Thread: [Skype Mycode](#)

Omniscient - June 28, 2012, 3:03 pm

I've added a Skype mycode for users.

Format is simple.

Code [skype]skypename[/skype]Will produce:

[skypename](#)

Feel free to post in this thread to test your Skype name. To get your image to appear as "Online" follow these instructions:

You may need to alter your privacy settings for the ONLINE status to appear.

Step 1 - Open Skype

Step 2 - Click "Skype" in the upper left hand corner

Step 3 - Click "Privacy"

Step 4 - Show Advanced Options

Step 5 - Click this:

Step 6 - Use the MyCode

Wow that's a pretty neat feature.

Good job Omni.

n0pcode - June 28, 2012, 3:04 pm

nofear1999 - June 28, 2012, 3:06 pm

Thanks for taking my idea in, for some reason it's producing offline. Let me try something else.

Omniscient - June 28, 2012, 3:06 pm

Yeah I haven't been able to get the status to be right.

Jae? - June 28, 2012, 3:07 pm

Isn't working, I'm online.

Looks like a great feature though.

-

Working, privacy settings weren't set.

Quiet. - June 28, 2012, 3:07 pm

Also, when you do click on it, it goes to make a call to that person. Can you instead make it so it starts a text conversation with that person rather than a voice one? Most people here use text more than voice.

Omniscient - June 28, 2012, 3:07 pm

But I'm curious if it's because of privacy settings though.

This is one of the best codes I've seen out right now. Glad you have implemented this into this forum. It will come to great use, especially to those that are perpetually in the Marketplace section and need to contact someone immediately. They can now simple visually perceive if their online without integrating them rightfully.

What would actually be more amazing is having a specific section in members profiles for Skype. Just like the way we have the Twitter plugin. Just another section on the profile to keep the Skype Online bar visible.

Smyly - June 28, 2012, 3:58 pm

You could do that by setting something up on your own website. But I believe dynamic signatures are not allowed.

No it'll be better if we hide it, that's why the profile tabs were removed where we could enter our details of MSN/Skype/AIM/ICQ.

They were removed because of increase in impersonation and scamming.

It is actually possible, I've seen on other forums. I think there is a plugin for VBulletin.
Same like this plugin, if you click on person's Yahoo on the forum, you can add him or load chat.

But MSN can be easily frozen and not sure about MSN and it's implementation.

Are we allowed dynamic sigs such as counters or image rotators?

No. You're not allowed to use dynamic sigs on HF. They can be abused and normally slow the loading of pages. So we ask that you do not use dynamic images in your sig. This rule also applies to avatars.

So that means we aren't allowed to put this thing in our signature?

So we can only use it in posts? Like in marketplace or tinychat place
