Thread: [\[Release\] Quantum Keylogger \[Version 1.0\] 100% FUD, New, Actually Works, Etc.](#)

Vigor - February 12, 2010, 12:33 pm

[img]http://i50.[censored].com/1ypn3k.jpg[/img]

[img]http://i49.[censored].com/20124g5.jpg[/img]

[img]http://i47.[censored].com/259hjdj.jpg[/img]

The main goal in this keylogger was to provide a simple and stable way to record a person's keystrokes, while at the same time remain elegant. The main menu, as you can see in the picture, was made using AS2 in Adobe Flash, to keep a cool, one of a kind, GUI.

I chose to use an FTP Log Sending System instead of using GMail because of how unorganized GMail can be. I made sure the the program will make a new folder for each computer it is ran on, so everything will be extremely organized on the FTP. I hate cluttered spaces, if you couldn't tell.

Yet another way to make sure there isn't any clutter and less used space on your FTP server is that it will not upload images to it. Aww, no images? Wrong. It uses [censored] to upload images, and appends the link to the latest log that is uploaded to the FTP.

Feature List: [\(Click to View\)](#)FTP Log Sending

- Cool Looking Logs

- Download and Execute File Option

- Taking Pictures With Log Send

- Doesn't waste space uploading to ftp, upload to [censored] and gives link.

- Add To Startup

- Disable Task Manager

- Ability to Change Assembly Info

- Option To Change Icon

- File Pumping

- Logs All Numbers

- Logs All Regular Letters

- Uses real backspaces.

- Automatically Capitalized Keys when Shift/Caps Lock is Down

- Logs Keys Like ~!@#%#@#\$^@&(), etc

- Adds To Startup

- Change Servers Name

- Tons of Antis

- Custom Log Interval

I wanted a unique and cool looking log style, instead of the gross, bland text documents you always see.

[img]http://i47.[censored].com/25at9g3.jpg[/img]

You choose the log interval, but to keep stability, I made sure to not allow intervals lower then 20 minutes. Sorry if this is an inconvenience to people, but the headache I'd get from noobs complaining about their ftp getting spammed and not getting very much text in the log isn't worth it.

[img]http://i48.[censored].com/1s0ehz.jpg[/img]

It automatically copies itself to the AppData path and renames itself to iexplorer.exe so it won't get removed from the system if it was added to startup.

[img]http://i48.[censored].com/250hw69.jpg[/img]

System Requirements: .Net Framework, and an FTP account for the logs.

How To Get: This keylogger is public and free. You have to meet a certain level in posts on this forum to get it. It isn't anything personal if you don't get it, so just post more, etc, and you'll get it. This is to keep the file FUD for a much longer period of time.

I'm thinking around 250+ posts.

edoroom - February 12, 2010, 12:45 pm

Seems like a great keylogger :)

but so bad that you and people like you dont let new members chance and want only from 300 posts :(

i know you want to disable newbie but let me tell you that you was too newbie when you start here.

eNigMa7 - February 12, 2010, 12:47 pm

300.. That really sucks, I'm dying for a good keylogger and this looks absolutely amazing :) I could test it for you? Haha yeah I know, it's a very long shot. I wish I had the post requirement :[

Awesome keylogger by the looks of it, very stylish, looks fantastic. Congrats on the release [:

Shinkirou - February 12, 2010, 12:49 pm

Shoo, that's one of the best lookin GUI's I've seen in a while, I don't have any use for this but I couldn't resist commenting on the GUI ?.

MySocksAreWet - February 12, 2010, 12:52 pm

I would like this program....

Also, this is great! What did you code it in?
Looks very proffesional.

Yeah, thanks. It was made in Adobe Flash, and I used my prior VB .NET > Flash Interop skills to allow them to be interacted. It was fun, but having both of them open was a load on my PC =(.

@Enigma and edoroom: Yeah, sorry guys. I lowered it to 250 posts if that matters to you =(I can't lower it to much or it won't be FUD, and it'll lose its value. Sorry, again.

eNigMa7 - February 12, 2010, 1:01 pm

Yeah I don't blame you, keep it around 250. Don't want it to go bad! =D

If it's still FUD and running fine when I have 250 posts I will take a crack at it ;)

Vigor - February 12, 2010, 1:28 pm

Yeah enigma. Sounds good.

@MySocksAreWet, just sent you it, sorry for the wait =D

Upload's logs to a public [censored] link?

(Feb 12, 2010 04:38 PM)iRtehLeet™ Wrote: [\[CITE\]](#) Upload's logs to a public [censored] link?

Why would it do that?

It upoads screenshots to a public [censored] link. For all [censored] knows, it's just someone taking a screenshot. It adds this link to a log in your FTP.

Yeah but public means if someone comes across your picture on [censored] they also have your

logs. ?

Not sure I get what you mean lol

See, it records all keys, and uploads the keys in a certain layout to the ftp. I doesn't take a pic of these lol.

If you have the screenshot option on then it'll take a pic of their screen and up it to [censored] and then add the link to it to the log. I guess if someone stumbles across this picture they get that persons screen, but not like there's going to be much info on the screenshot lol. ?

Super_Mario - February 12, 2010, 4:01 pm

Arf, around 250+ posts :/

Thanks anyways , great work ;)

DvS - February 12, 2010, 4:04 pm

Damn, 250 posts, good choice.

Will be a forum post wh0re.

G/L

btw, only reason why i want it , is to see if iCrypt, can crypt the server, and ACTUALLY work, i tested lots of keyloggers in the site with iCrypt, so far none worked!
