Thread: [Help linking front and back end](#)

starvinmarvin1 - July 17, 2012, 1:58 pm

Hey guys,

I am a little confused since this is my first time attempting this.

Here is the program specifications:

<https://hackforums.net/showthread.php?tid=2634967>

Now I had to design a GUI that functions as a main menu for that application.

Is there a way to link the two or is a lot of the code going to be re-written to comply with the Gui?

I hope this isn't too confusing.

Not sure if this is exactly what you wanted, but here's a thread on Dream In Code which uses a GUI class that interacts with another class, maybe it can help you out a bit. [Here ya go!](#)

By the time I saw this I already worked most of it out.

But this would've definitely helped so thanks your input none the less.
