Thread: [Looking for a laser pointer.](#)

Turacos - July 5, 2012, 2:46 pm

Hey im looking for a the cheapest laser pointer that burns.

That is all im looking for Thanks!

Dextral - July 5, 2012, 2:49 pm

I'm looking around for one of these to... I'm interested :P

Space Impact - July 5, 2012, 2:49 pm

O man you guys missed out there was a thread selling these a while back =P.... anyway hope you guys find some!

commandzombie - July 5, 2012, 2:52 pm

I think a guy called Ryans laser shop was here for one month ago, I don't know if it was named "Ryan laser shop", but something like that :P
Look in the marketplace! :)

oldman1 - July 5, 2012, 2:54 pm

I was looking at mag lights yesterday and one stood out as he was frying a egg with this torch it was so powerful.

James Bond™ - July 5, 2012, 2:55 pm

I saw someone selling them in the sellers section for \$50

Result - July 5, 2012, 2:57 pm

Look in the market, Please sell these... But there alot of money.

bigbt96 - July 5, 2012, 3:09 pm

http://www.amazon.com/BEAMSHOT-GRNBEAM-Class-LASER-POINTER/dp/B0014VVIB4/ref=cm_cr_pr_product_top

that should do the trick.. but u can also buy a cheappy \$10 laser from walmart, make sures it a green laser and use a magnifi glass..

Rolls Royce - July 5, 2012, 5:33 pm

Don't do DealExtreme. The laser they sent me would not work.

Dr?ke - July 5, 2012, 6:00 pm

These are only \$40 and they're good
http://www.wickedlasers.com/lasers/Core_Series-67-3.html

mayboz127 - July 5, 2012, 6:01 pm

The ones that actually burn tend to cost 35\$ or more. Good luck :)

?Cloud - July 5, 2012, 11:19 pm

\$40 for a 5 mW laser, what a waste of money lol.

OP - I'd say you need around 150-200mW to burn things effectively. I don't get why you would dish out \$200-300 just to burn things when you could use a match.

People here really lack in basic laser knowledge. ?

halotigerkil - July 5, 2012, 11:39 pm

<http://laserpointerforums.com/> Look around for someone selling them on there is my opinion, they make them for recreation and are amazing at it.

Un-Named - July 5, 2012, 11:58 pm

Oh my god some members here are fucking dumb I swear to god.

Please read the output.

People here really lack in basic laser knowledge. ?Yes, thank you, someone with basic laser knowledge.

OP, remember what you were taught in 3rd grade or whatever the fuck taught you ROYGBIV?

Lasers are different builds for each color.

ROYGBIV

Red

Orange

Yellow

Green

Blue

Indigo

Violet

Red lasers are very unstable, rather than green and blue lasers which are very stable.

If you want to start going into exotic Orange/Yellow colors, then those will actually reach you into the \$1000's.

OP, there is a member here that goes by the name of RoyalLasers

He might of changed his name to RyanRenieis I think but just see if you can find him.

He makes very high quality lasers and sells them for cheaper than on laserpointerforums...LPF is known to take advantage of new people into the world of lasers.

Blue's will not start to get interesting until 400mW+

Green's that burn are very rare and are very expensive. a 1W green laser will cost up to \$800.

Red lasers will get interesting at 200-300mW.

Blue lasers will always be more expensive than red lasers.
Red lasers will always be the cheapest laser

I'd like to post more information about lasers but it's 2:05am and I want to play CS:S.

Grimes - July 6, 2012, 12:29 am

If you want a cheap but nice working burning laser around 200mw I recommend buying this
<http://dx.com/p/true-green-laser-pen-5mw-91>

That's the 5mw, you need to take out the insides, replace the laser module with this
<http://dx.com/p/200mw-532nm-green-laser-module-3v-11-9mm-26891>

And there you have it a \$48 burning 200mw laser

If you're on a tight budget I recommend this otherwise you should just probably take a look at RoyalLase's quality builds

oxtrodit - July 6, 2012, 3:25 am

actually the price of a laser pointer is not so high.you can get it under five dollar.there are many color of laser pointer such as red,green,yellow.so i am recommending you to buy 5mw 532nm Astronomy Powerful Green Laser Pointer.
