Thread: [GidePT – Professional Open Source GPT Script](#)

**This Is War** - July 8, 2012, 2:03 pm

Previously for sale, we are now placing GidePT up for open source.

This is version 1.6, and includes an extensive administration panel, and handling for users with a secure database interface.

You may download the files here: <http://synlantech.com/?p=6>

Brought to you by the team at [SynLan Tech](#).

**gide\_gnome** - July 8, 2012, 2:05 pm

Why? Because SynLan Tech cares about you bunch. Some of you anyway.. Regardless, enjoy!  
Any support related questions may be asked here and I'll see about checking in often.

**This Is War** - July 8, 2012, 7:33 pm

Next up on the open source list is my RAT.

**Cashman** - July 8, 2012, 9:48 pm

Slight problem with my PaymentWall pingback. When I enter the value of 10, it credits me 9... When I test pingback with 1000, it credited me 900.

Have 1 dollar equal 50 points.

Should fix it fairly quickly.

It's already set to that. And I've tried different settings with exchange rate.

Not quite.

Honor Et Veritas is a friend of mine.

I'm working with his business partner while he works shit out with his little brother.

And a little update for those wondering, the melody valve didn't work, his body rejected it, so they replaced it yet again, and his body rejected that one as well.

He's on the heart transplant waiting list for now.

Zarabyte is a bit of a douche, so I doxed him.

Now he's pissy and is basically coping everything that I do and saying he's doin' it.

Oh, and mod\_security, you ARE zarabyte.

And why can't you compile your own damn dox? You had to copy the one i dropped on your ass?

Skid.

ROFL! Tard fag. This shit is already released by us, the coders. Congrats on releasing already open source software? Someone's a bit jealous that they don't have any of their own content to release ;(

Nobody here is going to do charge-backs like you, because for one everyone loved the product, and secondly everyone here knows they wouldn't win that charge-back, just as you lost yours. Fucking noob.

**mod\_security** - July 10, 2012, 9:09 pm

Fix your wordpress link cause its broken im releasing a # link because you guys are stupid and broke your link on page 1 derps.

Your wit and delusions are clearly far too superior for any man to argue. Please, just let me live in peace and not be bullied by you anymore!!! Oh God, please!

You may call me a preteen (which is false) but at least I know how to put a fucking period in a paragraph. #LearnEngrishKTroll?

:) See that ":B".

You're Zarabyte.

We where planning on making the script open source after we started programming a bit more complex of a script.

Like a week ago.

All who bought the script (except zara, he's a whore) will get updates on it.

And if the script is so much trash, why is it the framework of several of SynLan Tech's sites all pulling in over 2k a month?

I think you're just mad because you thought that we'd talor your every whim when you bought a 5 dollar script.

Go back to your mothers basement zara (You've yet to address that one my good sir. You DO live in your mothers basement.)

Nice mugshot/mullet Matthew.

Nice mugshot/mullet Matthew. That mugshot, by the way, comes from his police report where he pulled a fucking gun on his date, Rhonda.

**mod\_security** - July 11, 2012, 10:59 pm

Looks like OP Got banned eh? It appears that no one cares about this script since i found this way on page 3 of this forum LOL. OP I'd pull a gun on you to if you ever had the man parts to come to my address.

how can i log in to admin panel. what is username and password

**mod\_security** - July 12, 2012, 2:06 am

(Jul 11, 2012 11:57 PM)mrlinh87 Wrote: [\[CITE\]](#) how can i log in to admin panel. what is username and password

Login to phpmyadmin and change the admin password the password needs to be a SHA1 so you will need to generate an SHA1 password and then replace the current password with your SHA1 since theses fools never told anyone what the password is LOL you might wanna change the admin name as well using the default name will make it a little easy to guess the user name.

**mrlinh87** - July 17, 2012, 9:22 pm

i can't find where to change the admin password in phpmyadmin.

How can i do it.could you help me with picture.

**DaveA92** - October 21, 2012, 2:55 pm

Can anyone share the latest copy of GidePT 2.2.2 as I o to the site and it asks for \$49.95!

**Bluey** - October 21, 2012, 3:48 pm

Your hosting's latest payment needs to be paid for us to access this.

**Demogorgon** - December 17, 2012, 9:10 am

Can you reupload ? Thanks in advance !

**easytime** - April 27, 2014, 5:50 pm
