Thread: [\(TUT\) HOW TO CLONE A WEBSITE ON MAC \(ANY WEBSITE\) \(TUT\)](#)

a1eks_ - July 12, 2012, 10:47 am

Hello today i will show you how to clone a Website for Mac Os X

1)Go on this page :

<http://www.sitesucker.us/mac/mac.html>

2) Click on (Download) : http://www.sitesucker.us/archive/2.x/2.3.x/2.3.3/SiteSucker_2.3.3.dmg

3) Type in Website and enjoy :)

xSystemNightmare - July 12, 2012, 11:41 am

Can somebody please confirm this is working and is not a Rat/Keylogger etc I dont see any virus scan

Hannibal Lecter - July 12, 2012, 11:45 am

- 1.This is for Mac/Iphone
- 2.Not related to hacking.
- 3.PageSucker is for Windows

DaKnOb - July 12, 2012, 12:41 pm

I am using this and it is totally clean. The only problem it that it will take a lot since it has to download the entire website. Took more than 7 hours to obtain apple.com :P

__init__ - July 12, 2012, 12:44 pm

Nice share for mac users I guess ;)

There is one version for Windows 7/XP/Vista its called (HTTrack Website Copier) Link :
<http://www.httrack.com/>

Download Link :<http://www.httrack.com/page/2/>

?

Dantesco - July 20, 2012, 7:42 am

HTTrack Website Copier works like a charm.
