Thread: [Slave says its virus WTF even crypted](#)

bill0riley - July 22, 2012, 7:01 am

Hey guys-.-

i have crypted my server its 3/37 and i know hes using avast
i sent him but he said its virus i wont open it -.- ?

i scanned it and only kaspersky+eset+gfi scan detects my server...

BTW <http://www.metascan-online.com> scanned it here and i cant seem to find avast in the list--

whats wrong man.

i did the same 4days ago and then it was working now he says
its a virus.

matej203 - July 22, 2012, 7:08 am

maybe he go to virustotal or something like that and scanned it

bill0riley - July 22, 2012, 7:10 am

na, hes too dumb for things like that ;D

i am installing myself avast to see if its really detecting my crypted server-.-
wow that rly pissing me off. i had two chances first time my damn rat wasnt working
and now since its working he says its virus lol ;D

AND YES ITS DETECTED OMG even crypted-.-

bill0riley - July 22, 2012, 7:43 am

shinecrypter and fibre crypter which i bought here.. both detected by avast-.-

SpaceBaby - July 22, 2012, 7:47 am

It's because AV proactives are intense nowadays. I had a completely FUD server, but AVG still detects it. If you raw server can't by-pass it, then neither can the crypter. I'm kinda pissed off about this myself. Apparently install a loader first, and then using the 'download and execute' command is the way to get past it.

Laravel - July 22, 2012, 7:50 am

Avast warns you everytime he see a new file which is not know/never seen by the community...
You can crypt your file with every crypter you want, Avast will always warn you about "this file seems to be new"...

Prince™ - July 22, 2012, 9:16 am

FUD might have got ended. Find a way to re-FUD it again.

.?cb. - July 22, 2012, 12:23 pm

That is proactive of the av, it is hard to bypass.
