Free C# Themes! Genesis and Elite

Well got bored so I decided to release as well as rerelease. my latest C# theme(s). Please note They are incomplete (especially the elite theme (which is just a rerelease) but are well designed and coded, IMO. However they do come with most controls and are open source. If you want to skip my boring post and the screen-shots, head to the bottom of the post to get the link for the code (Themebase Included in theme code).

Anyways there are two themes: Elite [Dark] and Genesis [Lite] Both are based off of Themebase 1.54 by Aeonhack:

Genesis has more controls and a-lot more options, I mean a-lot more options:

Here are some screen-shots so you get a feel for them:

Spoiler ([Click to View](#))

[Elite | Dark Theme]:

Note: Click [here](#) and [here](#) for sample programs running the Elite Theme (HWID and the Full Fledged TCP chat system go ahead use it!).

[Genesis | Lite Theme]:

Some notes for the Genesis theme though about the features:

Quote:When you use the theme, just go to the properties panel in order to:

Change color of the controls:

The main forms bar color

To control stripes or not

Main forms option for the icon and text location

Cue text

Color of Checkboxes and stripes

Progressbar stripes and colour

No properties in elite theme though.

A simple guide to using these themes is to follow these steps:

Quote:Create a new C# winforms project
Make sure this is .NET 3.5 or 4.0 Project
Add a new blank class
Remove existing code
And add in code for theme instead
Build the project once with f5 or f6.
Look in toolbox for new controls and theme!

Finally Last Thing:

Quote:Themebase belongs and is coded by Aeonhack on HF
This code is by me (The Theme portion)
You may not sell charge or claim these themes for yourself
When using theme you must mention me in credits somewhere.
Finally have fun!
I DO NOT AND WILL NOT OFFER SUPPORT. These themes come as is.
And have no planned updates in the future as i work on other projects

You can get the Themes from here:

[Elite Dark Theme](#)
[Genesis Light Theme](#)

Note: If this is awesome/helpful cool, don't just download, say something.
Also the Elite Theme is a re-release, for a dark theme along with a light.

Very nice, I like them. Good job on the bright theme too, I know how hard those are to do.

These look really good, thanks. I will try them out when I get on my computer. I know this is probably a stupid question but do these work on WPFs? I've never worked with custom themes before, sorry.

I can't get it to work for some reason. There's like 200 errors. When I use a theme by Aeonhack it works though so I'm confused.

A coder in VB.NET

He's on HF and he makes wonderful themes.

Bloxri - July 10, 2012, 4:54 pm

I can't get this theme to work with MDI parents and child's ><

Great theme overall.

Great theme overall. 1st, thanks, second yea, it wasn't designed for that >.> just as a theme for a standalone app.

Bloxri - July 10, 2012, 7:21 pm

Alright well thanks for it though :D

Sorry

This is with the light theme - <https://i.imgur.com/HU5iR.png>

I'm using themebase 1.5.4 I'm confused why it doesn't work.

The Elite Noob - July 11, 2012, 4:47 am

I see, remove themebase, my theme preincludes it.

Ghoster - July 11, 2012, 5:16 am

This is pretty cool. I had to change something to make it work, but it's nice. Thanks.

Ah, I was wondering why it said Aeonhack in the comments :P. I just have one last error :/ sorry, I

know that you're releasing it for free, but I'm really lost in this whole GDI part.

Code - Error 3 The name 'Strings' does not exist in the current context C:\Users\Stephen\AppData\Local\Temporary Projects\WindowsFormsApplication1\Theme.cs 4382 17 WindowsFormsApplication1
I don't want to change stuff and fuck up the theme :/

Oh, here's the problem:

using Microsoft.VisualBasic;

for this to work, you need to reference the dll file;

Quote:Add a Reference to the Visual Basic .NET Run-Time Library

In a Visual C# application, click the Project menu, and then click Add Reference.

In the Component Name list, click Microsoft Visual Basic .NET Runtime to add Microsoft.VisualBasic.dll.

This should remove the strings error.

I'll add this to the top of the pastebin for anyone else.

themes are C#, not VB, I'm not a VB coder and I'll leave that to mava. So thats why I release them in
the C# section, I don't know VB.NET so I can't really support or help with any conversions either.
