Thread: [Protect Yourself Form DoS and DDoS!](#)

RULE? - July 8, 2012, 3:15 am

Yesterday i downloaded a new firewall called Comodo Firewall and it looks pretty good. It is supposed to protect your from all types of DoS and DDoS even though i recommend surfing the internet with TOR or a VPN whenever you can anyway. However if you are in a situation where someone has got your IP then this could help you out, especially if you are someone who has problems with changing your IP i suggest you download this. I spoke one of the customer support representatives about the firewall and this is what he said:

Spoiler ([Click to View](#))

I haven't seen many posts about his anywhere on HF so i though i should share it with those who haven't heard or it!

Post bellow if you have any questions and i will try to look them up and answer them or post if you have had success/experience with this firewall.

Download: <http://personalfirewall.comodo.com/free-download.html>

Austerity - July 9, 2012, 4:16 am

Downloading it now, i really need something to block Ddos, & Dos Attacks, dude if this works im gonna really love you :D

?cid - July 9, 2012, 4:18 am

I dont know if this will work. Could i test it out on you or something. Then you will know for sure, just like a 3 minute hit with your permission of course.

Pudge the Butcher - July 9, 2012, 4:51 am

ok guys . i have 3 machines and i have a botnet so i installed it on one to test ts protection and here are the results

Attack of 3.87 Gbps
blocked ips 198 out of 220
Net speed reduces by19%

so it means it can block ddos but not fully .
so i think its better to use it because at-lest it protect us by some amount of ddos

?cid - July 9, 2012, 5:22 am

Pudge the Butcher - July 10, 2012, 4:43 am

i just downloaded the free version and yes it protect us but our Net speed reduces by19% .

Austerity - July 10, 2012, 5:08 am

DUDE THIS WORKS READ MY FIRST POST - I got my friend to test his 2gb ddoser, and it says 8337 intrusions blocked ?!?!? it fucken worked i didn't lose connection aswell , if your's does not work , i recommend posting on their forums or talking on chat, cause sometimes you need to configure differently, but usually it already comes With Blockage With DDoSers , Dos Attacks.

Cr0vv - July 10, 2012, 5:32 am

This has been posted before but its ok because it has not been posted but only a few times. It would be much better to be on a vpn tho.

MaxPain - July 10, 2012, 6:35 am

LoL sorry guys for saying but you can't defeat the DDoS attack, cause it's simply UDP , not port needed and it's like a bandwidth attack so this is shit. I tried this before.. I am wondering why they are like protect from "DDoS" probably lan or something.. Else in the 0,1% they could do some updates and found the solution?

Deciever - July 10, 2012, 8:04 am

Looks pretty good :) will have to try it out

Themagicshark - July 10, 2012, 8:08 am

It won't block it, it will crash your modem before the firewall can even block it.

BanTeR - July 10, 2012, 5:29 pm

Dont work there servers aint that strong and slows your bandwidth down by about 20%

Drazah - July 10, 2012, 5:34 pm

Tried this, not working. This one sucks.

husky141 - July 10, 2012, 8:38 pm

sweet thanks for the find man, i'll definitely check this out!

Exemplify - July 21, 2012, 1:27 pm

Thanks for the recommendation. :D I needed a good firewall.

Shocking - July 22, 2012, 6:28 am

you could use a vpn, good free vpn.

<http://www.hotspotshield.com/>

Thats what i do!

jour - July 22, 2012, 2:16 pm

Its best to Download COMODO internet security premium, has antivirus, firewall etc

The Winter Soldier - July 24, 2012, 1:32 pm

Will Comodo affect the usage of AVG 2012 Free and Malaware bytes?

RULE? - July 24, 2012, 1:33 pm

Not at all. Mine ran fine, however it doesn't protect you from all ddos attacks.

Network. - July 25, 2012, 7:51 pm

People are just now using Comodo Firewall?.. I thought this program was widely known about.

Yes Comodo Firewall is the best.

Lante - July 26, 2012, 12:45 am

A DDoS attack uses a DNS or IP in order to attack someone or something, Comodo is software for your computer, which gets its internet connection from a router or modem, which handles all connections. When a DDoS attack occurs, it will simply crash your router instead of crashing your computer. You only lose internet/network connection.

Comodo will not be able to block a DDoS attack for 100%.

bitshock - July 26, 2012, 8:29 am

so it means it can block ddos but not fully .

so i think its better to use it because at-least it protect us by some amount of ddos

I think it's total bullshit that a simple software firewall such as comodo blocked a 3.87 Gbit/s attack. Unless your machine was in a high-tech datacenter or your ISP has massive DDoS protection in place, a true 3.87 Gbit/s attack would knock out not only your line but probably a whole chunk of your ISP's network.

-iLikeRainbows. - July 27, 2012, 7:27 am

No software firewall will secure you from a DDoS. Unless it's a really low bandwidth attack.

There are way's to mitigate but certainly isn't software based.

My hardware Watchguard Firebox won't even stop a DDoS.

The only way to try and stop DDoS is to mitigate it the best you can..

Something like a Cisco Guard XT 5650 that delivers multigigabit performance, and cost thousands. (In the region of around 70 - 80k)

Fossil - July 31, 2012, 7:49 am

There is no possible way to fully protect yourself from a DDoS Attack,
Government websites are known to have gone down from DDoSing.
