple choice like this:

<http://mintywhite.com/software-reviews/productivity-software/create-multiple-choice-menu-batchfile/>

That should be of great help to you.

itai19901 - June 16, 2012, 10:45 am

I'm a begginer, that's my first batch.

It will.

This actually was made for my mom that always complain the internet isn't working, and when i

explain to her its because the signal is weak on her laptop (using WiFi) she just keeps complaining. so showing lots of stuff she doesn't understand is what i did XD

CyanideByte - June 16, 2012, 12:07 pm

It's a pretty basic script, you could improve it by adding ways to try fixing the network connection. (Renewing the connection and what not)

What I did like is how you put some personality into your script, that was kinda cool.

Looking forward to seeing what you make as you learn more.

itai19901 - June 16, 2012, 9:41 pm

How did i not think about this..

thanks!

V2 will be comming up soon..
