Thread: [Shell Allowing FTP Access?](#)

Haters Ganna Hate - June 28, 2012, 1:51 am

So im currently subscribed to this service which is really good for me. The problem is that for some security reason, they disabled FTP access.

I was wondering if there was a shell or something I could upload so I use thats very similar to a FTP client (rename files, move em, etc)

Thanks!

There is a php shell called the c100 shell, <https://hackforums.net/showthread.php?tid=2010913>
Not sure if thats what you're looking for.

I think any shell with a file manager will suffice. Have you tried GNYShell?

Haters Ganna Hate - June 28, 2012, 8:08 pm

Problem is that most files i need upload require "chmod" and the web interface that my host has... doesnt have this...

Im pretty sure its possible because other people uploaded stuff with it but that was BEFORE they disabled FTP.

Help?

Generally shells have a feature to CHMOD files. Did it not work?
