Thread: [Roid Booter is going to have a new custom script](#)

Roid - June 20, 2012, 8:46 am

Will for these past days I've been coding a menu sort of like the gott / xtreme / viking script except its brand new with a lot more ddos functions and a period per boot.

It will include all the latest and new floods. I noticed with the xtreme script that it doesn't allow you to chose your packets which is a decrease of the power. So I am going to be editing each flood so you can attack with 65500 packets and there will be a time limit so people won't abuse it such as hit over the time limit of 6k, I have had at least 5+ customers do that already which I got them suspended. Everyone will now have there own custom login with there desired username. The booter will be more powerful than ever.

I am doing this thing that after each boot time such as every minute you boot you'd have to wait for 10 second. So example if you boot someone for 1 minute you need to wait for 10 seconds, 20 minutes 2 seconds. And so on so for 6000 seconds which you then have to wait for 1000 seconds until you boot someone else so its 18 minutes.

Now if anyone who purchased it and is mad about this it isn't that much 10 seconds for every minute.

I will also be selling private servers which will mean you'll be the only one on the server and you can resell spots too as much as you want. You'll be given root login too but you can not change the password for it, if you do so you'll be suspended and I'll be charging \$50 monthly for it.

My booter which I am selling is going to be \$20 as usual.

So that's about it.
