Thread: [Venom Logger](#)

venomxboss - February 6, 2010, 10:50 am

My first keylogger

It doesn't send the logs to an email but will save the logs in a logs.txt file on the computer you infect.

Pretty much I'd say if you have a computer at home and you have annoying brothers and sisters who use it as well just infect yourself and hide the logs.txt and wait till one of them signs into their facebook and change their status or something just for fun this was just a program i made for fun just started C++ a couple months ago so i'm still new let me know if it works :D

<http://www.sendspace.com/file/zqnqxq>

Virus scan

Virus Scan and first try on your self before posting show some screens 2

johnt2 - April 18, 2010, 11:49 am

How do I 'uninfect' myself? I tried deleting the file but it wouldn't work rolf..

;S

The 7th Sage - April 18, 2010, 11:52 am

Post screenies pl0x.

johnt2 - April 18, 2010, 11:54 am

Screenies of what? I would like to know how to remove the keylogger.

I can't delete the file :(

The 7th Sage - April 18, 2010, 12:15 pm

I was telling the op to post screenies of his logger.

Great Prosperity - April 18, 2010, 1:53 pm

Does this use keyboard hooks and are the logs clean? mind posting some screenshots?

venomxboss - April 18, 2010, 2:35 pm

This is an old/dead thread :P

And I don't even have the source anymore so no screeny's
Just a FUD keylogger builder.

And keyboard hooks
not clean at all
