Thread: [RAT \(Remote Administration Tool\) Guide for Beginners - Q&A Explained.](#)

Bender. - June 27, 2012, 3:36 am

Q – What is a RAT??

A – A RAT is also a shortcut called Remote Administrator Tool. It is mostly used for malicious purposes, such as controlling PC's, stealing victims data, deleting or editing some files. You can only infect someone by sending him file called Server and they need to click it.

Q – How do they work??

A - Some RATs can spread over P2P file sharing programs(uTorrent, Pirate Bay etc.), Messangers spams(MSN, Skype, AIM etc.).

Q – Where can I Download this ?

A – You can find free RATs on the forums or you can search them up (like CyberGate, Darkcomet...).

Q – How do I control server ?

A - Once installed, RAT server can be controlled via RAT client. From IP list box you choose PC and connect.

Q – What do I need to setup RAT?

A - Well, you will need Windows OS, open port & RAT.

Q – How do I port forward?

A – Port forwarding is easy and important for RAT. Well, you need open port because RAT connects through open port and bypass firewall.

Open your web browser and write your IP and connect to your router(write Username: Admin & Password: Admin), open port forward page and write port you want and your IP. Well that's all you need to do and now you got open port.

You can follow this well explained tutorial [here](#). (Credits to Plutonium. :p)

Q – How do I make my server FUD?

A - If you want to make your server FUD again, you will need crypter(you can find free FUD one here.). Also, you can hex edit your server, but be careful some servers can crash after hex editing.

Q – How do I remove server if I infect myself ?

A - When you infect yourself, first what you going to do is to connect to your PC. Some RATs have function to uninstall servers, well you click that and you uninstall it. Well there is another way, download MalwareBytes' Anti-Malware and scan whole computer for Trojan.

Q – Is it Legal or illegal ?

A - Well, some RATs are legal, and some are not. Legal are the one without backdoor left, and they have ability to close connection anytime. Illegal are used for hacking and they can steal data(Credit Cards, Passwords, private data etc.).

Legal: TeamViewer – Access any remote computer via Internet just like sitting in front of it – even through firewalls.

UltraVNC – Remote support software for on demand remote computer support. VNC.Specializing in Remote Computer Support, goto my pc, goto assist, Remote Maintenance Ammyy Admin – Ammyy Admin is a highly reliable and very friendly tool for remote computer access. You can provide remote assistance, remote administration or remote

Mikogo – Mikogo is an Online Meeting, Web Conferencing & Remote Support tool where you can share your screen with 10 participants in real-time over the Web.

(Legal if you RaT only in your house...) Illegal: Spy-Net

Cerberus Rat CyberGate Rat

SubSeven Turkojan

ProRat DarkComet RAT

BlackShades RAT

and more!

Q – Where and how do I spread?

A – There are few different ways to spread your server. You can spread on warez websites, P2P file sharing websites(uTorrent, Pirate bay etc.), YouTube etc. Well, some people use custom made Auto-Spreaders programs to spread their server. But best and most effective way to spread is when you FUD your server.

Q – What's DNS host?

A - The Domain Name System (DNS) is a hierarchical naming system for computers, services, or any resource connected to the Internet or a private network. It associates various information with domain names assigned to each of the participants. Most importantly, it translates domain names meaningful to humans into the numerical (binary) identifiers associated with networking equipment for the purpose of locating and addressing these devices worldwide.

Q – What can RAT do?

A – Here is list of basic features:

- Manage files
- Control web browser(Change homepage, open site etc.)
- Get system informations(OS Version, AV name, Ram Memory, Computer name etc.)
- Get passwords, credit card numbers or private data etc.
- View and remote control desktop
- Record camera & sound
- Control mouse
- Delete, rename, download, upload or move files

It depends of the RaT you use... They have other functions.

Q – What's a reverse Connection?

A - A reverse connection is usually used to bypass firewall restrictions on open ports. The most common way a reverse connection is used is to bypass firewall and Router security restrictions.

Q – What is "direct connection"?

A - A direct-connect RAT is a simple setup where the client connects to a single or multiple servers directly. Stable servers are multi-threaded, allowing for multiple clients to be connected, along with increased reliability.

Q – Can I get traced when I rat somebody?

A – Yes and no. Depends on victim, it is really hard to remove infection or even trace a hacker. There are tools like WireShark, but it's really hard to trace, because PC usually got over 300 connections. So don't worry.

If you liked this thread, Please say THANKS !!!

Thanks for all those handy little tips in one place. I'm sure many ppl will find it useful:)

Bender. - June 27, 2012, 3:43 am

Thank you edelea. :) I hope also !!

yukapuka - October 25, 2012, 5:45 pm

thanks for this info, cleared it up for me

anacroe0101 - October 27, 2017, 6:22 am

Wich is the best RAT from this forum?

InFlash - October 27, 2017, 6:55 am

Thanks for this Info.

Will help newbies
