Thread: [I need help hacking into a ssl server.](#)

Idiris100 - July 2, 2012, 5:28 pm

Hello everyone. ? This is my first post. I just need help hacking into a website server that has SSL. Its hard for me to explain, but basically I just want to change some information in my account that the owners of the website will not let me do. So I think I need to get into their database and find my account with my information and change it. Are there any programs or softwares that I can use to do this. Please no negative comments, I am a noob when it comes to hacking?. Any help would be much appreciated.?

First off,

Welcome to hackforums ?

You can breach into the database of course, just look around this section.
I'm pretty sure you will find few tutorials.

Here are my personal tips for you.

Read this thread its helpfull.

- <https://hackforums.net/showthread.php?tid=1832813>

Then like in the thread said you should learn basic stuff.
Learn basics of PHP and MySQL programming language.

Then you should read few tutorials.

You should learn:

-SQL InjectionBasic

Error Based

Time

Blind

-Local File Inclusion/proc/self/envIRON method

php://input method

php://filter method

-Remote File Inclusion

-Cross Site Scripting

Read them in order, then you have a good knowledge.

After you are done, you are ready to breach into the website.
If you want to request an server breach, open an thread in:

Requests for Hacking

<https://hackforums.net/forumdisplay.php?fid=48>

I hope this helps you, enjoy your time here !. ?
