i've a lots of sites which are vulnerable but every time i used to get a prob either i didnt able to find the admin login or i didnt get the didnt able to crack the hash or if i get everything that i needed like admin login and user id and pass even then i'm not able to log in to that..can anyone plz tell me what can i do for that..

i think they are using php script and it refines according to the ip address,can anyone plz tell me how to login into these sites
