Sekigahara - February 28, 2010, 3:32 am

Sorry I can't PM you. The tool works with your icons. But It doesn't work with icons I made in Paint(save a picture as name.ico , and the resulting file is icon). Actually I want the icon of the resulting file to be the same with the image, since I don't know what type of icon one might use with jpg files.

Draven714 - April 5, 2010, 4:41 am

I just have a quick question, and hopefully I can ask it without getting flamed for a week :)

This is the first time using an icon changer... when I change the icon it's changing the file size from 2317kb to 50kb. Is this normal?

My steps:

Making a server using CyberGate v1.04.8

Encrypting using Julie's Cyber Crypt v2.2 (<https://hackforums.net/showthread.php?tid=285769>)

Using Unflamed Icon Changer v2 on the encrypted server.

The server works on myself before and after the icon change.

wanna_hacker - April 5, 2010, 5:04 am

not working for me :(

back up is my exe file name

it makes my exe like this.. i have tried by changed many icons but failed

[IMG][http://i43.\[censored\].com/i3zz8z.jpg](http://i43.[censored].com/i3zz8z.jpg)[/IMG]

Jeff. - April 5, 2010, 5:22 am

@wannaTry to upload it to a downloadlink and downlaod it your self im sure it has the icon on it then

.

@Draven A icon change could fck up your Rat thats treu. Im very sorry but mine isnt really for the Rat scene i think if things like this happens. But if your using a crypter ther is more change that will fck it up if its doesnt have EOF encryption.

Jeff. - April 11, 2010, 11:54 pm
Some icon changer just do this most of them aren't rllly RAT proof try to check your crypter as well.

failzathacking - April 14, 2010, 7:22 pm
Wouldn't let me change icon. Error or something.

Internet Hobo - April 14, 2010, 9:02 pm
Seems simple, and i like simple.
I tried changing the icon of subsevens icon, since fc fucked that up when he made 2.3 but it just immediatly crashed it and now it won't respond, I don't know if its your programs fault, or subsevens, but i cant try it on any other programs due to that :(

Thanks for the share though.

JIT Debugging

To enable just-in-time (JIT) debugging, the .config file for this application or computer (machine.config) must have the jitDebugging value set in the system.windows.forms section.

The application must also be compiled with debugging enabled.

For example:

<configuration>

```
<system.windows.forms jitDebugging="true" />
</configuration>
```

When JIT debugging is enabled, any unhandled exception will be sent to the JIT debugger registered on the computer rather than be handled by this dialog box.
