Thread: [safe Dark Comet downloads versions 4 to 5.3.1F](#)

nitoh - June 29, 2012, 3:06 pm

If u feel u can trust i made this thread where u can DL

clean DarkComet versions 4, 4.2F, 5.1, 5.2F, 5.3 and 5.3.1F

I will keep the downloadlinks up to date.

For the pack:

<https://mega.nz/#!pBpmVJxa!j-mhnS2P9IKBnRQ9TbhdqfU13qUNbe0JcRcTTuxgb9Y>

PASSWORD = thankyou

BECAUSE I RECEIVED SO MANY COMPLAINTS ABOUT THE MD5 CHECKSUM I DECIDED TO REMOVE THE SEPARATE RAR FILES

MANY DID NOT UNDERSTAND AFTER COUNTLESS TIMES OF REPEATING IT OVER AND OVER AGAIN THAT IF YOU REPACK A RAR FILE

ITS MD5 CAN CHANGE...SO NOW IF YOU WANT THE CORRECT MD5 YOU WILL HAVE TO DOWNLOAD THE FULL PACK.

SORRY PEEPZ BUT I GOT TIRED OF EXPLAINING IT ALL OVER AND OVER AGAIN.

password for the pack = thankyou

No need to post and PM just download what u need and use on own risk.

This is a mediafirelink, no shitchash so plz...

Leave a thnks if u like and to keep this threath alive.

Need help setup Darkcomet??

Go to this thread and we will fix your problems with setup as fast as possible :

CLEAN

Since several members are complaining about this download link thinking this software has a backdoor or is not the official one, I downloaded it and compared both MD5.

MD5 OF THE OFFICIAL .ZIP FILE

(no longer available since the coder announced the end of this project)

MD5 OF THE .ZIP FILE IN THIS THREAD

The VirusTotal scan can be found [here](#). This version of DarkComet is clean.

If you are going to share DarkComet and wanting my "approval", feel free to [PM](#).

means i'm not responsible how u use the tools.
i just provide with clean versions.?

Lian - June 30, 2012, 9:20 am

I tested version 5.3.1 and I can confirm that is the original one. Unfortunately I didn't have time to test the latest version from its release, was always in my "to do" list. When I read the news yesterday that the project was closed, I came across different links, most of which were infected. I was able to find the copy of the original website where I got this info about the original file:

DarkComet.exe 11,2 MB v. 5.3.1
md5 D761F3AA64064A706A521BA14D0F8741
sha1 AB7382BCFDF494D0327FCCCE9C884592BCC1ADEB

md5 of the link posted in this thread for version 5.3.1 match the original, therefore I can confirm that this link contains the real file (at least 5.3.1)

Thank you

Nyonic - June 30, 2012, 9:20 am

Thanks for showing this.
I was going to share mine but I guess most people beat me

nitoh - June 30, 2012, 10:29 am

the latest version is included it shows as 5.3.1 but it is 5.3.1F i prefer to keep the F versions cause imo those are the most stable ones.
btw all the versions in the pack are from the site when they were still distributing.

You can simply upload the file to a virus checking website like elementscanner.net

You could do it on virustotal.com as well, since it's not a crypted file.. so it's okay.

Is darkcomet-rat.com the official website and if so is the RAT infected or something?

I find it strange they have a download there that has 2 installation files, one called "DarkComet_Module_setup.exe" and the other "DarkComet_Full_setup.exe"

Why the hell would it require an installation, especially after they shut down the project after YEARS of having it just as 1 executable file and no installations

To everyone that is thinking of downloaded any of the files provided by nitoh.

pack = passworded/ nitoh's Mediafire account got limited

4.0 = Tested and clean, No Download problems

4.2F = blocked for violation

5.1 = blocked for violation

5.2F = Tested and is clean, No download problems either

5.3 = Tested and is clean, No download problems

5.3.1F = Tested and is clean, No download problems

As I could not download the files that werent obtainable from mediafire that I mentioned in the testing list (4.0, 4.2F, 5.1), I could not test as they werent obtainable but the ones that are available can be seen in the test list above and are clean.

Hi, thank you very much for this! I had to get a new hard drive and lost my version. Anyway I had a question, I downloaded 5.3.1F since I'm guessing it's newest and most stable. when I run darkcomet.exe it auto installs user\me\appdata\local\temp\upnp.exe on my computer. that upnp gets detected as a backdoor.. is that just part of the darkcomet program? false positive? whats it for?
THANKS!

Universal Plug and Play (UPnP) is a set of networking protocols that permits networked devices, such as personal computers, printers, Internet gateways, Wi-Fi access points and mobile devices to seamlessly discover each other's presence on the network and establish functional network services for data sharing, communications, and entertainment. UPnP is intended primarily for residential networks without enterprise class devices.

I've turned off my Anti-Virus and Firewall, but when it finishes downloading it says 'Virus detected' and deletes it from my computer..

I know its not, my point is how am I supposed to download it without having my computer deleting it?

I've disabled my AV & Firewall..

Anyone know the difference between versions 5.3 and 5.3.1F? I would really appreciate the info.

lokoroxbr - February 13, 2013, 3:54 pm

i am using the 5.3.1.... but im having this kind of problem:

Quote:i downloaded version 5.3.1 from the link above, but im having some kind of problem i would like to ask:

I opened darkcomet normally (only opened the client, i didnt have to install anything), and i was

using it normal... after a while (5 minutes) client suddenly closes, and when im gonna check the folder of darkcomet, client was deleted... it dissapears....

i would like to know why is that happening... my McAfee is disabled...

Could it be because BlackShades is also opened ???

thx :)

and

Quote:Windows Defender already is disabled, cause i use McAfee internet security. McAfee is disabled, only his firewall is enabled....

COULD IT BE A CONFLICT WITH BLACKSHADES?? cause i really dont know whats going on...

bmeghla - February 13, 2013, 4:18 pm

Disable all firewall.I had same kind of problem.I did this.

I've compare 5.3.1 version MD5 (that I've downloaded from trusted source) with MD5 of OP post's version and they are match. Seems to be legit.

BTW MD5 is D761F3AA64064A706A521BA14D0F8741

Make sure everyting like AV and firewal,malwarebytes,win defender,...
is disabled before u run the .exe and next time use the search button,
look for a tut and learn how to set it up right before posting on my thread that u might have
downloaded a RAT and shit

This not an accusation,just a noob question.

is it normal that screen filter and avast wont let you download this kind of software? And how do I seperate the infected files from clean files when both of them acts like a virus ?

The reason why it won't let you download it is because IT IS A VIRUS. What OP meant by 'clean' is it's not backdoored.

Temporarily disable your AV, add to exclusions or just remove it.

Abodhussain - March 20, 2013, 2:36 pm

well its not clean, virus detected when i downloaded it.

RySec - March 20, 2013, 2:49 pm

Too everyone saying it's a virus it's NOT.

If it does not detect as a virus then it is probably infected.

Hello bro's

what is the last version for today? (full, with server conviguration)

P.S. DarkComet RAT Legacy is only for viewer ? I didn't found there server configurator

nitoh - April 29, 2013, 6:14 pm

Latest version 5.3.1 is the most stable imo and it fits your needs ;)

Yuikoro - April 30, 2013, 12:17 am

Hmm... I still can't download it, but I managed to download the pack. Unfortunately, there's no darkcomet.exe in the folders. (At least for 5.3.1 and 5.2.2)

thanks again .i ve downloaded this so many times

Yuikoro - May 1, 2013, 2:19 am

Thanks!

But uh... I have a problem.

On the 5.3.1, the exe deletes itself if it's running in the background (minimize it).

Should I just try out the older versions/redownload?

Can i download it ?

or he hack me then ?

AbsoluteMonarchy80 - July 9, 2013, 4:05 pm

I downloaded and used one of your downloads, specifically the 5.3.1F version, and it worked great.

Just for further confirmation, I ran the DarkComet removal tool and it said explorer.exe is infected. Is this normal?

Thanks.

is there a bug in 5.3.1f ??It doesn't matter whether you spread 20 times or not

It also depends if your virus is FUD or not.

Just because you spread it, doesn't mean you'll get people.

Mooseknuckles - December 23, 2013, 10:18 pm

I've got to admit, I was really hesitant to download this because I wasn't confident that it was clean. The MD5 sum images can be easily faked, and who knows what the actual MD5 Sum was on the original download?

I found a few threads on this site giving different MD5 sums as the "real" one, which made me seriously question this download link. I know that the Facebook page of the developer even includes a comment providing an MD5 hash, and it does NOT match what this download gives (for 5.3.1F). Maybe he had a different version, I don't know what he was posting.

But, you can actually verify the original MD5 of the 5.3.1F ZIP file using the Internet Wayback Machine:

<http://web.archive.org/web/20120626015742/http://www.darkcomet-rat.com/downloaddc.dc>

The images from OP have the same MD5 checksum, so it seems legit. I am currently downloading, and will verify that the downloaded file has the same checksum.

UPDATE: MD5 checksum on the download matches the Wayback Machine cache. Personally, I feel confident that this is legit.

I keep getting the following error messages when trying to run the version 5.3.1F or 5.3. Am I doing something wrong?

Quote:'Cannot create file "C:/Users/User/Desktop/DarkComet/comet.db". Access is denied. There is no file comet.db in the folder, and running as administrator makes no difference.

Quote:Access violation at address 00821BE9 in module 'DarkComet.exe'. Read of address 00534. No idea what that means.

Quote:Access violation at address 77A2AC0F in module 'ntdll.dll'. Write of address 74AF1A8B.
There is no file ntdll.dll from what I can see?

It then comes up with the EULA agreement, I click accept and then it displays:

Quote:Unable to write to C:\Users\Sam\Desktop\DarkComet\config.ini

There is no config.ini. After this point it does nothing. I have no protection software at all running whilst doing this (no firewall, no antivirus, no antimalware etc.)

I have download the Darkcomet-Rat 5.3.1.f from the Link in the first Post
(uploaded - before 22 Days · 13,38 MB)

<https://www.dropbox.com/s/cstrlcvjzpzur6ru/DarkCometRAT531.rar>

Then i download the Windows Checksum Tester here
<http://winmd5.com/>

Then i check the Md 5 with the Tool

This is the Checksum from Internet Archive:

Latest stable version. (Release date : 04/06/2012 at 20:04)

Product version : v 5.3.1 FIX 1 fwb

Product MD5 : 86ae13f5f7b56596101ba1ee2ab8963e

And the Result from your Download Link is
"aa5d63556d0d66229a01280ee4ae10fd"

Now tell me Please i was stupid, and tell me my Failure ?

I will test the Rat, but without the right Checksum, i was angry and i don't want Test it.

This is a Question at all Guys and Girls here, please Test the File self, and tell me the Result when is different to my result.

It could also change check-sum when i put a password on it, without pass the files kept getting deleted online. i can rar the rar files and upload those. If the check-sum is such a big deal for u but then members will complain about dead links so i will leave it like it is.?

If u don't trust my links simply close thread and move on to something u DO trust, so many have claimed these files can't be trusted but all i ever saw were words but everything except solid proof since this thread is up.

Btw(It was deleted after detection)It's been said many times over. Antiviruses automatically detect tools like these as viruses, simply because of what they do. Antivirus companies don't want you using these types of tools. You need to disable your Antivirus while you use the program, or you can do what I did, extract the files to a folder somewhere on your computer, and go into your Antivirus settings, and add an exception to that folder only, you should be able to run the program just fine after that.

Other than giving me -rep, you should either explain or leave it unexplained. I shared what i found, if i did sth wrong well im human so are you.

I will ask whoever downloading this to check MD5 and make sure it matches the md5 mentioned in the darkcomet official link . If it doesn't then the file must have been edited and hence not recommend to download.

Good Day

If you took a couple minutes of your busy time and read some pages of this thread you would see i had to Rar the RAR files again because dropbox was deleting the files over and over and over and freaking over again.

Want the exact same MD5 so you can sleep better at night download the PACK.. unrar and check the md as much as you like they will match... the separate Rar's are EXACTLY the same files but i

had LIKE I SAID re RAR them with different password (this is reason for MD5 change).... ?

Its against site TOS to bitch about neg by the way ?

Also i removed the separate versions and left you guys with the full pack (all the seperate versions on the first post are in this pack by the way), unrar ... check the MD5 and guess whut... i wont spoil the surprise go ahead and check dem ^^

make sure the darkcomet.exe is in the same folder with the sqlite3.dll file, they should both be in the original file when you download. so basically dont put the darkcomet.exe file alone, keep it where it is when you download it, but you can extract it to a folder hope this helps ?

If you are going to get it crypted then don't tick UPX (Ultimate Packer Executable) but if you are, I would leave it off and just have it on No compression.

I know that, but somehow I don't really remember that being standalone file, and you haven't really answered my question. I am asking because I am not sure but i couldn't get my Dc to work, tried infecting my self and all I got was a remoteless dummy which I later managed to remove with MBAM.

And yes, I tried everything with disabled firewall and AV, + can you see me saw my port normally + I even tried with 127.0.0.1 (am using Win 8.1)

Hey, only thing I can assure you is that the md5 and sha1 match original file posted by DarkCoderSC but more than that is up to you to decide if it is safe or op is 1337 haxor and managed to edit files and than repack with same md5 and sha1 (md5 collision is only possible to preform on one block, and you can't generate same sha1 as someone told me in one theard)

Oh...Okay, I get it. But cant the original file be infected? I mean could it be already infected when DarkCoderSC posted it (Well at least my antivirus keeps telling me that it has lots of malware and trojan ****, probably false tagged)? But nevermind and thank you so much for your reply!

I feel your struggle man, I didn't really trust this for a long time but it turned out there is so little possibility of it being infected.. Idk, and no problem glad to help :)

edit: forgot to add it wasn't infected when DarkCoderSC uploaded it since he was developer of it :p

Thank you for the RAT :) , being completely new at ratting, can any one pls tell me why the RATs are replaced so often.. I'm thinking if they work and encrypting works there should be no need since the same could be of use continuously.

They would be FUD and the needed functionality is there, so why keep making new ones, there can only be so much room for improvement after a certain point.

Thank you all for your help and contribution to HF :)

There is always room for improvement. If there was no room for that it would be achieving perfection and we all know perfection is not real.

thank you, that's perfect

AkkeBoi - July 13, 2016, 8:53 am

So this works and its checked to be legit? Seems alright with me.

samaki91 - July 13, 2016, 8:04 pm

Vouch for him. DC works perfectly, use with your own risk.

TheCrazyGuy - July 15, 2016, 8:15 am

Thank you so much to post the download here!

Electron Board - August 14, 2016, 3:48 am

i trust him!, man ysaying safe,etc. going to try it out too. have a nice day.

ked13 - September 8, 2016, 7:40 am

thank you very much , im beginner , i dont now many things about hacking but i do my lerning. im from ivory coast , contry in west africa , and i dont speak weel english.
thank man

Darb - September 8, 2016, 2:22 pm

Why not, I still use it from time to time.
easy to crypt, free and it didn't screwed up in the ass yet like all
the others do ?

Arguable, if you want to leave yourself open to the reverse attacks against the controller. lol

C'mon dude, even DCs developer laughs at it now.

No point in debating, thread will stay up as long there is a demand for this and by the look of
it there still is.

Not everyone intends to use this for malicious purposes, in that case reverse attacks against the
controller should not be something to worry about.

Just Saying.... ?

We both know it to be true. at least this is a trusted resource.

DC Has alot of exploits ex: Taking of the computer of the guy infecting victims i can guarenteed u
dont want that happening your clients taking over your PC

Ex: Hard to crypt (Need to buy crypter)

And overall its just old and trash

Move on to darktrack ?

opsplayer - September 23, 2016, 12:11 pm

Missing The Time I Used DC . lelel Amazing Times Manee

Prefixed - September 23, 2016, 1:11 pm

We've all had fun times with DarkComet probably. But the project is abandoned - the output stub is sooo detected, and as stated above it's comes with alot of exploits.

Use another RAT, I would use DarkTrack both for testing and malicious.

every stub that is spit out by a RAT is soooooooooo detected ???

SIM-3253035 - October 2, 2016, 7:06 am

I prefer Darktrack but thank you for sharing :D

ArcanSquad - October 3, 2016, 1:27 pm

Dark Comet.. i hate it.

Buy a RAT on Hackforums ?

You are vouching a RAT that has multiple exploits and is next to impossible to make FUD, Well actually you can FUD it still but there is little point.

Anyhow you get what you pay for, Free RAT's are not really the correct path to go down.

ANNOUNCEMENTS - November 19, 2016, 2:50 pm

Its legit folks, nothing to worry about here

teemovsyomama123 - June 3, 2017, 9:56 am

thanks mate :) its good to find a legit clean copy in this very very dirty world

Mirakuru - June 3, 2017, 1:54 pm

Please guys...

Don't use DarkComet its outdated, exploitable and can be used against you.

If you wanna free one then use Revenge RAT. ?

No it's not, hasn't been safe for a long time. What website are you talking about though? As far as I know there isn't any official link on his facebook, ax0, darkcomet-rat.com or phrozensoft.com...
