Thread: [\[batch malware\]](#) Virus [\[batch malware\]](#)

SHARPEYE - February 5, 2010, 8:34 pm

Okay you guys I just threw this together and i think its pretty funny! ?

What it is - It is a couple of bat and vbscript files thrown together, and disguised as a Myspace profile viewer for skid fags, so they can impress they're friends.

What it does -

It deletes your keyboard and mouse, and then proceeds to pop up the internet over and over and over again, while it also opens up a pop-up message that says: "You've got a virus", over and over and over again. As the victim sits helpless staring at his crashing computer.

The download link is [here](#)

I wouldn't suggest opening the file yourself.

Enjoy spreading it! ?

mycool123 - February 5, 2010, 8:37 pm

I could probably write the batch half of this in about 20 minutes. Very funny though :)

huh? i dont understand what you just said.. but it only took me about 5 mins to make lol!

mycool123 - February 5, 2010, 8:45 pm

I meant that I'm still learning .vbs stuff.

Haha.

?BlueAce™ - February 5, 2010, 8:52 pm

well.. its epic in some other sense.. for noobs..

Skyro - February 5, 2010, 8:54 pm

Not really "epic" imo

Kotei - February 6, 2010, 4:39 pm

It's good for myspace tools...Most people have gone to facebook tbh =/...myspace is used by people who want to stalk the famous people they have crushes on =/

unknown123456 - February 7, 2010, 5:27 am

thats fucking shitty

LoL it doesnt matter whos faster!

-mothered- - February 14, 2010, 4:34 am

I've seen many very similar to this one.

Nonetheless, still good for a bit of a laugh :)
