Thread: [\[HASH\] What is this hash type?](#)

Prx3R0 - June 19, 2012, 3:23 am

Code dab1a4a621be6da88cf2fad4a6b15af9:MPdSC5Jn2QZdwbdpggQIXDStltple8Ct
Can someone tell me the hash type? (MD5, SHA1 and more.

Thanks!

Keeper - June 19, 2012, 4:03 am

dab1a4a621be6da88cf2fad4a6b15af9:MPdSC5Jn2QZdwbdpggQIXDStltple8Ct:ekinogul

Algorithm: md5(\$pass.\$salt)

Prx3R0 - June 19, 2012, 4:26 am

Algorithm: md5(\$pass.\$salt)

WOW, nice and thanks.

You know how to crack wordpress passwords?
(use hashcat?)

Yeah, not only hashcat. Post them here but since the md5 algorithm for them is called like 8192 times, they appear to be one of the slowest to crack.

Algorithm: md5(\$pass.\$salt)

That looks like md5(\$salt.\$pass) ???

MPdSC5Jn2QZdwbdpggQIXDStltple8Ct relates nothing like md5/sha1 as its regex as you know is [a-f][A-F][0-9]

I am not questioning you, but in my 15 years of cryptography this doesn't make sense and im always open to learn something new ha.... thanks

db_hash

I also crack passwords, I have a perl based time memory trade off setup on my slak box with 16billion pregenerated md5's and 9billion pregenerated sha1's, no not rainbowtables.... same concept totally different tho... anyone with lists I would be glad to run it through my setup as well....

Check it out here --> <http://www.insidepro.com/ashes.php?lang=eng>

Password: ekinogul

Salt: MPdSC5Jn2QZdwbdpggQIXDStltple8Ct

If you had 15 years of experience (no fence), you should've at least ran a check for the algorithm with the password in a .dic file.

Hi man.

Can you crack this hash for me (wordpress.)

Code \$P\$BbfQ2oZ15eSG7xF/iBL3.auqmVAhnC1

Thanks man!
