UnlimitedAccess - June 28, 2012, 12:25 pm

I would like to bring everyone's attention to the fact that the file this person sent me (Facebook freezer) is a complete virus. There MAY be a source inside the rar file, but the rar file itself is a virus. I have a feeling that once opened (even the .rar), bad things will happen. Not only that, my local antivirus has detected it, VirScan.org has detected it, and Virustotal has also detected it. As far as I understand, sources should never be detected? Open at your own risk!
