Extreme GPU Bruteforcer is a professional solution for the recovery of passwords from hashes using GPU. The software supports hashes of the following types: MySQL, MySQL5, DES(Unix), MD4, MD5, MD5(Unix), MD5(APR), MD5/phpBB3, MD5 Wordpress, LM, NTLM, SHA-1 and many others. On modern graphics cards from NVIDIA that support the CUDA technology, the software demonstrates outstanding operation speed. For example, an average attack speed on NVIDIA GTS250 is 420 million passwords per second for MD5 hashes, 720 million passwords per second for MySQL hashes and 550 million passwords per second for NTLM hashes. The solution implements several unique attacks, including mask and dictionary attacks, which allow recovering even the strongest passwords incredibly fast. Utilizing the power of multiple graphics cards running simultaneously (supports up to 32 GPU), the software allows reaching incredible search speeds of billions of passwords per second!

4. World Fastest MD5 cracker BarsWF

John The Ripper is a free password cracking software tool. Initially developed for the UNIX operating system, it currently runs on fifteen different platforms (11 architecture-specific flavors of Unix, DOS, Win32, BeOS, and OpenVMS). It is one of the most popular password testing/breaking programs as it combines a number of password crackers into one package, autodetects password hash types, and includes a customizable cracker. It can be run against various encrypted password formats including several crypt password hash types most commonly found on various Unix flavors (based on DES, MD5, or Blowfish), Kerberos AFS, and Windows NT/2000/XP/2003 LM hash. Additional modules have extended its ability to include MD4-based password hashes and passwords stored in LDAP, MySQL and others.
