[Video: <http://www.youtube.com/watch?v=tYD8JRG8JE4>]

I worked on this hard.
I hope you guys will like it!

Enjoy! ?

Wires - June 24, 2012, 7:00 am

Was watching out for this video, its all love ?? ? x O r ?

Mr Kewl - June 24, 2012, 7:02 am

Great man, people would learn a lot from this.
Thank ?? ? x O r ? . :)

Lolololo, Acunetix at the bottom of your screen
Lolololo, hacking on Windows.

Just kidding. You're awesome man. Just went through it really quickly, skipped parts etc. But it looks great!

Will have to watch it without skipping later. A bit busy right now.

I hope you'll write a tutorial too though. I prefer reading over watching! :)

Also in the video you revealed your own IP. I hope you were on proxy or something. I bet some kid will DoS that IP! :P

FluxHax - June 24, 2012, 7:24 am

Thank you very much, I was waiting for this.

@fobber

Yea i know.

I use Acunetix to crawl files and folders.

And i have Linux too.

My IP is dynamic,thanks for your concern though. :D

Every kids have been brain washed that "Acunetix, Havij" Is skiddie tools..

Why is it skid tools? It's even better then solve it with your brain.. Sure everyone could do it with Havij but yea by reading a tutorial and follow the steps just takes time and every kid could do that to. sure i know manual SQL injection and Error Based SQL injection but i still prefer to use Havij or SQLninja because i do not hack for fun i hack for a purpose and never do defacing anymore.. And why are you saying "Hacking on Windows" you could do it exactly as fast on windows as you can on Linux.. Linux just got some tools so it makes it easier and more undetected. The things that you actually could do in this video with linux would be to use SQLninja for the manual sql injection and use a stealth backconnect called weevly instead of netcat.. And acunetix is a great tool to search for vulnerabilities who has time to sit and test a website for EVERY security exploits that's out there Acunetix has around i think 70% of the public website side exploits that's out there and is public.. If a guy here on hackforums don't use Acunetix he either use another program or just hack for fame and hack random sites that's he find with google dorks. So please stop saying that Acunetix and Havij is skiddie tools because they are not.

Prx3R0 - June 24, 2012, 7:39 am

Dude the video not work for me O.o, can you send me the link?

Lol. I thought you'd figure it was a joke.

Anyway. I myself use Acunetix and Havij sometimes too. And I'm on Windows too. I'm really a lazy kind of person. I know how to manual inject, but why would I use time on checking if a site is vulnerable, if I can have a program to do it for me.

I really don't mind Acunetix and Havij. I think you got me wrong, it was a joke, man! :)

I was kinda referring to those people who complain about Havij being a skid program. Chances are, the ones who complain, actually use Havij themselves. But they try to grow an e-penis.

Thanks for this Haxor <3'n the video... just what I needed to see for rooting (:

Th3PonyWizard - June 24, 2012, 8:39 am

Nice video overly :3

#At the injection, it's far better if you'll change the parameter value into negative. Ex. ?id=-1. And how the hell did you find that kernel? xD Never saw anything old like this.

Agent Raigar - June 24, 2012, 8:40 am

Right now they are mostly outdated for quantum but few useful ones were live http headers, tamper data, hackbar...

you can make your own or simple download it just ask google webshell c99. There are tons of webshell and c99 is one of them.

HaxOr? - October 26, 2018, 6:39 pm

I wouldnt trust random shells on the web they are probably backdoored.

I would love to make my own But i don't know How If you can Help me or suggest me it would be really helpful and appreciated .

i downloaded c99 and get traped because No one uploads fully Clean file without creating Backdoor on it So i don't believe that if i download over internet it should be clean.
