bfreakz - July 13, 2012, 6:53 am

I downloaded a file and it did not want to execute. It said it was missing a .dll so I decided to go scan it as I was suspicious

Gave me the following on 5 AVs: Trojan-Dropper.Win32.Mudrop

What now guys?

brother22 - July 13, 2012, 6:54 am

Malware bytez my child run a full scan dc frum interwebz

sonex - July 13, 2012, 6:54 am

Try to delete it with whatever software you scanned it with. I personally use kaspersky and malwarebytes, I guess I'm pretty clean :D

bfreakz - July 13, 2012, 6:56 am

Did a root scan with TDSSKiller found nothing, doing a GMER now.
Already did a malwarebytes one aswell.

Anything else I can do? i really need to make sure. I scanned it with virustotal.

Result - July 13, 2012, 6:58 am

Just do a system restore for the day BEFORE you downloaded the file.

brother22 - July 13, 2012, 6:58 am

Uhhh run the exe in sandbox or vmware if something drops look for that on your real comp

bfreakz - July 13, 2012, 6:58 am

The exe doesnt want to start at all, it just errors out.

brother22 - July 13, 2012, 6:59 am

Malware can infect sys restore check points o.O... Besides no need to sys restore

If exe doesnt run your fine, ifits a fake error your not.have you tried to sandbox it?

StrazaH - July 13, 2012, 7:09 am

Hi,

Download [Malware-Bytes Anti-Malware](#) and run a quick system scan.

Furthermore,

Please visit [here](#) and gather the requested logs, then create a thread and post them [here](#).

Additionally, I will PM you to offer my own help.

Thanks,

Malware bytes to the rescue :) And scan with your AV!

bfreakz - *July 13, 2012, 7:24 am*

No longer need any help, ty everyone.
