Thread: [TOR Security?](#)

iNViSi8LE - July 11, 2012, 5:18 pm

I have heard its hard to track when u are inside tor network.
If i am hacking website DB / Defasing it with TOR is it safe ?

iFr0zen - July 11, 2012, 5:45 pm

Woops my bad, didn't mean to post that.

TheW3bster - July 11, 2012, 5:47 pm

TOR is one of the safest things around. It also is used for illegal browsing. So i say it's pretty secure xD

I think you should click the link in my signature, but yes TOR browsing is very safe and i'd recommend it.

Pidgey - July 11, 2012, 5:54 pm

TOR isn't supposed to be mentioned on HackForums, you're breaking one of the rules OP.

TheW3bster - July 11, 2012, 6:05 pm

Please show me where that rule is

Spoiler ([Click to View](#))

VipVince - July 11, 2012, 6:21 pm

Yeah its pretty secure. You should learn abit it before entering the onion.

KernelMode - July 11, 2012, 6:22 pm

Incorrect.

You can discuss tor. Just not the deepweb.

My bad, I just remembered that. Sorry OP.

inurl - July 12, 2012, 5:02 am

Yes tor is absolutly secure, He goes frew a lot of server and makes you slow down , The only vuln

he have is that the last server can read all the stuffs who go threw it with a sniffer....

The solution is easy use a ssl and they will not be able to read any info who go threw theme.

Any more question about Tor. :P

TheBlackSun - July 12, 2012, 6:00 am

Tor IS secure but you shouldn't hack with it.

Always test your anonymity here:

<http://www.dnsleaktest.com/>

Somewhere in tor's credit, there is a line that says "TOR is an experiment. It is not true anonymity".

Also, anyone can set up a tor node and it is said that there are many tor nodes owned by the feds. It's a fed honeypot.

I personally wouldn't hack with tor.

Take no risks, trust no one, because it is the paranoid who survive.

Austerity - July 12, 2012, 7:33 am

It's from a relatively trustworthy company. If you still suspect them, scan the website with URLVoid (check re-scan if out-dated), and scan the file with VirusTotal (re-upload if out-of-date) and Comodo Instant Malware Analysis.

.... I don't get it?... How is the "Tor Project" a company in the first place?
