Thread: [How To Spread Your Virus. \(Using TPB and game cracks\)](#)

bob7up - June 19, 2012, 8:18 am

Find a game that a lot of people want cracked for the PC (I used Skyrim)

Download a real crack.

Make a keylogger, make the title the name of the .exe in the crack. Make the icon the same aswell.

Put every file and folder in the folder with your virus in it, don't overwrite the virus with the real cracked exe.

Make a .rar file and put all the normal crack things with the virus .exe in it.

Make a torrent and upload to #.

You will most likely get a few people who fall victim to the virus.

Note: I have gotten 7 downloads in 1 day, although only 1 has actually activated the crack. :/

I actually never saw it before, but it's a good method. :)

I got 85 installs last week in two hours from this method.

Everyone knows this method though.

Lol this is nothing new. This is how everyone used to spread back in the day on xbox before we had exploit packs.

Ziexxx - June 19, 2012, 6:53 pm

The problem with this method is finding a clean original crack.

Simply because everyone who has the ability to design a sophisticated crack, also has the ability to infect your PC silently.

Please be careful when attempting this method, it works but many use it, so there are a lot of infected cracks.
