my old thread was deleted so I created this one :(

hope this one will not be deleted too !

I got a lot of request on this shi*ty little adf.ly bot in the past (over 200 downloads wow !) ... :) and btw the source from 1.0 is free : [1.0 source](#) (2.0 source soon) 'check the replies for my name maybe you'll see there a link for the 2.0 source :D'

==

I update the bot with some little extra's like :

- HTTPWebRequest Visit Method with Proxies (doesn't work with adf.ly or youtube) [but with normal ip visit counter] // it's faster than the browser method :P

- Bug fixes (like clicking the skip ad button & adding to log if proxy offline [will not longer minize to a tray if click on the minize button ... I found that fking annoying])

- now you can see what adf.ly does (browser show method) re-added

- quick proxy paste ! Usefull if you copy proxies from a site into your clipboard just paste them into the bot (you can choose between : every new line a proxy or after every space a proxy)

- User Agent Changer ! change between mobile (iphone & ipad) & chrome user agent (default) // Browser & HTTPWebrequest :)

- WORKS FINE WITH FAKE YOUTUBE CLICKS !! :P

==

IMPORTANT : Adf.ly refresh their views/clicks every 8-24h so you won't the clicks right after click start :)

Website_Hitincreaser - July 24, 2012, 1:23 pm

This does not work. I have tried to open the source in vb 2010 and vb 2008 but will show me the code but not the design

Also have tested the bot out and a pop up keeps cumming up saying removing your browsing history and checking your internet browser over and over and if u have it on loop in the setting it will crash because there are so many pop ups its un real. I have added a hit counter to a page and say i didn't get no views.

Thank to the coder / upload tho for trying.

NYWAYS, im pretty new to Visual basic and im creating an application for a cheating client @ this voting thing i use. And I'm not really interested in learning visual basic at the moment, and I was

wondering if someone could give me some code to open a file, and sort the file on new line. Its a list of proxies, and then a statement that when my buttons clicked it performs this function, and updates it with the amount of clicked (the index) of the array of proxies. I'd be extremely grateful, and if this was python or php this is a no brainer, but I for the life of me dont understand this programming language

So you mean, if i made like 60 clicks, then it will really come after several hours? At least part of them.

Thanks for testing it ;)

The proxy grabber will grab always the same proxys thats the problem so I recommend that you'll use something else to get fresh proxys :P

1n9i9c7om - August 9, 2012, 2:18 pm

It only count hits from 'Browser', not from the Webrquest. But it works - Thanks :D giving rep

Speedforyou - August 9, 2012, 2:29 pm

this doesnt work for me FTW.
can you do a video??

1n9i9c7om - August 9, 2012, 2:33 pm

Well, it said 437 Clicks, on adf.ly I have 40. Maybe my proxys are bad, maybe it's the bot...

But: Add Links

Add Proxys Useragent => Chrome (an automatic Useragent-Changer would be nice)
'Wait 18 seconds' (set the intervall to 18 seconds, don't waste your time :P) Choose Browser, don't use Webrequest (webrequest isn't working for me)

Click start

* Let the bot run over night and look about 6 hours later.

So it works for me :D

Ch@m3le0n - August 10, 2012, 4:48 am

I have it up and running, with the same settings as The-Tea. I started with the proxy list that comes with the program, but have other lists as well if it turns out it works. It would be nice to implement a random time between the visits, like random from 16-22 seconds so it doesn't look as much as a

robot.

After about 50 clicks my firewall alarmed that adf.low.exe was trying to receive a connection from a british IP belonging to btcentral.com. I suggest people to have their shields up until we have it totally confirmed safe.

But I haven't seen anything else suspicious about the program, but that.

EDIT: And for the people wondering about the clearing of internet history window that pops up. The program must do that to delete any cookie each visit sets on the computer, otherwise the targeted site wouldn't be fooled.

Also, here's a recent scan:

[\[img\]http://elementscanner.com/image.php?ID=14e0962c1722daaf9594c7c42fbe31fc\[/img\]](http://elementscanner.com/image.php?ID=14e0962c1722daaf9594c7c42fbe31fc)

UPDATE: I dunno. I do not receive any hits at all, with any settings. I know that adfly takes long time before updating, but not my private domain gets any hits either. My outgoing traffic goes to the proxies as it should, but it is like the proxies then not reach the targeted site. Strange thing. Should be easy to fix though for some handy coder.

bro adf.low will simply visit the site via proxy with chrome user agent on a vb.net web browser control ... that's all ... try version 2.0 and you'll see what it does ... you'll need a strong & working proxy list and it works ... I received some proxy traffic on my adfly acc ... I used 130 proxies 80-110 working ones and I received about 70 visits ... so say whatever you want ... It's open source (1.0) if you don't trust me take a look at the source ...

Pretty intresting that in the thread you are posting this Virusscan : <https://puu.sh/1idJr>

But when i scan it again i get this one : <https://puu.sh/1idKs>

Also the filesize is a different one (real :242.5 KB | in your (fake)-scan :233.0 KB)

AND ITS ALSO INTRESTING WHY YOU DELETED MY POST WHEN I POSTED THE REAL VT-SCAN.

3hours, 48 minutes, 29,2 seconds.

?

Spoiler ([Click to View](#))

I bet nobody can really answer your question.

A 3 year old link is dead?

No way.

wow thank you for your interest. Sadly this whole thread and bot is almost 5 years old now ... I probably still have it on one of my harddrives, but it won't work anyway. If you do a bit research you can program or get the same or maybe even an actually working version. I'm sorry, but thank you for your interest.
