Thread: [Twitter Mass Retweet](#)

Kirko Bangz - July 13, 2012, 8:59 pm

Here I have a twitter mass retweet script. Some bastard on HF that I trusted took the script so he can fix it for me then he started his own service of selling twitter retweets/ favorites. I am so angry right now. But anyways, Shit happens and I don't need to let it go to my head. I have a twitter (follow script) where you put in a list of accounts and make it follow a main account.

Username1:password1

Username2:password2

-

I have the "follow" script working to make over 100 ppl follow you. But what I need is this retweet script to work so u can get 100+ retweets on anything. Below I'm going to share the code.

Once someone fixes this code, I'm also going to post the favorite code to make accounts "favorite" your tweet and I will also post the "follow" script including some dummy accounts.

Anyways, Here's the script. And I'll give an award of over 2,000+ twitter account to whoever can fix it.

```
Code <?php
if(!$_POST[perfis]) {
?>
<html>
<title><b style="color:black;background-color:#ffff66">MassRetweet</b></title>
<head>
<style type="text/css">
    #btn
    {
        background: transparent;
        border: solid thin;
        -moz-border-radius: 3px;
        -webkit-border-radius: 3px;
        border-radius: 3px;
        font-family: Verdana;
        width: 300px;
    }
    #follow
    {
        background: transparent;
        border: solid thin;
        -moz-border-radius: 3px;
        -webkit-border-radius: 3px;
        border-radius: 3px;
```

```

        font-family: Verdana;
    }
    textarea
    {
        width: 400px;
        height: 320px;
    }
    .work
    {
        font-weight: bold;
        color: green;
    }
    .notwork
    {
        font-weight: bold;
        color: red;
    }
    a
    {
        color: #000000;
        font-weight: bold;
    }
</style>
<script type="text/javascript">
    function countFakes()
    {
        document.getElementById("count").innerHTML =
            document.getElementById("perfis").value.split("\n").length;
    }
</script>
</head>
<center>
<form method="POST" action="">
    <textarea name="perfis" id="perfis" onkeydown="countFakes()"
onchange="countFakes()"></textarea><br />
    <font id="count" style="font-weight: bold;">0</font>&nbsp;Perfis inseridos.<br /><br />

$response = curl_exec($ch);
return $response; // precisa aplicar uma reg x pra ele retornar true ou false, dependendo do
sucesso da ação
```

```

}

$login = $_POST[perfis];
$logins = explode("\n", $login);
foreach ($logins as $perfil)
{
    $data = explode(":", $perfil);
    $usuario = trim($data[0]);
    $senha = trim($data[1]);
    $user = login($usuario, $senha);
    if(!preg_match("/auth/", $user)) {
        echo "<center><font color='red'>".$usuario." Wrong Password!</font><br>";
    } else {

        echo "<center><b><font color='green'>".$usuario." </font>Deu Retweet!</b><br>";
        Unfollow($user, $_POST['id']);

    }
    flush();
    ob_flush();
    sleep(1);
}

}
?>

```

Thanks so much I appreciate it.
