Dark_Noodles - June 21, 2012, 7:00 pm

xDDoSeR 7.5 Setup Tutorial by Dark_Noodles

Thank you Positive for allowing me to do this.

Chapters :

1. Downloading xDDoSeR
2. No-IP Setup
3. Port forward
4. Exploring xDDoSeR
5. Building your bot
6. Testing + Installs

Chapter 1 : Downloading xDDoSeR

1. Positive did a very good job with xDDoSeR and I hope it continues. Anyways, we'll start off by going to the thread page, which is found [here](#)
2. Yes, you would have to complete a survey. No, I will not send it to you. Don't worry, surveys are easy and Foolish is easy to DL from ? When you're done, you should put all your xDDoSeR files into one folder like so :
3. Once completed and downloaded, proceed to the next step!

Chapter 2 : No-IP Setup

1. Head to : [No-IP.com](#) and make a new account. If you already have one, great!
2. Login with your newly created account and click on "Add a Host"
3. After that, you will be prompted with a screen that asks you for your hostname, domain, and all of that. Fill out only the hostname and the domain. Since xDDoSeR requires a 3 letter hostname and a domain as "no-ip.info", we will need to create a host with that layout. This is what mine looks like :
4. Now download the DUC client and install it. Login with your credentials and select the host you have created.

Chapter 3 : Port forward

1. Click your Start button and open up Command Prompt (cmd.exe).
2. Type in "ipconfig" and find your Default Gateway
3. Since my default gateway is 192.168.2.1, I will enter that in my URL bar.
4. You will need to forward ports : 81 and 1994
5. Depending on your router, you will have to look up a port forwarding tutorial.

Chapter 4 : Exploring xDDoSeR

1. When you open xDDoSeR, you will see this screen :
2. Enter in your desired username (mine will be Dark_Noodles) and click Add.
3. You will now see this very nice GUI :

4. As you noticed, there are 4 columns (Locations, Connections, Ping, and Status). Those columns list information on your bot.
5. If you right click on xDDoSeR, you will notice there are more commands such as : Download Execute, Uninstall, Info, and Passwords.
6. There are other options where you can change the GUI options, but those are not necessary.
7. After that, everything seems to be cleared out. Let's move on the the next step.

Chapter 5. Building your bot

1. If you noticed, there are 2 files that came with xDDoSeR.rar. xDDoSeR.exe and Bot Builder.exe
2. For this step, we will need Bot Builder, which will be building our bot.
3. Open it up and fill out your information. Mine looks like this :
4. Now click Build! If you encounter an error, please comment so I can help you fix it.

Chapter 6. Testing + Installs

1. Once your bot has been built, click on it and you should see yourself appear on the connection list. To uninstall, simply rightclick on a client and click "Uninstall".
2. To DDoS, put in the IP and the port and hit "DDoS". To stop, click "Stop"
3. If you wish to get installs, I suggest going to YouTube and start spreading on there.

That is all for my tutorial. I spent about 30 minutes creating this, so it isn't that HQ. If you need help on any RATs or DDoSeRs, you can use my service, which is found [here](#)
Thank you guys and thanks to Positive!

ProductiveHQ - June 21, 2012, 7:02 pm

Nice TUT OP. Keep it up and don't start slagging.

**** JIT Debugging ****

To enable just-in-time (JIT) debugging, the .config file for this application or computer (machine.config) must have the jitDebugging value set in the system.windows.forms section. The application must also be compiled with debugging enabled.

For example:

```
<configuration>
  <system.windows.forms jitDebugging="true" />
</configuration>
```

When JIT debugging is enabled, any unhandled exception will be sent to the JIT debugger registered on the computer rather than be handled by this dialog box.

Heres a screenshot of error (my no.ip does start with 3 letters)

Heres a screenshot of error (my no.ip does start with 3 letters)
Spoiler ([Click to View](#))

I looked at your screenshot...and I see something wrong.

o.ip.info <- ??

That Host you have could be the problem. It should be - 123.no-ip.info (replacing the 123 with your actual 3 letters.) That is why you're getting the build wrong.

I hope this helps!

zerocool - June 22, 2012, 7:31 am

I does have 3 letters i did add it next to screen shot , its red now so people can see it .

Thanks for reply thou

(Jun 22, 2012 07:27 AM)Dark_Noodles Wrote: ([CITE](#)) I looked at your screenshot...and I see something wrong.

GreenPanda - June 22, 2012, 7:35 am

Thanks for making the effort to make this tutorial, you look HQ.

However, you should improve the wording and the formatting of the post. It is not very eye friendly.

Dark_Noodles - June 22, 2012, 7:35 am

(Jun 22, 2012 07:31 AM)Z3RO C00L Wrote: [\[CITE\]](#) I does have 3 letters i did add it next to screen shot ?

(my no.ip does start with 3 letters)

Wait wait wait. On the screen shot, it says "o.ip.info"

Are you referring that the "o.ip" is the 3 letters?

Sorry if I'm not getting the hang of what you're saying, but I'm really tired right now. Sorry!

zerocool - June 22, 2012, 7:37 am

Yes i just blanked out the other letters , trust me it does start with 3 letters as it should i just no idea what is wrong ?

(Jun 22, 2012 07:35 AM)Dark_Noodles Wrote: [\[CITE\]](#) Wait wait wait. On the screen shot, it says "o.ip.info"

Oh! Ok! I see your problem now. I didn't noticed that you blanked it out!

So here's your problem -> You're doing ip.info. It should be ".no-ip.info" with your host before the .

Example : 532.no-ip.info

zerocool - June 22, 2012, 7:46 am

It does i copied the info from here and made a new no.ip for this

<https://hackforums.net/showthread.php?tid=1357182&pid=23313050#pid23313050>

The no.ip is correct at time of build

Resilience - June 22, 2012, 7:48 am

thank you nice thread im gonna test it out

Dark_Noodles - June 22, 2012, 7:49 am

(Jun 22, 2012 07:46 AM)Z3RO C00L Wrote: [\[CITE\]](#) I does i copied the info from here and made a new no.ip for this

The no.ip is correct at time of build

Yes, but are you using the "." instead of the "-"?

So your No-IP right now is : 693.ip.info?

It should be 693.no-ip.info

zerocool - June 22, 2012, 7:54 am

***.no-ip.info

Yes thats how i have it , still same error .

Thanks for your help thou

I've heard of IP Killer. It is very fascinating to me.

ChopCity - July 16, 2012, 10:56 pm

When i try to open the program, it just crashes...what am i doing wrong??

kingkelvin135 - July 16, 2012, 11:25 pm

Very nice HQ tut this will help many people.

Admin_Black - July 17, 2012, 1:41 am

Nice TUT,...but where is the download link..please give me that..

Dark_Noodles - July 17, 2012, 7:37 am

(Jul 16, 2012 10:56 PM)ChopCity Wrote: [\[CITE\]](#) When i try to open the program, it just crashes...what am i doing wrong??

You probably have an old version. If you do not have 7.5, then download the new one. If it still crashes, reinstall .NET Framework. Reply back if it does not work.

(Jul 17, 2012 01:41 AM)Admin_Black Wrote: [\[CITE\]](#) Nice TUT,...but where is the download link..please give me that..

<https://hackforums.net/showthread.php?tid=1357182>

That is the link to download xDDoSeR. Good day ?

Joseph123 - July 17, 2012, 7:28 pm

What is the "Info.ico" file for? And where do you download it from? I think that is cause my error, which is the same as Z3R0 C00L's.

phlow - July 17, 2012, 7:31 pm

Good tutorial man. I'll check this out later tonight.

MarkCMS - July 17, 2012, 11:40 pm

who is the download link? sorry for my english

Dark_Noodles - July 18, 2012, 11:27 am

(Nov 9, 2012 11:49 AM)x_Violent Wrote: [\[CITE\]](#) how do i delete this off my computer?
Start -> msconfig -> Remove any suspicious files.

Also check your Appdata + temp folders.

Bennyboy - November 10, 2012, 8:23 am

I'm having problems with this.

When I put 127.0.0.1 as my IP then the bot works when I double click it. However, when I put in my no-ip.biz-adress it won't work. I won't show up in the xddoser window. I have the DUC-program up and running without any problems and I checked many times and I have not spelled the IP wrong. I also checked on canyouseemee and they could see both port 81 and 1994. I'm having the same issues with RATs and this drives me nuts!

Help me please! :(

Dark_Noodles - November 10, 2012, 8:28 am

(Nov 10, 2012 09:23 AM)Bennyboy Wrote: [\[CITE\]](#) I'm having problems with this.

Try no-ip.info instead of .biz

That might be the problem.

Bennyboy - November 10, 2012, 10:39 am

(Nov 10, 2012 09:28 AM)Dark_Noodles Wrote: [\[CITE\]](#) Try no-ip.info instead of .biz

(Nov 10, 2012 05:00 PM)Dark_Noodles Wrote: [\[CITE\]](#) Do you have an icon? If not, then download one from IconFinder.com

Nope I don't. That small of a thing can mess up the whole thing?

Edit- I added an icon, but I'm still getting an error. "Compiler executable file vbc.exe cannot be found" I'm really not sure what I'm doing wrong.. I'm guessing it has to do with something not on my computer like vb.. but I know it is... thanks anyways.

It's probably a .NET error.

Maybe you just have to reinstall .NET.

kingkelvin135 - November 10, 2012, 10:27 pm

Hq tut this should help a lot of members out.

Bennyboy - November 11, 2012, 4:24 am

I'm still having difficulties..

Even though I changed to a no-ip.info DNS it still won't show up. Can someone help me?

Yup, it was. I tried it on Windows 7 and everything worked fine. You should add in the tut that its not compatible with windows xp. I can't run the server on my xp computer either, I get the .net framework not found.

Is it possible that it does not work on vista either? I am trying to use it, but it is telling me that the app has stopped working and that Windows is looking for a solution. The thing that puzzles me though is that the bot builder opens and runs fine.

Dark_Noodles - November 12, 2012, 6:17 pm

Try running it through Admin. If that doesn't work, maybe a .NET error.

ca9a2536fd8b17df76f7ee082 - November 23, 2012, 7:15 pm

I'm getting this error

See the end of this message for details on invoking just-in-time (JIT) debugging instead of this dialog box.

JIT Debugging
To enable just-in-time (JIT) debugging, the .config file for this application or computer (machine.config) must have the jitDebugging value set in the system.windows.forms section. The application must also be compiled with debugging enabled.

For example:

```
<configuration>  
  <system.windows.forms jitDebugging="true" />  
</configuration>
```

When JIT debugging is enabled, any unhandled exception will be sent to the JIT debugger registered on the computer rather than be handled by this dialog box.

If you are using a No-IP, make sure you have your ports (1994 and 81) forwarded.

witch - November 24, 2012, 8:37 am

Thank you so much! This was an excellent tutorial that I will be referring to often in the future.

jimbo- - November 25, 2012, 9:51 am

For everyone getting errors:

Update your .NET version to the latest version.

Make sure you use an icon or else it won't build.

Make sure to use a 3-char .no-ip.info host or else it won't work.

Make sure you port forward ports 81 and 1994 through your router.

Make sure you allow the program through your firewall, turn your firewall off, or open ports 81 and 1994 through your firewall.

If you follow those guidelines, your server should work just fine.

Dark_Noodles - November 25, 2012, 10:53 am

xDDoSeR is an amazing bot!No problem. I used to be Positive's head of support but I took some time off and now I'm back.

1000Lava - November 26, 2012, 9:23 pm

I know I am still new to all this and probably sound like an idiot, but it's important to know where this stands if I want to risk using it. So from what I gathered about creating botnets so far it involves having to host it yourself if you want to actually get it to spread? If the wrong person finds your server is hosting viruses it could land you in some trouble since the IP would be easily traceable no? Sorry I'm still new to all this, but it's important to stay informed of risks when doing these kinds of things.

AmazedMoron - November 26, 2012, 9:41 pm

**** JIT Debugging ****

To enable just-in-time (JIT) debugging, the .config file for this application or computer (machine.config) must have the jitDebugging value set in the system.windows.forms section. The application must also be compiled with debugging enabled.

For example:

```
<configuration>
  <system.windows.forms jitDebugging="true" />
</configuration>
```

When JIT debugging is enabled, any unhandled exception will be sent to the JIT debugger registered on the computer rather than be handled by this dialog box.

Narrate - February 22, 2014, 11:51 pm

hmm maybe because this tutorial is from 2012-2013. Stop gravedigging pls.

II Ryoka II™ - February 23, 2014, 3:02 pm

neither one of use are grave digging... we have legitament questions. no need to be that way.

xSnaQz - *October 3, 2015, 11:35 am*

niiiiiiiice job man!! luv ya

Copywriter - *October 3, 2015, 11:38 am*

Now how do we get slaves? .___. Any efficient way of spreading? PM ME THANKS
