Thread: [Progress of the uJDB server build!](#)

??s?? - July 2, 2012, 2:39 pm

We just purchased this server along with some other goods, it's on it's way over. We plan on building it up a bit more, currently the water cooling system is finished. Thanks to my friend IOS Dev for the help with this server. :)

Few Specs:

6 core
64GB RAM
250GB SSD

Some Pictures (Thanks IOS Dev):

The old server will be used as a back up server in case of emergency or maintenance, we expect this to be functional in a couple days or so, along with the firewall, etc... all the good stuff. We plan on upgrading the server a bit more and upgrading it with an other SSD.

I hope everyone enjoys this once were online and everything. =)

FluMist - July 2, 2012, 2:41 pm

Wow you were not kidding when u said you bought stuff for it, I can almost afford the paid membership on uJDB :p

ViN - July 2, 2012, 2:53 pm

Looks like your putting a lot of work on this. I will buy once you accept LR. ?

Alex™ - July 2, 2012, 3:36 pm

Wow that looks like allot of money. I hope it will be used for more than running your website. A raspberry pi could probably run your website you just need some good ddos protection. And thats allot of ram, how much did that ram cost you?

I'll upload a pic of my water cooling in a min :D

Prices can't be disclosed, unfortunately, haha. And uJDB will really be the only thing really hosted on it. If anything we might host a new product if we decide to launch a new software in the name of uTech. :)

Well heres a picture of a getto ac/heater i made with leftover parts i had from my pc:
[img]http://pscreen.pimg.in/a51033.png[/img]

It uses a peltier cooler to heat it up or cool it down. There is a auto temp cutoff switch and a massive heatsink under the table :) It works amazingly well.

lol, that's actually pretty crafty if you ask me. :D

V_Hustle_V - July 2, 2012, 4:27 pm

I like this man! I'm going to test it out and see what's up with the trial! I will get this!

??s?? - July 2, 2012, 4:41 pm

Haha, thanks! Yeah just go register at <http://uJDB.in/register.php> to get started on your trial, I hope you like it. :)

Lysergic - July 2, 2012, 6:19 pm

Wow, as if you need all that power dedicated to something that requires at least 400mb of ram on a fucking linux server. LOL!

Daffy Duck - July 2, 2012, 6:30 pm

Hey, may I ask how you host a website/server on your own computer?

??s?? - July 2, 2012, 6:30 pm

(Jul 2, 2012 06:30 PM)Daffy Duck Wrote: [\[CITE\]](#) Hey, may I ask how you host a website/server on your own computer?

Google how to run an Apache web server on a computer.

Chasey - July 2, 2012, 9:51 pm

So many wires :O Looking great though, keep it up!

If that's the only thing you're hosting, why are you putting so much into it? What a waste.

A storage website, similar to megaupload. And a hosting company, :)

Frostbite™ - July 3, 2012, 6:11 am

Can your OS even support 64GB of RAM?

??s?? - July 3, 2012, 11:58 am

(Jul 3, 2012 06:11 AM)Frostbite™ Wrote: [\[CITE\]](#) Can your OS even support 64GB of RAM?
Yes it can. :)

(Jul 3, 2012 06:06 AM)Daffy Duck Wrote: [\[CITE\]](#) A storage website, similar to [removed]. And a hosting company, :)

Not really interested in opening up an other web hosting company, wasn't my cup of tea so to say.

(Jul 3, 2012 01:05 AM)Orgy Wrote: [\[CITE\]](#) If that's the only thing you're hosting, why are you putting so much into it? What a waste.

The server might host a Minecraft server on the side for fun, mostly because it's so little and you can still do a lot. :P Really want to dedicate most resources towards my main project(s). :D

Antoninus - July 3, 2012, 2:36 pm

Whats the connection speed going to be? Speedtest please

??s?? - July 3, 2012, 2:39 pm
